1986 Subscription £165.00 (\$319.00) Rest of World £182.00
RSC Members £33.00

Editor: Mrs Judith Brew
U.S. Associate Editor: Dr J M Harnly (Beltsville, MD, USA)

Aims and Scope

Journal of Analytical Atomic Spectrometry (JAAS) is a new international journal, launched in February 1986, which contains original research papers, short papers, communications and letters concerned with the development and analytical application of atomic spectrometric techniques. JAAS is published bimonthly and includes comprehensive reviews on specific topics, general information and news of interest to analytical atomic spectroscopists, including information on forthcoming conferences and book reviews. Special issues of JAAS will be published, devoted to subjects highlighted by particular symposia. Also included in JAAS are the literature reviews previously covered in *Annual Reports on Analytical Atomic Spectroscopy*.

Published by the Royal Society of Chemistry in London, JAAS has a style and format similar to that of the well-established journal *The Analyst*. JAAS provides an improved publication service to support the growing research efforts in, and applications of, atomic spectrometric techniques.

Why is JAAS Unique?

A special feature of JAAS is the inclusion of *Annual Reports on Analytical Atomic Spectroscopy (ARAAS)*, previously published by the RSC in book form

The inclusion of the ARAAS reviews (which are called Atomic Spectrometry Updates) makes JAAS significantly different from all other journals in the field. Each bimonthly issue of JAAS contains a major review covering a period of one year. Successive issues of JAAS will review the whole range of topics previously covered by ARAAS to provide a unique appreciation of developments in analytical atomic spectrometry. The reviews will be on: Environmental and Agricultural Materials; Clinical and Food Materials; Instrumentation; Industrial Chemicals and Metals; Atomisation and Excitation; Minerals and Refractories.

JAAS will be invaluable to the practical user of analytical instrumentation and practising chemist. It will serve as a vehicle to assist the transfer of research ideas from the research laboratory into the routine analytical laboratory. Given the pace of developments in analytical atomic spectrometry JAAS will act as a vital communication medium between research scientists. The combination of primary journal material with ARAAS reviews will help to establish JAAS as a unique publication that should become essential reading for workers in the field.
