Industrial Applications of Surfactants II

Edited by:
D.R. Karsa, *Harcros Chemicals UK Limited*

Industrial Applications of Surfactants II contains papers describing a wide range of chemical species not featured in the previous edition. Included are acetylenic glycols and derivatives, alkanolamides, phosphate esters, amine oxides, sulphosuccinates, ether carboxylates, naphthalene derivatives and others.

Surfactant technology continues to be an area for innovation, and areas such as biosurfactants, the formation and application of ultra-thin films, polymeric surfactants and the application of cationics as phase transfer catalysts are featured in this monograph.

Brief Contents:

Catalysis Vol. 8

Senior Reporters:
G.C. Bond, *Brunel University* and
G. Webb, *University of Glasgow*

Catalysis Volume 8 provides a review of recent literature.

Brief Contents:
EXAFs in the Study of Catalysts; Theoretical Approaches to the Study of Catalysed Reactions; Computational and Theoretical Studies on Zeolites; Catalysis by Solid Acids and Bases; Complete Catalytic Oxidation of Volatile Organics.

Early Developments in Radiation Chemistry

Edited by:
J. Kroh, *Institute of Radiation Chemistry*
Technical University, Łódź, Poland

This unique book is written by a wide circle of distinguished radiation chemists. It bridges the gap between the beginners of radiation chemistry and contemporary modern research. *Early Developments in Radiation Chemistry* will prove fascinating reading for radiation physicists, radiobiologists, and photochemists, as well as for postgraduate students and science historians. It will also be of use as a reference book for students and young scientists.

Food Colloids

Edited by:
Rod Bee, *Unilever Research* and Jim Mingins and
Peter Richmond, *AFRC Institute of Food Research*

Food Colloids reviews key technical developments and airs outstanding issues in the colloid science of foodstuffs. It provides the latest information on fundamental and applied aspects of aeration, emulsions and solid dispersions pertinent to foods and draws on many relevant, though not traditionally associated, research areas.

The book is divided into four sections, the first dealing with aeration and both solid and liquid foams. The second is devoted to molecular issues, while the third and fourth cover liquid and solid dispersions.
