ROYAL SOCIETY OF CHEMISTRY

NEW PUBLICATIONS

Guidance on Laboratory Fume Cupboards

The need for authoritative yet practical guidance for users of laboratory fume cupboards has become urgent since the Control of Substances Hazardous to Health (COSHH) Regulations came into force. This booklet provides such guidance. It will also be of interest to those who design, manufacture or install fume cupboards.

Topics covered include:

- an introduction to the subject
- factors affecting the performance of fume cupboard systems (the working chamber, the extract system, the laboratory, the air supply, the system of work)
- filtered extract fume cupboards
- materials of construction
- performance testing (including user tests)
- the legal position in the United Kingdom
- a review of the literature on factors affecting the efficiency of fume cupboard systems
- references and suggestions for further reading.

This publication complements the Society's other guidance booklets "COSHH in Laboratories" and "Safe Practices in Chemical Laboratories". It was prepared by an Expert Working Party of the Society's Health, Safety and Environment Committee which was also responsible for the companion booklets.

Softcover Approx 35 pages

Information Services

To Order, Please write to the: Royal Society of Chemistry, Turpin Transactions Ltd, Blackhorse Road, Letchworth, Herts SG6 1HN, UK, or telephone (0462) 672555 quoting your credit card details. We can now accept Access/Visa/MasterCard/Eurocard.

Turpin Transactions Ltd, distributors, is wholly owned by the Royal Society of Chemistry.

For further information, please write to the: Royal Society of Chemistry, Sales and Promotion Department, Thomas Graham House, Science Park, Milton Road, Cambridge CB4 4WF, UK.

RSC Members should order from: The Membership Affairs Department at the Cambridge address above.

CIBA FOUNDATION SYMPOSIUM BURSARIES

Aim: To enable young scientists to attend Ciba Foundation symposia and, immediately following the meeting, spend 4 weeks in the laboratory of one of the symposium participants.

The bursary will cover—

- travel expenses
- board and lodging for the duration of the bursary

Qualifications: Applicants (of any nationality) must be aged between 23–35 years on the closing date for application, and actively engaged in research on the topic covered by the symposium.

Topic:

SECONDARY METABOLITES: THEIR FUNCTION AND EVOLUTION, (17–20 February 1992)

Applications: In writing, addressed to:

Ms S Venables, The Ciba Foundation, 41 Portland Place, London W1N 4BN.

including the following information:

- Full name, address and date of birth
- Qualifications and short resumé of further education
- Career history, including full list of publications
- Details of current research and aims of future career
- Names and addresses of two referees

Closing Date for Applications: 20 September 1991

Long-term Neurotoxic Effects of Paint Solvents

This report was prepared by a specialist committee of the RSC for the Commission of the European Communities, on what has become a contentious issue in some quarters. Some believe that long-term exposure to paint solvents may induce a chronic toxic encephalopathy that may be disabling. Others have argued that the evidence for this is poor.

In this report, the various components of oil-based decorative paints are described, as are studies that have been made on the neurotoxicity of the individual solvents. The relative advantages and disadvantages of oil-based and water-based paints are described. The main section of the report relates to epidemiological studies on painters themselves and also notes the problems that have become apparent over time in establishing an adequate methodology for conducting such studies. The report ends by drawing conclusions and making recommendations.

The Periodic Table of the Elements

The Royal Society of Chemistry has produced a colourful wall chart measuring 125cm X 75cm covering the first 105 elements as they exist today. Each group is pictured against the same tinted background and each element, where possible, is photographed in colour and discussed with regard to its position in the hierarchy of matter.

Additional information for each element includes chemical symbol, atomic number, atomic mass, and number of electrons. This chart is particularly useful for both teachers and students and would make a worthwhile addition to any establishment.

(1986) Price £4.50

Plus VAT in UK only.
