NEW ANALYTICAL BOOKS . . .

Supercritical Fluid Chromatography

Series: RSC Chromatography Monographs

The first title in the new RSC Chromatography Monographs series, is *Supercritical Fluid Chromatography* (SFC).

SFC is the current focus of attention in the chromatography world. In recent years a number of commercial systems have become available and considerable interest has been roused in the technique. SFC promises to revolutionise analytical procedures in the petroleum, pharmaceutical, food, agrochemical and biotechnology industries, and this new publication will provide practicing chromatographers in both industry and academia, with a perspective on its principles, practice and potential applications.

Supercritical Fluid Chromatography is written by a team of acknowledged experts in the field.

Analytical Applications of Spectroscopy

This new book provides a 'State-of-the-Art' review of the applications of the major spectroscopic techniques and will prove invaluable to researchers involved in this form of analysis.

The book provides wide-ranging coverage of recent developments in analytical spectroscopy, and particularly the common themes of chromatography – spectroscopy combinations, Fourier transform methods and data handling techniques. Each section includes reviews of key areas of current research, written by spectroscopists who have made major contributions in their respective disciplines, as well as short reports of new developments in these fields. These common themes have played an increasingly important part in recent advances in spectroscopic techniques and emphasise the multidisciplinary approach of present research.
