

The Chemical Society Specialist Periodical Reports now Available

Carbohydrate Chemistry.

Senior Reporter:

Dr. R. D. Guthrie,
University of Sussex.

Volume 3 297 pp. Price £7

Spectroscopic Properties of Inorganic and Organometallic Compounds.

Senior Reporter:

Professor N. N. Greenwood,
University of Newcastle upon Tyne.

Volume 3 527 pp. Price £10

Amino-acids, Peptides, and Proteins.

Senior Reporter:

Dr. G. T. Young,
University of Oxford.

Volume 2 258 pp. Price £6

Photochemistry.

Senior Reporter:

Professor D. Bryce-Smith,
University of Reading.

Volume 1 470 pp. Price £6
(Volume 2 due March 1971)

Mass Spectrometry.

Senior Reporter:

Dr. D. H. Williams,
Cambridge University.

Volume 1 307 pp. Price £7

Electrochemistry.

Senior Reporter:

Professor G. J. Hills,
University of Southampton.

Volume 1 274 pp. Price £7

Organic Compounds of Sulphur, Selenium, and Tellurium.

Senior Reporter:

Dr. D. H. Reid,
University of St. Andrews.

Volume 1 493 pp. Price £11

Organophosphorus Chemistry.

Senior Reporter:

Professor S. Trippett,
University of Leicester.

Volume 1 333 pp. Price £4
(Volume 2 due March 1971)

These regular topical reviews give comprehensive, critical coverage of the world's literature. Fellows of the Chemical Society and members of the Royal Institute of Chemistry may obtain these publications at reduced rates. Enquiries and orders should be addressed to:

The Chemical Society

Special Publications

No. 24: Essays on Free-radical Chemistry (*Co-ordinator, Professor R. O. C. Norman*). In November 1970 the Chemical Society published a special volume as a tribute to Professor D. H. Hey, FRS and Professor W. A. Waters, FRS. Entitled 'Essays on Free-radical Chemistry', the book serves as an illustration of the enormous value of the work of Professors Hey and Waters over the years, both as original discovery and as stimulation to others. The contributors to this volume have all taken inspiration from these two distinguished scientists at one time or another in their careers, and they are all, in fact, former colleagues or pupils of Professors Hey and Waters. The responsibility for collecting the essays in this book has rested in the hands of Professor R. O. C. Norman upon whose initiative this project was undertaken. The publication has been timed to coincide with the retirement of both Professor Hey and Professor Waters, and the Chemical Society chose the Symposium of Thursday, 19 November 1970, 'Progress in Organic Chemistry' as an opportunity of making a presentation of specially bound copies of the book to the two men whose fine work it acknowledges.

No. 25: Stability Constants of Metal-ion Complexes, Supplement No. 1 (*ca.* 860 pages) is in the course of preparation. The compilers, Professor L. G. Sillén, whose tragic death was reported recently, and Professor A. E. Martell, have tabulated data for the years 1963—1968 inclusive, and also any earlier data not included in the 1964 volume. This invaluable work of reference may be obtained for £16 for prepaid orders placed before 31 March 1971; after that date the price will be £20. Copies of the main volume, Special Publication No. 17, published in 1964, are still available at £8.

Copies of Special Publications No. 24, (437 pages; Privilege price £5.25, Public price £8.50) and No. 25, may be ordered from:
