RSC JOURNALS

Use of Structure Diagrams produced with ChemDraw

The Society's Publications Production Department is now using the computer program ChemDraw to produce chemical structure diagrams, reaction schemes *etc.* for publication in the primary journals. Authors who use this program to produce diagrams for inclusion in submitted manuscripts are asked to take note of the settings given below, which are those employed by RSC production staff. It may be possible to make direct use of diagrams prepared according to these standards and submitted to us as laser printer output on good quality white paper. Single column (8.3 × 22.8 cm) layout is preferred, for flexibility; however, double column (17.1 × 22.8 cm) is acceptable.

ChemDraw settings:

- fixed length: 18 pt
- line width: 1 pt
- bold width: 2.5 pt
- hash spacing: 2.5 pt
- bond spacing: 20% of length
- font: Helvetica 12 pt
- single width bold and dashed lines for stereochemistry
- page setup 60% for preparation of drawing and printing.

RISK ASSESSMENT OF CHEMICALS IN THE ENVIRONMENT

Edited by M. L. Richardson, *Chemical Information Group, RSC*

Risk assessment is a multidisciplinary subject with worldwide consequences and this important new book outlines the basic principles involved.

Risk Assessment of Chemicals in the Environment is based on the Third FECS Conference on Chemistry and the Environment and provides both up-to-date information and a forum for discussion on the subject.

With worldwide contributions from eminent, internationally known authors, the book covers both chemical and radioactive risk assessment, predictive techniques, risk acceptance (including prediction and reality on isolated and global bases), approaches to the control of chemical disasters and much more... It is divided into four sections as follows: Introduction and Overview;

Contribution of Toxicology to Risk Assessment; Incidental Emissions – Air and Water; and Intentional Emissions.

Also included is a glossary of terms, useful addresses and a subject index.

This book will be of great value to scientists and other professionals, whether experts or novices, involved in any aspect of the safety of chemicals in the environment.

EXPERIMENTAL TOXICOLOGY

The Basic Issues

Edited by Diana Anderson, *Head of Genetic and Reproductive Toxicology at British Industrial Biological Research Association* and D. M. Conning, *Director-General of the British Nutrition Foundation*

This important new book is aimed at toxicologists in general and addresses the basic issues concerned with the practice of experimental toxicology.

Principles and methods are discussed in detail, covering experimental design, biochemical issues, animal husbandry, species differences, immunological issues, carcinogenesis, reproductive approaches, statistics, genetics, some *in vitro* and molecular approaches, plus risk assessment, information resources, aspects of legislation, good laboratory practice and laboratory design.

Experimental Toxicology will be of great interest to all those practising in the field, as well as to those who wish to gain a basic understanding of what toxicology is all about. It will also be useful to specialists in a other disciplines, who need an introduction to this area.
