
Quarterly Reviews

No 3 Vol 25 1971

	Page
X-Ray Emission Spectroscopy	
By D. S. Urch	343
Acidities of Carbon Acids	
By J. R. Jones	365
Metal-ion Control in the Synthesis of Schiff Base Complexes	
By L. F. Lindoy	379
The Adiabatic Born–Oppenheimer Approximation	
By C. J. H. Schutte	393
The Oxidation of Organic Nitrogen Compounds with Lead Tetra-acetate	
By J. B. Aylward	407
Applications of the Chemical Reactions of Proteins in Studies of their Structure and Function	
By R. B. Freedman	431

The Chemical Society London

Quarterly Reviews contains articles by recognised authorities on selected topics from general, physical, inorganic, and organic chemistry. The **Journal and Annual Reports** interest primarily the research worker: **Quarterly Reviews** is designed for a wider range of readers. It is intended that each review article shall be of interest to chemists generally and not only to workers in the particular field being reviewed.

The submission of reviews for publication is welcomed, but intending authors are advised to write in the first place to the Editor, The Chemical Society, Burlington House, Piccadilly, London, W1V 0BN. Such preliminary communications should be accompanied by an outline of the ground to be covered (about two quarto pages) rather than by the completed manuscript.

Price to non-fellows £4.50 per annum.

The Chemical Society—Endowed Lectures.

The Council of The Chemical Society has decided that the Endowed Lectures of the Society shall, in future, be published in full in *Quarterly Reviews* to ensure that there will be a permanent record. These will be in addition to the normal Review articles.
