Chemical Communications – 1994

From the beginning of 1994, each communication in *Chemical Communications* will start on a fresh right-hand page, and will be limited to two pages in length. The vast majority of communications already fall within this two-page limit. Authors will be asked to shorten communications that are longer than two pages, and should bear in mind our requirements for brevity in drafting their manuscript.

In particular:

- Extensive historical introduction and associated references should not be included; all that is needed is brief information to put the work in context.
- Duplication of results in the text and Tables and/or Figures must be avoided.
- Tables and Figures should be included only if their content is essential; more extensive tabulation of data and illustration of results should be reserved for the full paper.
- Supplementary information on compound characterisation is useful for the referees.

Only in very exceptional circumstances, requiring special justification from the author, will communications be allowed to extend to four printed pages.
