

## Subject Index of Volume 65

- Acetobacter aceti*  
optimum operating conditions in closed-system industrial acetifiers (semi-continuous operation): a study by computer simulation, 201
- Acrylic carriers  
immobilization of lipase on various acrylic copolymers, 249
- Adsorbent  
simulation of pH elution in high-performance affinity chromatography using non-porous adsorbents, 175
- Aeration rate  
a study on the  $\alpha$ -amylase fermentation performed by *Bacillus amyloliquefaciens*, 237
- Airlift reactor  
the role of gas disengagement and surface active agents on hydrodynamic and mass transfer characteristics of airlift reactors, 263
- Algorithm  
an efficient algorithm for solving hollow-fiber bioreactor design equations, 77
- $\alpha$ -Amylase  
discrimination between  $\alpha$ -amylase isozymes with anti-peptide antibodies, 105  
a study on the  $\alpha$ -amylase fermentation performed by *Bacillus amyloliquefaciens*, 237
- Anaerobic stratified biofilm  
modelling and simulation of anaerobic stratified biofilm for methane production and prediction of multiple steady states, 37
- Anionic surfactant  
characterisation of colloidal gas aphrons for subsequent use for protein recovery, 1
- Antibiotic separation  
a new approach to evaluate kinetic parameters and mass transfer coefficients in continuous stirred tank reactors. Application to antibiotic separation, 63
- Antibody  
An investigation into the possible effects of proteolysis on IgM enzyme-linked immunosorbent assay titres, 87
- Antibody production  
fermenter balancing for semi-continuous, multi-tank mammalian cell culture processes, 123
- Antifoam  
the role of gas disengagement and surface active agents on hydrodynamic and mass transfer characteristics of airlift reactors, 263
- Anti-peptide antibody  
discrimination between  $\alpha$ -amylase isozymes with anti-peptide antibodies, 105  
immunogenicity differences between intact insulin and a peptide representing the C-terminal region, 257
- Bacillus amyloliquefaciens*  
a study on the  $\alpha$ -amylase fermentation performed by *Bacillus amyloliquefaciens*, 237
- Batch stirred reactor  
enzymatic hydrolysis of wheat proteins. Part 1. Enzymatic kinetics and study of limited hydrolysis in a batch stirred reactor, 187
- Biofilm reactors  
denitrification kinetics in a rotating disk biofilm reactor, 227
- Biofilters  
analysis and comparison of biofilter models, 55  
a generalized approach for dynamic modelling and simulation of biofilters: application to waste-water denitrification, 133
- Biological wastewater treatment  
effect of sinusoidal perturbations of feed concentration on multi-substrate carbon oxidation and nitrification process in an upflow packed-bed biofilm reactor, 165
- Bioparticle  
substrate inhibition kinetics in a fluidized bioparticle, 117
- Bioprocess optimisation  
fermenter balancing for semi-continuous, multi-tank mammalian cell culture processes, 123
- Biphasic model  
a new approach to evaluate kinetic parameters and mass transfer coefficients in continuous stirred tank reactors. Application to antibiotic separation, 63
- Butanol  
deactivation of immobilized Lipozyme Effect of butanol, temperature and water content, 159
- Ca-alginate matrix  
the adsorption of copper(II) by *Z. ramigera* immobilized on Ca-alginate in packed bed columns: a dynamic approach by stimulus-response technique and evaluation of adsorption data by moment analysis, 81
- Cadmium  
cell surface area as a major parameter in the uptake of cadmium by unicellular green microalgae, 13
- Chaperonin  
operation conditions of enzyme refolding by chaperonin and recycle system using ultrafiltration, 151
- Chlamydomonas reinhardtii*  
cell surface area as a major parameter in the uptake of cadmium by unicellular green microalgae, 13
- Chlorella pyrenoidosa*  
cell surface area as a major parameter in the uptake of cadmium by unicellular green microalgae, 13
- Chlorella vulgaris*  
cell surface area as a major parameter in the uptake of cadmium by unicellular green microalgae, 13
- Colloidal gas aphrons  
characterisation of colloidal gas aphrons for subsequent use for protein recovery, 1
- Computer simulation  
optimum operating conditions in closed-system industrial acetifiers (semi-continuous operation): a study by computer simulation, 201
- Continuous stirred tank reactors  
a new approach to evaluate kinetic parameters and mass transfer coefficients in continuous stirred tank reactors. Application to antibiotic separation, 63

- Copolymers  
immobilization of lipase on various acrylic copolymers, 249
- Cu<sup>II</sup> adsorption  
the adsorption of copper(II) by *Z. ramigera* immobilized on Ca-alginate in packed bed columns: a dynamic approach by stimulus–response technique and evaluation of adsorption data by moment analysis, 81
- Deactivation  
deactivation of immobilized Lipozyme Effect of butanol, temperature and water content, 159
- Debaryomyces hansenii*  
thermal inactivation of two yeast strains heated in a strawberry product: experimental data and kinetic model, 99
- Denitrification  
a generalized approach for dynamic modelling and simulation of biofilters: application to waste-water denitrification, 133  
denitrification kinetics in a rotating disk biofilm reactor, 227
- Di(2-ethylhexyl)phosphoric acid  
equilibrium studies on reactive extraction of lactic acid with an amine extractant, 47
- Dimensionless time domain  
population dynamics of recombinant cultures in a dimensionless time domain, 213
- Dynamic simulation and modelling  
a generalized approach for dynamic modelling and simulation of biofilters: application to waste-water denitrification, 133
- Effectiveness factor  
an efficient algorithm for solving hollow-fiber bioreactor design equations, 77  
substrate inhibition kinetics in a fluidized bioparticle, 117
- ELISA titres  
An investigation into the possible effects of proteolysis on IgM enzyme-linked immunosorbent assay titres, 87
- Enzymatic hydrolysis  
enzymatic hydrolysis of wheat proteins. Part 1. Enzymatic kinetics and study of limited hydrolysis in a batch stirred reactor, 187  
enzymatic hydrolysis of wheat proteins. Part 2. Comparison of performance of batch-stirred and torus reactors, 195
- Enzymatic transformation  
enzymatic transformation of sinapine using polyphenol oxidase from *Trametes versicolor*. Effect of pH and temperature and model development, 27
- Enzyme  
An investigation into the possible effects of proteolysis on IgM enzyme-linked immunosorbent assay titres, 87
- Equilibrium  
equilibrium studies on reactive extraction of lactic acid with an amine extractant, 47
- Fed-batch  
optimization of fungal polygalacturonase synthesis by *Saccharomyces cerevisiae* in fed-batch culture, 219
- Fermenter scheduling  
fermenter balancing for semi-continuous, multi-tank mammalian cell culture processes, 123
- Fixed bed  
separation of glucose/fructose mixtures. Analysis of elution of profiles, 209
- Fructose  
separation of glucose/fructose mixtures. Analysis of elution of profiles, 209
- Fruit products  
thermal inactivation of two yeast strains heated in a strawberry product: experimental data and kinetic model, 99
- $\beta$ -Galactosidase  
a method for evaluating lactose hydrolysis in a fixed bed reactor with  $\beta$ -galactosidase immobilized on chitosan, 93
- Gas disengagement  
the role of gas disengagement and surface active agents on hydrodynamic and mass transfer characteristics of airlift reactors, 263
- Glucose  
separation of glucose/fructose mixtures. Analysis of elution of profiles, 209
- Glucose oxidase  
modified PMMA monosize microbeads for glucose oxidase immobilization, 71
- GroE  
operation conditions of enzyme refolding by chaperonin and recycle system using ultrafiltration, 151
- Growth kinetics  
bioprocess parameters and oxygen transfer effects in the growth of *Pseudomonas dacunhae* for L-alanine production, 109
- High performance affinity chromatography  
simulation of pH elution in high-performance affinity chromatography using non-porous adsorbents, 175
- Hollow-fiber membrane bioreactors  
an efficient algorithm for solving hollow-fiber bioreactor design equations, 77
- Hydrodynamics  
the role of gas disengagement and surface active agents on hydrodynamic and mass transfer characteristics of airlift reactors, 263
- Hydrolysis  
a study on the  $\alpha$ -amylase fermentation performed by *Bacillus amyloliquefaciens*, 237
- Immobilization  
modified PMMA monosize microbeads for glucose oxidase immobilization, 71  
immobilization of lipase on various acrylic copolymers, 249
- Immobilized Lipozyme  
deactivation of immobilized Lipozyme Effect of butanol, temperature and water content, 159
- Immobilized *Z. ramigera*  
the adsorption of copper(II) by *Z. ramigera* immobilized on Ca-alginate in packed bed columns: a dynamic approach by stimulus–response technique and evaluation of adsorption data by moment analysis, 81
- Immunogenicity  
immunogenicity differences between intact insulin and a peptide representing the C-terminal region, 257
- Industrial acetifiers  
optimum operating conditions in closed-system industrial acetifiers (semi-continuous operation): a study by computer simulation, 201
- Insulin  
immunogenicity differences between intact insulin and a peptide representing the C-terminal region, 257
- Isozyme  
discrimination between  $\alpha$ -amylase isozymes with anti-peptide antibodies, 105
- Kinetic parameters  
a new approach to evaluate kinetic parameters and mass transfer coefficients in continuous stirred tank reactors. Application to antibiotic separation, 63
- Kinetics  
enzymatic hydrolysis of wheat proteins. Part 1. Enzymatic kinetics and study of limited hydrolysis in a batch stirred reactor, 187  
denitrification kinetics in a rotating disk biofilm reactor, 227

- Lactic acid  
equilibrium studies on reactive extraction of lactic acid with an amine extractant, 47
- Lactose  
a method for evaluating lactose hydrolysis in a fixed bed reactor with  $\beta$ -galactosidase immobilized on chitosan, 93
- L-alanine production  
bioprocess parameters and oxygen transfer effects in the growth of *Pseudomonas dacunhae* for L-alanine production, 109
- L-aspartate  $\beta$ -decarboxylase enzyme  
bioprocess parameters and oxygen transfer effects in the growth of *Pseudomonas dacunhae* for L-alanine production, 109
- Lipase  
immobilization of lipase on various acrylic copolymers, 249
- Low frequency thermo-ultrasonication  
low frequency thermo-ultrasonication of *Saccharomyces cerevisiae* suspensions: effect of temperature and of ultrasonic power, 145
- Mass transfer  
substrate inhibition kinetics in a fluidized bioparticle, 117  
the role of gas disengagement and surface active agents on hydrodynamic and mass transfer characteristics of airlift reactors, 263
- Mass transfer coefficient  
a new approach to evaluate kinetic parameters and mass transfer coefficients in continuous stirred tank reactors. Application to antibiotic separation, 63
- Metabolic stress  
optimization of fungal polygalacturonase synthesis by *Saccharomyces cerevisiae* in fed-batch culture, 219
- Metal ion  
cell surface area as a major parameter in the uptake of cadmium by unicellular green microalgae, 13
- Methane production  
modelling and simulation of anaerobic stratified biofilm for methane production and prediction of multiple steady states, 37
- Microalgae  
cell surface area as a major parameter in the uptake of cadmium by unicellular green microalgae, 13
- Microbial cells  
the application of mini-hydrocyclones in the concentration of yeast suspensions, 21
- Micro bubbles  
characterisation of colloidal gas aphrons for subsequent use for protein recovery, 1
- Mini-hydrocyclones  
the application of mini-hydrocyclones in the concentration of yeast suspensions, 21
- Model  
enzymatic transformation of sinapine using polyphenol oxidase from *Trametes versicolor*. Effect of pH and temperature and model development, 27  
a method for evaluating lactose hydrolysis in a fixed bed reactor with  $\beta$ -galactosidase immobilized on chitosan, 93
- Modelling  
modelling and simulation of anaerobic stratified biofilm for methane production and prediction of multiple steady states, 37
- Modified PMMA microbeads  
modified PMMA monosize microbeads for glucose oxidase immobilization, 71
- Moment technique  
the adsorption of copper(II) by *Z. ramigera* immobilized on Ca-alginate in packed bed columns: a dynamic approach by stimulus-response technique and evaluation of adsorption data by moment analysis, 81
- Nitrogen  
optimization of fungal polygalacturonase synthesis by *Saccharomyces cerevisiae* in fed-batch culture, 219
- Nonequilibrium  
a new approach to evaluate kinetic parameters and mass transfer coefficients in continuous stirred tank reactors. Application to antibiotic separation, 63
- Nonlinear reaction  
an efficient algorithm for solving hollow-fiber bioreactor design equations, 77
- Non-porous  
simulation of pH elution in high-performance affinity chromatography using non-porous adsorbents, 175
- Novobiocin adsorption  
a new approach to evaluate kinetic parameters and mass transfer coefficients in continuous stirred tank reactors. Application to antibiotic separation, 63
- Oxygen transfer  
bioprocess parameters and oxygen transfer effects in the growth of *Pseudomonas dacunhae* for L-alanine production, 109
- Oxygen uptake rate  
bioprocess parameters and oxygen transfer effects in the growth of *Pseudomonas dacunhae* for L-alanine production, 109
- Partial differential algebraic equations (PDAE)  
a generalized approach for dynamic modelling and simulation of biofilters: application to waste-water denitrification, 133
- Peak simulation  
simulation of pH elution in high-performance affinity chromatography using non-porous adsorbents, 175
- Peptide immunization  
immunogenicity differences between intact insulin and a peptide representing the C-terminal region, 257
- pH elution  
simulation of pH elution in high-performance affinity chromatography using non-porous adsorbents, 175
- Polyphenol oxidase  
enzymatic transformation of sinapine using polyphenol oxidase from *Trametes versicolor*. Effect of pH and temperature and model development, 27
- Population dynamics  
population dynamics of recombinant cultures in a dimensionless time domain, 213
- Protein recovery  
characterisation of colloidal gas aphrons for subsequent use for protein recovery, 1
- Protein refolding  
operation conditions of enzyme refolding by chaperonin and recycle system using ultrafiltration, 151
- Proteolysis  
An investigation into the possible effects of proteolysis on IgM enzyme-linked immunosorbent assay titres, 87
- Pseudomonas dacunhae*  
bioprocess parameters and oxygen transfer effects in the growth of *Pseudomonas dacunhae* for L-alanine production, 109
- Pulse response  
separation of glucose/fructose mixtures. Analysis of elution of profiles, 209
- Purification  
discrimination between  $\alpha$ -amylase isozymes with anti-peptide antibodies, 105
- Reactive extraction  
equilibrium studies on reactive extraction of lactic acid with an amine extractant, 47
- Reactor  
a method for evaluating lactose hydrolysis in a fixed bed reactor with  $\beta$ -galactosidase immobilized on chitosan, 93

- Recombinant  
 optimization of fungal polygalacturonase synthesis by *Saccharomyces cerevisiae* in fed-batch culture, 219
- Recombinant cultures  
 population dynamics of recombinant cultures in a dimensionless time domain, 213
- Rotating disk reactor  
 denitrification kinetics in a rotating disk biofilm reactor, 227
- Saccharomyces*  
 optimization of fungal polygalacturonase synthesis by *Saccharomyces cerevisiae* in fed-batch culture, 219
- Saccharomyces cerevisiae*  
 thermal inactivation of two yeast strains heated in a strawberry product: experimental data and kinetic model, 99  
 low frequency thermo-ultrasonication of *Saccharomyces cerevisiae* suspensions: effect of temperature and of ultrasonic power, 145
- Separation  
 separation of glucose/fructose mixtures. Analysis of elution of profiles, 209
- Simulation  
 modelling and simulation of anaerobic stratified biofilm for methane production and prediction of multiple steady states, 37
- Simultaneous carbon oxidation and nitrification  
 effect of sinusoidal perturbations of feed concentration on multi-substrate carbon oxidation and nitrification process in an upflow packed-bed biofilm reactor, 165
- Sinapine  
 enzymatic transformation of sinapine using polyphenol oxidase from *Trametes versicolor*. Effect of pH and temperature and model development, 27
- Split-peak  
 simulation of pH elution in high-performance affinity chromatography using non-porous adsorbents, 175
- Starch  
 a study on the  $\alpha$ -amylase fermentation performed by *Bacillus amyloliquefaciens*, 237
- Steady states  
 modelling and simulation of anaerobic stratified biofilm for methane production and prediction of multiple steady states, 37
- Stimulus–response analysis  
 the adsorption of copper(II) by *Z. ramigera* immobilized on Ca-alginate in packed bed columns: a dynamic approach by stimulus–response technique and evaluation of adsorption data by moment analysis, 81
- Submerged biofilters  
 effect of sinusoidal perturbations of feed concentration on multi-substrate carbon oxidation and nitrification process in an upflow packed-bed biofilm reactor, 165
- Substrate  
 a study on the  $\alpha$ -amylase fermentation performed by *Bacillus amyloliquefaciens*, 237
- Substrate inhibition  
 substrate inhibition kinetics in a fluidized bioparticle, 117
- Surfactant  
 the role of gas disengagement and surface active agents on hydrodynamic and mass transfer characteristics of airlift reactors, 263
- Synergistic effect  
 equilibrium studies on reactive extraction of lactic acid with an amine extractant, 47
- Temperature  
 deactivation of immobilized Lipozyme Effect of butanol, temperature and water content, 159
- Thermal resistance  
 thermal inactivation of two yeast strains heated in a strawberry product: experimental data and kinetic model, 99
- Thiele modulus  
 substrate inhibition kinetics in a fluidized bioparticle, 117
- Torus reactor  
 enzymatic hydrolysis of wheat proteins. Part 2. Comparison of performance of batch-stirred and torus reactors, 195
- Tri-*n*-octylamine  
 equilibrium studies on reactive extraction of lactic acid with an amine extractant, 47
- Ultrasonic power  
 low frequency thermo-ultrasonication of *Saccharomyces cerevisiae* suspensions: effect of temperature and of ultrasonic power, 145
- Upflow packed bed biofilm reactor  
 effect of sinusoidal perturbations of feed concentration on multi-substrate carbon oxidation and nitrification process in an upflow packed-bed biofilm reactor, 165
- Volatile organic compounds  
 analysis and comparison of biofilter models, 55
- Wastewater treatment  
 a generalized approach for dynamic modelling and simulation of biofilters: application to waste-water denitrification, 133
- Water content  
 deactivation of immobilized Lipozyme Effect of butanol, temperature and water content, 159
- Wheat proteins  
 enzymatic hydrolysis of wheat proteins. Part 1. Enzymatic kinetics and study of limited hydrolysis in a batch stirred reactor, 187  
 enzymatic hydrolysis of wheat proteins. Part 2. Comparison of performance of batch-stirred and torus reactors, 195
- Yeast suspension  
 the application of mini-hydrocyclones in the concentration of yeast suspensions, 21
