

- Enzymes in organic synthesis: recent developments in aldol reactions and glycosylations **Shuichi Takayama, Glenn J. McGarvey and Chi-Huey Wong** 407–416

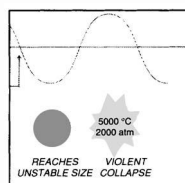

- Polymer-supported organic reactions: what takes place in the beads? **Philip Hodge** 417–424

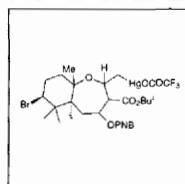

- Molecular and chemical basis of prion-related diseases **Sheila B. L. Ng and Andrew Doig** 425–432

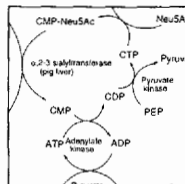

- Sandwich-type heteroleptic phthalocyaninato and porphyrinato metal complexes **Dennis K. P. Ng and Jianzhuang Jiang** 433–442

- Ultrasound in synthetic organic chemistry **Timothy J. Mason** 443–452

- Preparation of seven and larger membered heterocycles by electrophilic heteroatom cyclization **G rard Rousseau and Fadi Homsı** 453–462

- Glycosylation employing bio-systems: from enzymes to whole cells **Vladim r Křen and Joachim Thiem** 463–474

- 1997 Indexes 475–476

Articles that will appear in forthcoming issues

- Lanthanide(III) chelates for NMR biomedical applications **Silvio Aime, Mauro Botta, Mauro Fasano and Enzo Terreno**
- Self-assembly of single electron transistors and related devices **Daniel L. Feldheim and Christine D. Keating**
- New synthetic methods *via* radical cation fragmentation **Mariella Mella, Maurizio Fagnoni, Mauro Freccero, Elisa Fasani and Angelo Albini**
- Asymmetric synthesis of amino acids using sulfinimines (thiooxime *S*-oxides) **Franklin A. Davies, Ping Zhou and Bang-Chi Chen**
- Aspects of weak interactions **Dudley H. Williams and Martin S. Westwell**
- Covalency in semiconductor quantum dots **James R. Heath and Joseph J. Shiang**
- Equilibrium, frozen, excess and volumetric properties of dilute solutions **Michael J. Blandamer**
- The biomedical chemistry of technetium and rhenium **Jonathan R. Dilworth and Suzanne J. Parrott**
- Nonplanar porphyrins and their significance in proteins **John A. Shelnett, Xing-Zhi Song, Jiang-Guo Ma, Song-Ling Jia, Walter Jentzen and Craig J. Medforth**
- Non-conventional hydrogen bonds **Ibon Alkorta, José Elguero and Isabel Rozas**
- NMR studies of carbohydrate–protein interactions in solution **Ana Poveda and Jesús Jiménez-Barbero**
- Dibenzotetraaza[14]annulenes: versatile ligands for transition and main group metals **Philip Mountford**
- Carbocycles from carbohydrates *via* free-radical carbocyclizations: new synthetic approaches to glycomimetics
Angeles Martínez-Grau and José Marco-Contelles
- Liquid–liquid equilibria in polymer solutions at negative pressure **Attila Imre and W. Alexander van Hook**
- Seven-coordinate halocarbonyl complexes of the type $[MXY(CO)_3(NCMe)_2]$ ($M = Mo, W$; $X, Y = \text{halide, pseudohalide}$) as highly versatile starting materials **Paul K. Baker**
- The aza-Payne rearrangement: a synthetically valuable equilibration **Toshiro Ibuka**
- Mass spectrometric approaches to the reactivity of transient neutrals **Christoph A. Schalley, Georg Hornung, Detlef Schröder and Helmut Schwarz**
