

Carbohydrate Chemistry, Volume 2

**A review of the recent literature by R. D. Guthrie,
R. J. Ferrier, M. J. How, and P. J. Somers.**

'Carbohydrate Chemistry' reviews and evaluates progress, reported during the previous year, to a depth and comprehensiveness not available elsewhere. Coverage is the entire chemistry (including physical and analytical aspects) of the monosaccharides, disaccharides, oligosaccharides, and polysaccharides and of the chemically derived and biologically occurring derivatives.

The quality of the team of reporters, led by Dr. R. D. Guthrie, ensures the authoritative standing of this annual report, which will be an important desk tool to chemists and biochemists whose research has carbohydrate aspects, and a standard reference book to libraries.

Volume 1, published 1968, still available
(SBN 85186 002 8)

Volume 2, now available
(SBN 85186 012 5)

Price per volume

Fellows of The Chemical Society £2. 0.0 (US \$4.80)

Non Fellows £3.10.0 (US \$8.40)

Spectroscopic Properties of Inorganic and Organometallic Compounds, Volume 2

A review of recent literature compiled by
**N. N. Greenwood, J. W. Akitt, W. Errington,
T. C. Gibb and B. P. Straughan.**

Spectroscopic techniques are central to the study of chemical compounds, and this publication reviews and evaluates results, reported during the previous year, to a depth and comprehensiveness not available elsewhere. Thus the reporters, led by Professor N. N. Greenwood, deal with over 2800 references in Volume 1, each of which was studied in its original primary source.

The work is divided into chapters each dealing with a particular spectroscopic technique; not only are results recorded but the wide variety of ways in which spectroscopic information can be used is indicated.

To the specialist this Report will serve as a source of ideas and information on spectroscopy and specific compounds; for a non-specialist there are indications of the scope of each technique and its possible applications to his own particular problems. To inorganic and organometallic chemists and spectroscopists it is therefore a desk tool, to chemists in general a mine of ideas, to libraries a useful source book.

Volume 1, published in 1968, still available
(SBN 85186 003 6)

Volume 2, now available
(SBN 85186 013 3)

Price per volume

Fellows of The Chemical Society £3.10.0 (US \$8.40)

Non-Fellows £5.0.0 (US \$12.00)

Amino-acids, Peptides, and Proteins, Volume 1

The Chemical Society announces the publication of Volume 1 in this, the third title in their series of Specialist Periodical Reports. This volume reviews and evaluates progress, reported during 1968, to a depth and comprehensiveness not available elsewhere. The scope is indicated by the principal chapter headings: Amino-acids; Structural investigation of peptides and proteins; Peptide synthesis; Peptides of abnormal structure; The relationship between structure and biological activity of peptides and proteins; Metal derivatives of amino-acids, peptides and proteins. The coverage includes naturally-occurring synthetic, and chemically modified materials, and chemical, physical, stereochemical, analytical, structural and synthetical studies.

Publication will be annual, authorship being undertaken by a team of eight scientists, led by Dr. G. T. Young of Oxford as Senior Reporter.

Specialist Periodical Reports are designed to assist the research worker or specialist in his own field, to give the non-specialist a concentrated but complete view of the topic being reported, and to provide libraries with a useful source book.

Size 8½" × 5½"

Pages xii + 308

Cloth Bound
