# Specialised searching

The graphical abstracting services at the RSC are an indispensable tool to help you search the literature. Focussing on specific areas of research they review key primary journals for novel and interesting chemistry.

## requires specialised tools

**Methods in Organic Synthesis** provides information on reaction schemes, new reactions and new methods. Topics include functional group changes, the introduction of chiral centres, and enzyme and biological transformations.

The screenshot shows a web browser displaying the RSC Publishing Methods in Organic Synthesis Database. The interface includes a search bar, dropdown menus for 'RSC quicklinks' (such as 'Search information area', 'Select a subject', 'Select a journal', 'Select a title', 'I am interested in...', and 'Select a product'), and a sidebar with links for 'Index Entries', 'Discussed', 'Reactants', 'Products', and 'Print'. Below the search bar, there is a detailed search result for a specific article:

59453 Tandem radical rearrangement/Pd-catalysed translocation of bicyclo[2.2.2]octanes. An efficient access to the oxa-triquinane core structure  
J.-H. Liao; N. Maulide; B. Augustyns; I. E. Marko\*  
*Org. Biomol. Chem.*, 2006, 4(8), 1464-1467

The online database has excellent functionality. Search by: authors, products, reaction, reactants and reagents.

With **Methods in Organic Synthesis** you can find exactly what you need. Search results include diagrams of reaction schemes. Also available as a print bulletin.

Registered charity Number 207890
