

Subject Index of Volume 101

- Absorption**
Analysis of a toluene stripping process: a comparison between a microfabricated stripping column and a conventional packed tower, 49
- Aldehydes**
Enhanced mass transfer using a novel polymer/carrier microreactor, 455
- Ascorbic acid**
Generation of metal nanoparticles in a microchannel reactor, 251
- Atmospheric plasma**
A micro plasma reactor for fluorinated waste gas treatment, 465
- Automated microreaction system**
Development of an automated microreaction system with integrated sensorics for process screening and production, 431
- Automatic shape optimization**
CFD-based optimal design of manifold in plate-fin microdevices, 397
- Autothermal**
Hydrogen production for fuel cell application in an autothermal microchannel reactor, 133
- Autothermal reforming**
CO selective oxidation in a microchannel reactor for PEM fuel cell, 101
- Axial mixing**
A model for predicting axial mixing during gas–liquid Taylor flow in microchannels at low Bodenstein numbers, 391
- Axle dual pipe**
Production of titania nanoparticles by using a new microreactor assembled with same axle dual pipe, 269
- Benzene**
Microreaction engineering studies of the hydroxylation of benzene with nitrous oxide, 17
- Bicolored polymeric microspheres**
Novel microreactors for functional polymer beads, 23
- Blockage**
Flow distribution in different microreactor scale-out geometries and the effect of manufacturing tolerances and channel blockage, 379
- Boiling**
Introduction of image analysis for the quantification of the boiling flow heat transfer, 357
- Brass wires**
Micro-structured string-reactor for autothermal production of hydrogen, 3
- Bubble-train flow**
Exploring the flow of immiscible fluids in a square vertical microchannel by direct numerical simulation, 285
- Calorimetric system**
A microreactor-based system for the study of fast exothermic reactions in liquid phase: characterization of the system, 241
- Calorimetry**
Direct monitoring of biochemical processes using micro-structured heat power detectors, 187
- Capillary electrophoresis**
Microfluidic lab-on-a-chip systems based on polymers—fabrication and application, 447
- Carbon coating**
Carbon-coated microstructured reactors for heterogeneously catalyzed gas phase reactions: influence of coating procedure on catalytic activity and selectivity, 11
- Carbon monoxide oxidation**
CO selective oxidation in a microchannel reactor for PEM fuel cell, 101
- Carbonization of polymers**
Carbon-coated microstructured reactors for heterogeneously catalyzed gas phase reactions: influence of coating procedure on catalytic activity and selectivity, 11
- Catalytic coating**
Design of a molybdenum high throughput microreactor for high temperature screening of catalytic coatings, 225
- Catalytic partial oxidation**
Catalytic conversion of propane to hydrogen in microstructured reactors, 93
- CCD Technique**
Microfluidic lab-on-a-chip systems based on polymers—fabrication and application, 447
- Cell cultivation**
Digital reaction technology by micro segmented flow—components, concepts and applications, 201
- CFD approach**
Design of a molybdenum high throughput microreactor for high temperature screening of catalytic coatings, 225
- CFD-simulation**
Numerical and experimental investigations on liquid mixing in static micromixers, 315
- Chip**
Chip modules for generation and manipulation of fluid segments for micro serial flow processes, 439
- Chip reactor**
Generation of metal nanoparticles in a microchannel reactor, 251
- Classification**
Feasibility study on concentration of slurry and classification of contained particles by microchannel, 171
- Cloning**
Digital reaction technology by micro segmented flow—components, concepts and applications, 201
- CO preferential oxidation**
CO selective oxidation in a microchannel reactor for PEM fuel cell, 101
- Coating**
Microreaction engineering studies of the hydroxylation of benzene with nitrous oxide, 17
- Colloidal particles**
A simple method of self assembled nano-particles deposition on the micro-capillary inner walls and the reactor application for photocatalytic and enzyme reactions, 261
- Colloidal solutions**
Generation of metal nanoparticles in a microchannel reactor, 251
- Computational fluid dynamics**
Mixing in microreactors: effectiveness of lamination segments as a form of feed on product distribution for multiple reactions, 323

- Numerical simulation of temperature distribution inside microfabricated free flow electrophoresis module, 347
- Interface configuration of the two layered laminar flow in a curved microchannel, 367
- Computational fluid dynamics (CFD)
 - CFD-based optimal design of manifold in plate-fin microdevices, 397
- Conversion
 - Mixing in microreactors: effectiveness of lamination segments as a form of feed on product distribution for multiple reactions, 323
- Coupling
 - Hydrogen production for fuel cell application in an autothermal microchannel reactor, 133
- Degree of mixing
 - Direct monitoring of biochemical processes using micro-structured heat power detectors, 187
- DEMiSTM
 - Microreaction engineering studies of the hydroxylation of benzene with nitrous oxide, 17
- Diffusion
 - Mixing in microreactors: effectiveness of lamination segments as a form of feed on product distribution for multiple reactions, 323
- Diffusion-controlled reaction
 - New methods for increasing productivity by using microreactors of planar pumping and alternating pumping types, 57
- Direct numerical simulation
 - Exploring the flow of immiscible fluids in a square vertical mini-channel by direct numerical simulation, 285
- Dispersed droplets
 - Microchannel devices for the coalescence of dispersed droplets produced for use in rapid extraction processes, 39
- DNA sensor
 - Microfluidic system for DNA sequence detection, 157
- Droplet formation
 - Novel microreactors for functional polymer beads, 23
- Electrokinetic flow
 - Electrochemical effects related to synthesis in micro reactors operating under electrokinetic flow, 237
- Electroosmosis
 - Modeling of electric-field driven transport processes in microdevices for immunoassay, 303
- Electroosmotic flow
 - Numerical simulation of temperature distribution inside microfabricated free flow electrophoresis module, 347
- Electrophoresis
 - Modeling of electric-field driven transport processes in microdevices for immunoassay, 303
- ELISA
 - Modeling of electric-field driven transport processes in microdevices for immunoassay, 303
- Enzymes
 - Direct monitoring of biochemical processes using micro-structured heat power detectors, 187
- Exothermic reactions
 - A microreactor-based system for the study of fast exothermic reactions in liquid phase: characterization of the system, 241
- Extraction method
 - Experimental approaches to a better understanding of mixing performance of microfluidic devices, 409
- Fecralloy
 - Catalytic conversion of propane to hydrogen in microstructured reactors, 93
- Fe-ZSM-5
 - Microreaction engineering studies of the hydroxylation of benzene with nitrous oxide, 17
- Flow distribution
 - Flow distribution in different microreactor scale-out geometries and the effect of manufacturing tolerances and channel blockage, 379
- Flow-through chip calorimeter
 - Direct monitoring of biochemical processes using micro-structured heat power detectors, 187
- Flow-through PCR
 - Microfabricated flow-through device for DNA amplification—towards in situ gene analysis, 151
- Fluid segments
 - Chip modules for generation and manipulation of fluid segments for micro serial flow processes, 439
- Fluorinated waste gas
 - A micro plasma reactor for fluorinated waste gas treatment, 465
- Free flow electrophoresis
 - Numerical simulation of temperature distribution inside microfabricated free flow electrophoresis module, 347
- Fuel processor
 - Development of microchannel methanol steam reformer, 87
- Fusion
 - Digital reaction technology by micro segmented flow—components, concepts and applications, 201
- g/l-Dispersion
 - g/l-Dispersion in interdigital micromixers with different mixing chamber geometries, 75
- Gold nanoparticles
 - Generation of metal nanoparticles in a microchannel reactor, 251
- Heat exchange
 - Experiments and modelling of an integrated preferential oxidation–heat exchanger microdevice, 123
- Heat transfer
 - Characterisation of electrically powered micro-heat exchangers, 339
 - Introduction of image analysis for the quantification of the boiling flow heat transfer, 357
- High throughput
 - Design of a molybdenum high throughput microreactor for high temperature screening of catalytic coatings, 225
- Hybrid model simulation
 - Numerical simulation of temperature distribution inside microfabricated free flow electrophoresis module, 347
- Hydrogen
 - Hydrogen production for fuel cell application in an autothermal microchannel reactor, 133
- Hydrogen generation
 - CO selective oxidation in a microchannel reactor for PEM fuel cell, 101
- Hydrogen production
 - Micro-structured string-reactor for autothermal production of hydrogen, 3
 - Catalytic conversion of propane to hydrogen in microstructured reactors, 93
- Hydrogenation of acrolein
 - Carbon-coated microstructured reactors for heterogeneously catalyzed gas phase reactions: influence of coating procedure on catalytic activity and selectivity, 11
- Hydroxylation
 - Microreaction engineering studies of the hydroxylation of benzene with nitrous oxide, 17
- Image analysis
 - Introduction of image analysis for the quantification of the boiling flow heat transfer, 357
- Immunoassay
 - Modeling of electric-field driven transport processes in microdevices for immunoassay, 303

- Integration**
Experiments and modelling of an integrated preferential oxidation–heat exchanger microdevice, 123
- Intensity profiles**
Spatially resolved detection of miniaturized reaction–diffusion experiments in chip reactors for educational purposes, 163
- Interdigital micromixer**
g/l-Dispersion in interdigital micromixers with different mixing chamber geometries, 75
Optimization of interdigital micromixers via analytical modeling—exemplified with the SuperFocus mixer, 403
- Ion exchange**
Enhanced mass transfer using a novel polymer/carrier microreactor, 455
- Lab-on-a-chip**
Investigations on the compatibility of chemically oxidized silicon (SiO_x)-surfaces for applications towards chip-based polymerase chain reaction, 333
Microfluidic lab-on-a-chip systems based on polymers—fabrication and application, 447
- Laminar**
Introduction of image analysis for the quantification of the boiling flow heat transfer, 357
- Laminar flow**
Interface configuration of the two layered laminar flow in a curved microchannel, 367
- Laminar flow behaviour**
Characterisation of residence time and residence time distribution in chip reactors with modular arrangements by integrated optical detection, 373
- Letero coagulation**
A simple method of self assembled nano-particles deposition on the micro-capillary inner walls and the reactor application for photocatalytic and enzyme reactions, 261
- Liquid-flow splitting unit**
Numbering-up of micro devices: a first liquid-flow splitting unit, 421
- Liquid–liquid extraction**
Microchannel devices for the coalescence of dispersed droplets produced for use in rapid extraction processes, 39
- Liquid–liquid interface**
New methods for increasing productivity by using microreactors of planar pumping and alternating pumping types, 57
- Low Bodenstein number**
A model for predicting axial mixing during gas–liquid Taylor flow in microchannels at low Bodenstein numbers, 391
- Manifold shape**
CFD-based optimal design of manifold in plate-fin microdevices, 397
- Mass transfer**
Enhanced mass transfer using a novel polymer/carrier microreactor, 455
- Membrane**
A new proton-conducting porous silicon membrane for small fuel cells, 107
- Methanol**
Micro-structured string-reactor for autothermal production of hydrogen, 3
Wall coating of a $\text{CuO}/\text{ZnO}/\text{Al}_2\text{O}_3$ methanol steam reforming catalyst for micro-channel reformers, 113
- Methanol Steam reforming**
Development of microchannel methanol steam reformer, 87
- Micro serial flow processes**
Chip modules for generation and manipulation of fluid segments for micro serial flow processes, 439
- Microchannel**
Microchannel devices for the coalescence of dispersed droplets produced for use in rapid extraction processes, 39
Development of microchannel methanol steam reformer, 87
Spatially resolved detection of miniaturized reaction–diffusion experiments in chip reactors for educational purposes, 163
Feasibility study on concentration of slurry and classification of contained particles by microchannel, 171
A microreactor-based system for the study of fast exothermic reactions in liquid phase: characterization of the system, 241
Porous media simplified simulation of single- and two-phase flow heat transfer in micro-channel heat exchangers, 295
Characterisation of electrically powered micro-heat exchangers, 339
- Microchannel reactor**
CO selective oxidation in a microchannel reactor for PEM fuel cell, 101
- Microchip**
Modeling of electric-field driven transport processes in microdevices for immunoassay, 303
- Micro-evaporator**
Characterisation of electrically powered micro-heat exchangers, 339
- Microfabrication**
Microfabricated flow-through device for DNA amplification—towards in situ gene analysis, 151
- Microfluidic device**
Experimental approaches to a better understanding of mixing performance of microfluidic devices, 409
- Microfluidic system**
Microfluidic system for DNA sequence detection, 157
Microfluidic lab-on-a-chip systems based on polymers—fabrication and application, 447
- Microfluidics**
Novel microreactors for functional polymer beads, 23
Interface configuration of the two layered laminar flow in a curved microchannel, 367
- Micro-kelvin thermostat**
Direct monitoring of biochemical processes using micro-structured heat power detectors, 187
- Micromixer**
Development of a new micromixer based on split/recombination for mass production and its application to soap free emulsifier, 31
Experimental approaches to a better understanding of mixing performance of microfluidic devices, 409
Novel multifunctional microreaction unit for chemical engineering, 469
- Microreaction engineering/catalysis**
Microreaction engineering studies of the hydroxylation of benzene with nitrous oxide, 17
- Microreaction technology**
Numerical and experimental investigations on liquid mixing in static micromixers, 315
- Microreactor**
Analysis of a toluene stripping process: a comparison between a microfabricated stripping column and a conventional packed tower, 49
New methods for increasing productivity by using microreactors of planar pumping and alternating pumping types, 57
Development of microchannel methanol steam reformer, 87
Wall coating of a $\text{CuO}/\text{ZnO}/\text{Al}_2\text{O}_3$ methanol steam reforming catalyst for micro-channel reformers, 113
Experiments and modelling of an integrated preferential oxidation–heat exchanger microdevice, 123
Synthesis of pigments in a three-stage microreactor pilot plant—an experimental technical report, 179
 γ -Ray-initiated dispersion polymerization of PMA in microreactor, 195
Digital reaction technology by micro segmented flow—components, concepts and applications, 201
Design of a molybdenum high throughput microreactor for high temperature screening of catalytic coatings, 225
Electrochemical effects related to synthesis in micro reactors operating under electrokinetic flow, 237

- A microreactor-based system for the study of fast exothermic reactions in liquid phase: characterization of the system, 241
- Production of titania nanoparticles by using a new microreactor assembled with same axle dual pipe, 269
- Preparation of functionalized nanostructures on microchannel surface and their use for enzyme microreactors, 277
- Numerical and experimental investigations on liquid mixing in static micromixers, 315
- Mixing in microreactors: effectiveness of lamination segments as a form of feed on product distribution for multiple reactions, 323
- Interface configuration of the two layered laminar flow in a curved microchannel, 367
- Characterisation of residence time and residence time distribution in chip reactors with modular arrangements by integrated optical detection, 373
- Flow distribution in different microreactor scale-out geometries and the effect of manufacturing tolerances and channel blockage, 379
- A micro plasma reactor for fluorinated waste gas treatment, 465
- Microreactor technology
 - A simple method of self assembled nano-particles deposition on the micro-capillary inner walls and the reactor application for photo-catalytic and enzyme reactions, 261
- Micro-structure
 - Introduction of image analysis for the quantification of the boiling flow heat transfer, 357
- Microstructure reactor
 - Fast temperature cycling in microstructure devices, 217
- Micro-structured
 - Micro-structured string-reactor for autothermal production of hydrogen, 3
- Micro-structured electrode
 - A micro plasma reactor for fluorinated waste gas treatment, 465
- Microstructured reactor
 - Carbon-coated microstructured reactors for heterogeneously catalyzed gas phase reactions: influence of coating procedure on catalytic activity and selectivity, 11
 - Catalytic conversion of propane to hydrogen in microstructured reactors, 93
 - Hydrogen production for fuel cell application in an autothermal micro-channel reactor, 133
- Miniature fuel cell
 - A new proton-conducting porous silicon membrane for small fuel cells, 107
- Miniaturized module
 - Numerical simulation of temperature distribution inside microfabricated free flow electrophoresis module, 347
- Miniaturized PCR
 - Investigations on the compatibility of chemically oxidized silicon (SiO_x)-surfaces for applications towards chip-based polymerase chain reaction, 333
- Mixing performance
 - Experimental approaches to a better understanding of mixing performance of microfluidic devices, 409
- Modeling
 - Experiments and modelling of an integrated preferential oxidation–heat exchanger microdevice, 123
 - Modeling of electric-field driven transport processes in microdevices for immunoassay, 303
- Molybdenum
 - Design of a molybdenum high throughput microreactor for high temperature screening of catalytic coatings, 225
- Monodisperse emulsion
 - Novel microreactors for functional polymer beads, 23
- Monodispersed particles
 - A simple method of self assembled nano-particles deposition on the micro-capillary inner walls and the reactor application for photo-catalytic and enzyme reactions, 261
- Multi-channel gas feed system
 - g/l-Dispersion in interdigital micromixers with different mixing chamber geometries, 75
- Multifunctional microreaction unit
 - Novel multifunctional microreaction unit for chemical engineering, 469
- Multilamination
 - Mixing in microreactors: effectiveness of lamination segments as a form of feed on product distribution for multiple reactions, 323
- Multiple reactions
 - Mixing in microreactors: effectiveness of lamination segments as a form of feed on product distribution for multiple reactions, 323
- Multi-scale approach
 - Synthesis of pigments in a three-stage microreactor pilot plant—an experimental technical report, 179
- Nafion[®]
 - A new proton-conducting porous silicon membrane for small fuel cells, 107
- Nanostructures
 - Preparation of functionalized nanostructures on microchannel surface and their use for enzyme microreactors, 277
- Ni
 - Catalytic conversion of propane to hydrogen in microstructured reactors, 93
- Nitration reactions
 - Development of an automated microreaction system with integrated sensorics for process screening and production, 431
- Nitrous oxide
 - Microreaction engineering studies of the hydroxylation of benzene with nitrous oxide, 17
- Numbering-up
 - Synthesis of pigments in a three-stage microreactor pilot plant—an experimental technical report, 179
 - Numbering-up of micro devices: a first liquid-flow splitting unit, 421
- Online analysis
 - Development of an automated microreaction system with integrated sensorics for process screening and production, 431
- On-line process control
 - Synthesis of pigments in a three-stage microreactor pilot plant—an experimental technical report, 179
- Optimization process
 - Optimization of interdigital micromixers via analytical modeling—exemplified with the SuperFocus mixer, 403
- Particle
 - Feasibility study on concentration of slurry and classification of contained particles by microchannel, 171
- Particle size and size distribution
 - γ-Ray-initiated dispersion polymerization of PMA in microreactor, 195
- PCR-chip
 - Investigations on the compatibility of chemically oxidized silicon (SiO_x)-surfaces for applications towards chip-based polymerase chain reaction, 333
- PDMS
 - Microfabricated flow-through device for DNA amplification—towards in situ gene analysis, 151
- PEMFCs
 - Development of microchannel methanol steam reformer, 87
- Pentafluorophenyl ester
 - Electrochemical effects related to synthesis in micro reactors operating under electrokinetic flow, 237
- Periodic process
 - Fast temperature cycling in microstructure devices, 217
- Phenol
 - Microreaction engineering studies of the hydroxylation of benzene with nitrous oxide, 17

- Pigments**
Synthesis of pigments in a three-stage microreactor pilot plant—an experimental technical report, 179
- Plate-fin microdevices**
CFD-based optimal design of manifold in plate-fin microdevices, 397
- PMA**
 γ -Ray-initiated dispersion polymerization of PMA in microreactor, 195
- Polymer/carrier microreactor**
Enhanced mass transfer using a novel polymer/carrier microreactor, 455
- Polymerisation**
Enhanced mass transfer using a novel polymer/carrier microreactor, 455
- Polymer-supported organic synthesis**
Enhanced mass transfer using a novel polymer/carrier microreactor, 455
- Polyvinyl pyrrolidone**
Generation of metal nanoparticles in a microchannel reactor, 251
- Porous silicon**
A new proton-conducting porous silicon membrane for small fuel cells, 107
- Preferential oxidation**
Experiments and modelling of an integrated preferential oxidation–heat exchanger microdevice, 123
- Propane**
Catalytic conversion of propane to hydrogen in microstructured reactors, 93
- Pumping**
New methods for increasing productivity by using microreactors of planar pumping and alternating pumping types, 57
- Radiation dispersion polymerization**
 γ -Ray-initiated dispersion polymerization of PMA in microreactor, 195
- Reaction–diffusion systems**
Spatially resolved detection of miniaturized reaction–diffusion experiments in chip reactors for educational purposes, 163
- Reformers**
Wall coating of a CuO/ZnO/Al₂O₃ methanol steam reforming catalyst for micro-channel reformers, 113
- Residence time distribution**
Characterisation of residence time and residence time distribution in chip reactors with modular arrangements by integrated optical detection, 373
- Rh**
Catalytic conversion of propane to hydrogen in microstructured reactors, 93
- Robust design**
CFD-based optimal design of manifold in plate-fin microdevices, 397
- Scale-out**
Flow distribution in different microreactor scale-out geometries and the effect of manufacturing tolerances and channel blockage, 379
- Screening and evaluation of microdevices**
Synthesis of pigments in a three-stage microreactor pilot plant—an experimental technical report, 179
- Segmented flow**
Digital reaction technology by micro segmented flow—components, concepts and applications, 201
- Selective reduction**
Enhanced mass transfer using a novel polymer/carrier microreactor, 455
- Selectivity**
Mixing in microreactors: effectiveness of lamination segments as a form of feed on product distribution for multiple reactions, 323
- Self-assembly**
A simple method of self assembled nano-particles deposition on the micro-capillary inner walls and the reactor application for photocatalytic and enzyme reactions, 261
- Sensors**
Development of an automated microreaction system with integrated sensorics for process screening and production, 431
- Separation**
Feasibility study on concentration of slurry and classification of contained particles by microchannel, 171
- Separation-layer mixer**
Numbering-up of micro devices: a first liquid-flow splitting unit, 421
- Serial processing**
Digital reaction technology by micro segmented flow—components, concepts and applications, 201
- Single-phase and two-phase flow**
Porous media simplified simulation of single- and two-phase flow heat transfer in micro-channel heat exchangers, 295
- SNP**
Microfluidic system for DNA sequence detection, 157
- Soap free emulsion**
Development of a new micromixer based on split/recombination for mass production and its application to soap free emulsifier, 31
- Sol–gel procedure**
Preparation of functionalized nanostructures on microchannel surface and their use for enzyme microreactors, 277
- Splitting**
Digital reaction technology by micro segmented flow—components, concepts and applications, 201
- Splitting and recombination**
Development of a new micromixer based on split/recombination for mass production and its application to soap free emulsifier, 31
- Square mini-channel**
Exploring the flow of immiscible fluids in a square vertical mini-channel by direct numerical simulation, 285
- Steam reforming**
Micro-structured string-reactor for autothermal production of hydrogen, 3
Catalytic conversion of propane to hydrogen in microstructured reactors, 93
- Stripping**
Analysis of a toluene stripping process: a comparison between a microfabricated stripping column and a conventional packed tower, 49
- SuperFocus**
Optimization of interdigital micromixers via analytical modeling—exemplified with the SuperFocus mixer, 403
- Surface-compatibility**
Investigations on the compatibility of chemically oxidized silicon (SiO_x)-surfaces for applications towards chip-based polymerase chain reaction, 333
- Suspension**
Feasibility study on concentration of slurry and classification of contained particles by microchannel, 171
- Taylor bubble**
Exploring the flow of immiscible fluids in a square vertical mini-channel by direct numerical simulation, 285
- Taylor flow**
A model for predicting axial mixing during gas–liquid Taylor flow in microchannels at low Bodenstein numbers, 391
- Temperature modulation**
Fast temperature cycling in microstructure devices, 217
- TiO₂ catalyst**
A simple method of self assembled nano-particles deposition on the micro-capillary inner walls and the reactor application for photocatalytic and enzyme reactions, 261
- Titania nanoparticles**
Production of titania nanoparticles by using a new microreactor assembled with same axle dual pipe, 269

Tolerance

Flow distribution in different microreactor scale-out geometries and the effect of manufacturing tolerances and channel blockage, 379

Toluene

Analysis of a toluene stripping process: a comparison between a microfabricated stripping column and a conventional packed tower, 49

T-shaped micromixers

Numerical and experimental investigations on liquid mixing in static micromixers, 315

Two phase

A model for predicting axial mixing during gas–liquid Taylor flow in microchannels at low Bodenstein numbers, 391

TwoPorFlow

Porous media simplified simulation of single- and two-phase flow heat transfer in micro-channel heat exchangers, 295

Unsteady state

Fast temperature cycling in microstructure devices, 217

Villermaux/Dushman method

Experimental approaches to a better understanding of mixing performance of microfluidic devices, 409

Villermaux–Dushman reaction

Novel multifunctional microreaction unit for chemical engineering, 469

VOC

Analysis of a toluene stripping process: a comparison between a microfabricated stripping column and a conventional packed tower, 49

Wall coating

Wall coating of a CuO/ZnO/Al₂O₃ methanol steam reforming catalyst for micro-channel reformers, 113

Washcoating

CO selective oxidation in a microchannel reactor for PEM fuel cell, 101

Yield

Mixing in microreactors: effectiveness of lamination segments as a form of feed on product distribution for multiple reactions, 323
