
Quarterly Reviews

No 2 Vol 22 1968

	Page
Asymmetric Synthesis By D. R. Boyd and M. A. McKervey	95
The Interaction of Aromatic Nitro-compounds with Bases By E. BunceI, A. R. Norris, and K. E. Russell	123
The Reactions of Ions and Excited Atoms of the Inert Gases By B. Brocklehurst	147
Semiconduction and Photoconduction of Biological Pigments By R. J. Cherry	160
Liquid Crystals as Solvents in Nuclear Magnetic Resonance By G. R. Luckhurst	179
The Theory of Thermal Electron-transfer Reactions in Solution By I. Ruff	199
Reduction of Nitro- and Nitroso-compounds by Tervalent Phosphorus Reagents By J. I. G. Cadogan	222

The Chemical Society London

Quarterly Reviews contains articles by recognised authorities on selected topics from general, physical, inorganic, and organic chemistry. The Journal and Annual Reports interest primarily the research worker: Quarterly Reviews is designed for a wider range of readers. It is intended that each review article shall be of interest to chemists generally and not only to workers in the particular field being reviewed.

The submission of reviews for publication is welcomed, but intending authors are advised to write in the first place to the Editor, The Chemical Society, Burlington House, Piccadilly, London, W.1. Such preliminary communications should be accompanied by an outline of the ground to be covered (about two quarto pages) rather than by the completed manuscript.

Price to non-fellows £4 10s. 0d. per annum
