Subject Index of Volume 84

Absorption
Sulfur dioxide absorption and desorption by water drops, 577
Acoustic velocity
Characterization of slurry systems by ultrasonic techniques, 215
Activated carbon
COD removal from textile industry effluent: pilot plant studies, 125
Activation
Adsorption kinetics for the removal of chromium(VI) from aqueous solution by adsorbents derived from used tyres and sawdust, 95
Adsorption
Film-pore diffusion modeling and contact time optimization for the adsorption of dyestuffs on pith, 77
COD removal from textile industry effluent: pilot plant studies, 125
Oxygenated aromatic compounds from renewable resources: motivation, opportunities, and adsorptive separations, 133
Sardinian natural clinoptilolites for heavy metals and ammonium removal: experimental and modeling, 275
Zinc adsorption from aqueous solutions using disposal sheep manure waste (SMW), 543
Adsorption kinetics
Adsorption kinetics for the removal of chromium(VI) from aqueous solution by adsorbents derived from used tyres and sawdust, 95
Adsorption rate
A moment technique for adsorption rate on metal surfaces of supported catalysts. CO adsorption on Pt–Al_2O_3 washcoated monolith, 429
Aerodynamics
Comparison of aerodynamics and mixing mechanisms of three mixers: Oxynator^{TM} gas–gas mixer, KMA and SMI static mixers, 343
Agglomerate
A note of the purity of crystals produced in batch suspension crystallization, 573
Agitated boiling
The unsparged power demand of modern gas dispersing impeller in boiling liquids, 15
Airlift bioreactors
Axial inhomogeneities in steady-state dissolved oxygen in airlift bioreactors: predictive models, 43
Airlift contactor
Performance of airlift contactors with baffles, 551
Airlift reactor
Oxygen mass transfer in a high solids loading three-phase internal-loop airlift reactor, 57
Amplitude
Natural convection along vertical wavy surfaces: an experimental study, 587
Aqueous solution
Zinc adsorption from aqueous solutions using disposal sheep manure waste (SMW), 543
Arbitrary kinetics
Solving design equations for a hollow fiber bioreactor with arbitrary kinetics, 445
Aspect ratio
Gas hold-up profiles in foaming liquids in bubble columns, 247
Attenuation
Characterization of slurry systems by ultrasonic techniques, 215
Axial dispersion
Axial inhomogeneities in steady-state dissolved oxygen in airlift bioreactors: predictive models, 43

Baffle
Performance of airlift contactors with baffles, 551
Bed depth service time model
COD removal from textile industry effluent: pilot plant studies, 125
Bidisperse catalyst
A moment technique for adsorption rate on metal surfaces of supported catalysts. CO adsorption on Pt–Al_2O_3 washcoated monolith, 429
Boiling reactors
The unsparged power demand of modern gas dispersing impeller in boiling liquids, 15
Bubble columns
Gas hold-up profiles in foaming liquids in bubble columns, 247
Bubble size
Bubble behavior in gas–liquid–solid three-phase circulating fluidized beds, 397
Bubble velocity
Bubble behavior in gas–liquid–solid three-phase circulating fluidized beds, 397
Butane
Oxidative dehydrogenation of butane using inert membrane reactor with a non-uniform permeation pattern, 497

Carbon dioxide
Experimental study of hydrogen, carbon dioxide and nitrogen permeation through a microporous silica membrane, 593
Catalyst
Theoretical analysis of a packed bed membrane reactor, 475
Catalytic reactor
Applications of a moving finite element method, 23
Classification of static and dynamic behavior in a fluidized-bed catalytic reactor, 503
Cavitation
The unsparged power demand of modern gas dispersing impeller in boiling liquids, 15
Censored data
Reconciliation of censored measurements in chemical processes: an alternative approach, 309
Ceramic membrane
Oxidative dehydrogenation of butane using inert membrane reactor with a non-uniform permeation pattern, 497
Characteristic drying curve
The assessment of a characteristic drying curve for milk powder for use in computational fluid dynamics modelling, 69
Chemical reaction
Modelling of a coiled tubular chemical reactor, 437
Clinoptilolites
Sardinian natural clinoptilolites for heavy metals and ammonium removal: experimental and modeling, 275

PII: S1385-8947(01)00236-4

CO adsorption
A moment technique for adsorption rate on metal surfaces of supported catalysts. CO adsorption on Pt–Al_2O_3 washcoated monolith, 429
Coalescence
Electrostatic enhancement of coalescence of water droplets in oil: a review of the current understanding, 173
Coiled tube
Laminar convection of non-Newtonian fluids in the thermal entrance region of coiled circular tubes, 223
Modelling of a coiled tubular chemical reactor, 437
Collision
Electrostatic enhancement of coalescence of water droplets in oil: a review of the current understanding, 173
Compartment model
CMA: integration of fluid dynamics and microbial kinetics in modelling of large-scale fermentations, 463
Composite powder
Morphological structure of nanometer TiO_2–Al_2O_3 composite powders synthesized in high temperature gas phase reactor, 405
Computational fluid dynamics
The assessment of a characteristic drying curve for milk powder for use in computational fluid dynamics modelling, 69
Concentration
Natural convection along vertical wavy surfaces: an experimental study, 587
Condensation
A new diffusion and flow theory for activated carbon from low pressure to capillary condensation range, 295
Conductivity
Investigation of the interaction of velocity and concentration fields by coupling LDV to conductivity probe in a continuous stirred tank reactor (CSTR), 239
Convection
Natural convection along vertical wavy surfaces: an experimental study, 587
Copper(II)
The application of montmorillonite clays impregnated with organic extractants for the removal of metals from aqueous solution. Part I. The preparation of clays impregnated with di-(2-ethylhexyl) phosphoric acid and their use for the removal of copper(II), 107
Co-rotating twin-screw extruder
Application of an integral method to modelling of laminar micromixing, 413
Cosmic flight aerodynamics
Radiation effects on free convection flow past a semi-infinite vertical plate with mass transfer, 335
Cracking
An experimental study of fluid catalytic cracking in a downer reactor, 517
Crossflow ultrafiltration
Ultrafiltration studies on solutions of pectin, glucose and their mixtures in a pilot scale crossflow membrane unit, 557
Crystal purity
A note of the purity of crystals produced in batch suspension crystallization, 573
Crystallization
A note of the purity of crystals produced in batch suspension crystallization, 573

Data reconciliation
Reconciliation of censored measurements in chemical processes: an alternative approach, 309
Deep-shaft reactor
Axial inhomogeneities in steady-state dissolved oxygen in airlift bioreactors: predictive models, 43
Design integral equations
Solving design equations for a hollow fiber bioreactor with arbitrary kinetics, 445
Detection limits
Reconciliation of censored measurements in chemical processes: an alternative approach, 309
DHR impeller
Numerical investigation on dispersive mixing characteristics of MAXBLEND and double helical ribbons, 565
Di-(2-ethylhexyl)phosphoric acid
The application of montmorillonite clays impregnated with organic extractants for the removal of metals from aqueous solution. Part I. The preparation of clays impregnated with di-(2-ethylhexyl) phosphoric acid and their use for the removal of copper(II), 107
Diffusion
Sardinian natural clinoptilolites for heavy metals and ammonium removal: experimental and modeling, 275
A new diffusion and flow theory for activated carbon from low pressure to capillary condensation range, 295
Direct-contact heat transfer
Heat transfer in gas–liquid–liquid three-phase direct-contact exchanger, 381
Dividing flow
Analytical solution of flow coefficients for a uniformly distributed porous channel, 1
Downer reactor
An experimental study of fluid catalytic cracking in a downer reactor, 517
Droplet–droplet interaction
Electrostatic enhancement of coalescence of water droplets in oil: a review of the current understanding, 173
Drops
Sulfur dioxide absorption and desorption by water drops, 577
Drying kinetics
The assessment of a characteristic drying curve for milk powder for use in computational fluid dynamics modelling, 69
Dyes
Film-pore diffusion modeling and contact time optimization for the adsorption of dyestuffs on pith, 77
Dynamic
Sardinian natural clinoptilolites for heavy metals and ammonium removal: experimental and modeling, 275
Classification of static and dynamic behavior in a fluidized-bed catalytic reactor, 503

Efficiency
A model for performance prediction of hydrocyclones, 7
Electrostatic separation
Electrostatic enhancement of coalescence of water droplets in oil: a review of the current understanding, 173
Entrainment
A capacity model for vertical pipes and packed columns based on entrainment, 355
Entrance region
Laminar convection of non-Newtonian fluids in the thermal entrance region of coiled circular tubes, 223
Equation of state
An efficient flash procedure using cubic equations of state, 201
Generalization of composition-dependent mixing rules for multicomponent systems: prediction of vapor–liquid and liquid–liquid equilibria, 283
Equilibria
Sardinian natural clinoptilolites for heavy metals and ammonium removal: experimental and modeling, 275
Excess function
Generalization of composition-dependent mixing rules for multicomponent systems: prediction of vapor–liquid and liquid–liquid equilibria, 283

Excess Gibbs energy models
Modeling of microemulsion phase diagrams from excess Gibbs energy models, 257
External-loop airlift
Phenomenological simulation model for gas hold-ups and volumetric mass transfer coefficients in external-loop airlift reactors, 599
Extractive distillation
New process for separating propylene and propane by extractive distillation with aqueous acetonitrile, 581

Fiber optic probe
Bubble behavior in gas–liquid–solid three-phase circulating fluidized beds, 397
Film drainage
Electrostatic enhancement of coalescence of water droplets in oil: a review of the current understanding, 173
Film rupture
Electrostatic enhancement of coalescence of water droplets in oil: a review of the current understanding, 173
Film-pore diffusion
Film-pore diffusion modeling and contact time optimization for the adsorption of dyestuffs on pith, 77
Floating solids
Suspension of floating solids with up-pumping pitched blade impellers; mixing time and power characteristics, 325
Flooding
A capacity model for vertical pipes and packed columns based on entrainment, 355
Flow distribution
Analytical solution of flow coefficients for a uniformly distributed porous channel, 1
Fluid dynamics
CMA: integration of fluid dynamics and microbial kinetics in modelling of large-scale fermentations, 463
Fluidised bed systems
Study of leaches obtained from the disposal of fly ash from PFBC and AFBC processes, 167
Fluidized bed
Study on mixing performance of municipal solid waste (MSW) in differential density fluidized beds (FBs), 161

β-Galactosidase
A simulation study of dynamic neural filtering and control of a fed-batch bioreactor under nonideal conditions, 533
Gas distributor
Analytical solution of flow coefficients for a uniformly distributed porous channel, 1
Gas hold-up
Phenomenological simulation model for gas hold-ups and volumetric mass transfer coefficients in external-loop airlift reactors, 599
Gas phase reaction
Morphological structure of nanometer TiO_2–Al_2O_3 composite powders synthesized in high temperature gas phase reactor, 405
Gas-assisted displacement
Gas-assisted displacement of a Newtonian fluid confined in a Hele-Shaw cell, 193
Gas–liquid interaction
A comprehensive model for the pressure drop in vertical pipes and packed columns, 367
Gas–liquid interfacial area
Bubble behavior in gas–liquid–solid three-phase circulating fluidized beds, 397
Experimental study on gas–liquid interfacial area and mass transfer coefficient in three-phase circulating fluidized beds, 485
Gas–liquid mass transfer
Performance of airlift contactors with baffles, 551
Gas–liquid mass transfer coefficient
Experimental study on gas–liquid interfacial area and mass transfer coefficient in three-phase circulating fluidized beds, 485
Gas–liquid–liquid three-phase flow
Heat transfer in gas–liquid–liquid three-phase direct-contact exchanger, 381
Generalized predictive control
Application of optimal adaptive generalized predictive control to a packed distillation column, 389
Geometrical proportions
A model for performance prediction of hydrocyclones, 7
Gibbs free energy
An efficient flash procedure using cubic equations of state, 201
Gibbs–Volmer theory
Phase transitions in a bed of vanadium catalyst for sulfuric acid production: experiment and modeling, 31
Glucose
Ultrafiltration studies on solutions of pectin, glucose and their mixtures in a pilot scale crossflow membrane unit, 557
Green's functions
Solving design equations for a hollow fiber bioreactor with arbitrary kinetics, 445

Heat transfer
Laminar convection of non-Newtonian fluids in the thermal entrance region of coiled circular tubes, 223
Heavy metal
Zinc adsorption from aqueous solutions using disposal sheep manure waste (SMW), 543
Hele-Shaw cell
Gas-assisted displacement of a Newtonian fluid confined in a Hele-Shaw cell, 193
Hexavalent chromium
Adsorption kinetics for the removal of chromium(VI) from aqueous solution by adsorbents derived from used tyres and sawdust, 95
Hold-up profiles
Gas hold-up profiles in foaming liquids in bubble columns, 247
Hollow fiber bioreactor
Solving design equations for a hollow fiber bioreactor with arbitrary kinetics, 445
Hydrocyclones
A model for performance prediction of hydrocyclones, 7
Hydrodynamic behavior
Performance of airlift contactors with baffles, 551
Hydrodynamics
Axial inhomogeneities in steady-state dissolved oxygen in airlift bioreactors: predictive models, 43
Hydrogen
Experimental study of hydrogen, carbon dioxide and nitrogen permeation through a microporous silica membrane, 593

Impellers
CMA: integration of fluid dynamics and microbial kinetics in modelling of large-scale fermentations, 463
Incineration
Study on mixing performance of municipal solid waste (MSW) in differential density fluidized beds (FBs), 161
Inclusions
A note of the purity of crystals produced in batch suspension crystallization, 573
Internal-loop airlift contactor
Performance of airlift contactors with baffles, 551
Ion exchange
Innovations in separations technology for the recycling and re-use of liquid waste streams, 149

Iterative computation method
Solving design equations for a hollow fiber bioreactor with arbitrary kinetics, 445

Jet pump
Particle transport by jet pump in a new liquid–solid circulating moving bed reactor, 491

KMA and SMI static mixers
Comparison of aerodynamics and mixing mechanisms of three mixers: Oxynator™ gas–gas mixer, KMA and SMI static mixers, 343

Laminar free convection flow
Radiation effects on free convection flow past a semi-infinite vertical plate with mass transfer, 335
Langmuir isotherm
Adsorption kinetics for the removal of chromium(VI) from aqueous solution by adsorbents derived from used tyres and sawdust, 95
LDV
Investigation of the interaction of velocity and concentration fields by coupling LDV to conductivity probe in a continuous stirred tank reactor (CSTR), 239
Leaching
Study of leaches obtained from the disposal of fly ash from PFBC and AFBC processes, 167
Lignin
Oxygenated aromatic compounds from renewable resources: motivation, opportunities, and adsorptive separations, 133
Linear instability theory
Estimating the onset of natural convection in a horizontal layer of a fluid with a temperature-dependent viscosity, 63
Liquid bridge
The effect of gravity on relative contributions of natural and Marangoni convections in a liquid bridge, 315
Liquid–liquid equilibria
Generalization of composition-dependent mixing rules for multicomponent systems: prediction of vapor–liquid and liquid–liquid equilibria, 283
Liquid-phase properties
Oxygen mass transfer in a high solids loading three-phase internal-loop airlift reactor, 57
Local dispersive mixing efficiency
Numerical investigation on dispersive mixing characteristics of MAXBLEND and double helical ribbons, 565
Lysimeter tests
Study of leaches obtained from the disposal of fly ash from PFBC and AFBC processes, 167

Magnesium *ortho*-vanadate
Oxidative dehydrogenation of butane using inert membrane reactor with a non-uniform permeation pattern, 497
Manifolds
Analytical solution of flow coefficients for a uniformly distributed porous channel, 1
Marangoni convection
The effect of gravity on relative contributions of natural and Marangoni convections in a liquid bridge, 315
Marangoni effect
Mass transfer with chemical reaction in conditions of spontaneous interfacial convection in processes of liquid extraction, 321
Mass transfer
Oxygen mass transfer in a high solids loading three-phase internal-loop airlift reactor, 57
Mass transfer with chemical reaction in conditions of spontaneous interfacial convection in processes of liquid extraction, 321
Mathematical modeling
Phase transitions in a bed of vanadium catalyst for sulfuric acid production: experiment and modeling, 31
MAXBLEND impeller
Numerical investigation on dispersive mixing characteristics of MAXBLEND and double helical ribbons, 565
Maxwell–Stefan theory
Verification of the Maxwell–Stefan theory for mixture diffusion in zeolites by comparison with MD simulations, 207
MD simulation
Verification of the Maxwell–Stefan theory for mixture diffusion in zeolites by comparison with MD simulations, 207
Membrane
Innovations in separations technology for the recycling and re-use of liquid waste streams, 149
Theoretical analysis of a packed bed membrane reactor, 475
Experimental study of hydrogen, carbon dioxide and nitrogen permeation through a microporous silica membrane, 593
Membrane reactor
Oxidative dehydrogenation of butane using inert membrane reactor with a non-uniform permeation pattern, 497
Microbial kinetics
CMA: integration of fluid dynamics and microbial kinetics in modelling of large-scale fermentations, 463
Microemulsion
Modeling of microemulsion phase diagrams from excess Gibbs energy models, 257
Milk particles
The assessment of a characteristic drying curve for milk powder for use in computational fluid dynamics modelling, 69
Mixing
Investigation of the interaction of velocity and concentration fields by coupling LDV to conductivity probe in a continuous stirred tank reactor (CSTR), 239
Mixing impellers
The unsparged power demand of modern gas dispersing impeller in boiling liquids, 15
Mixing performance
Study on mixing performance of municipal solid waste (MSW) in differential density fluidized beds (FBs), 161
Mixing rule
Generalization of composition-dependent mixing rules for multicomponent systems: prediction of vapor–liquid and liquid–liquid equilibria, 283
Mixing time
Suspension of floating solids with up-pumping pitched blade impellers; mixing time and power characteristics, 325
Mixture diffusion
Verification of the Maxwell–Stefan theory for mixture diffusion in zeolites by comparison with MD simulations, 207
Model
A model for performance prediction of hydrocyclones, 7
Modeling
Sulfur dioxide absorption and desorption by water drops, 577
Modeling and optimization
Film-pore diffusion modeling and contact time optimization for the adsorption of dyestuffs on pith, 77
Moment technique
A moment technique for adsorption rate on metal surfaces of supported catalysts. CO adsorption on Pt–Al_2O_3 washcoated monolith, 429
Monolithic catalyst
A moment technique for adsorption rate on metal surfaces of supported catalysts. CO adsorption on Pt–Al_2O_3 washcoated monolith, 429
Montmorillonite clays
The application of montmorillonite clays impregnated with organic extractants for the removal of metals from aqueous solution. Part I.

The preparation of clays impregnated with di-(2-ethylhexyl) phosphoric acid and their use for the removal of copper(II), 107
Moving bed reactor
Particle transport by jet pump in a new liquid–solid circulating moving bed reactor, 491
Moving finite elements
Applications of a moving finite element method, 23
Multiple impellers
CMA: integration of fluid dynamics and microbial kinetics in modelling of large-scale fermentations, 463
Municipal solid waste
Study on mixing performance of municipal solid waste (MSW) in differential density fluidized beds (FBs), 161
Nanometer powder
Morphological structure of nanometer TiO_2–Al_2O_3 composite powders synthesized in high temperature gas phase reactor, 405
Natural convection
Estimating the onset of natural convection in a horizontal layer of a fluid with a temperature-dependent viscosity, 63
The effect of gravity on relative contributions of natural and Marangoni convections in a liquid bridge, 315

Neural control
A simulation study of dynamic neural filtering and control of a fed-batch bioreactor under nonideal conditions, 533
Neural filtering
A simulation study of dynamic neural filtering and control of a fed-batch bioreactor under nonideal conditions, 533
Newtonian fluid
Gas-assisted displacement of a Newtonian fluid confined in a Hele-Shaw cell, 193
NPD function
Numerical investigation on dispersive mixing characteristics of MAXBLEND and double helical ribbons, 565
Numerical simulation
Numerical investigation on dispersive mixing characteristics of MAXBLEND and double helical ribbons, 565

Optimization
Application of optimal adaptive generalized predictive control to a packed distillation column, 389
Optimization methods
An efficient flash procedure using cubic equations of state, 201
Oxidative dehydrogenation
Oxidative dehydrogenation of butane using inert membrane reactor with a non-uniform permeation pattern, 497
Oxygen transfer
Axial inhomogeneities in steady-state dissolved oxygen in airlift bioreactors: predictive models, 43
Oxygenated aromatic compounds (OACs)
Oxygenated aromatic compounds from renewable resources: motivation, opportunities, and adsorptive separations, 133
Oxynator
Comparison of aerodynamics and mixing mechanisms of three mixers: Oxynator™ gas–gas mixer, KMA and SMI static mixers, 343

Packed columns
A capacity model for vertical pipes and packed columns based on entrainment, 355
A comprehensive model for the pressure drop in vertical pipes and packed columns, 367
Packed distillation
Application of optimal adaptive generalized predictive control to a packed distillation column, 389
Parallel reactions
Application of an integral method to modelling of laminar micromixing, 413
Partial differential equations
Applications of a moving finite element method, 23
Particle
Particle transport by jet pump in a new liquid–solid circulating moving bed reactor, 491
Peak frequency
Characterization of slurry systems by ultrasonic techniques, 215
Pectin
Ultrafiltration studies on solutions of pectin, glucose and their mixtures in a pilot scale crossflow membrane unit, 557
Perforated spargers
Gas hold-up profiles in foaming liquids in bubble columns, 247
Performance
A model for performance prediction of hydrocyclones, 7
Permeability
A new diffusion and flow theory for activated carbon from low pressure to capillary condensation range, 295
Experimental study of hydrogen, carbon dioxide and nitrogen permeation through a microporous silica membrane, 593
Phase equilibria
An efficient flash procedure using cubic equations of state, 201
Modeling of microemulsion phase diagrams from excess Gibbs energy models, 257
Phase resistance
Mass transfer with chemical reaction in conditions of spontaneous interfacial convection in processes of liquid extraction, 321
Phase transitions
Phase transitions in a bed of vanadium catalyst for sulfuric acid production: experiment and modeling, 31
Phenomenological simulation model
Phenomenological simulation model for gas hold-ups and volumetric mass transfer coefficients in external-loop airlift reactors, 599
Pilot plant
COD removal from textile industry effluent: pilot plant studies, 125
Pitched blade turbines
Suspension of floating solids with up-pumping pitched blade impellers; mixing time and power characteristics, 325
Pith
Film-pore diffusion modeling and contact time optimization for the adsorption of dyestuffs on pith, 77
Plug flow
An experimental study of fluid catalytic cracking in a downer reactor, 517
Plug flow model
Modelling of catalytically stabilised thermal combustion of chlorinated hydrocarbons, 525
Pollutant removal
Sardinian natural clinoptilolites for heavy metals and ammonium removal: experimental and modeling, 275
Polynomial approximations
Applications of a moving finite element method, 23
Polyurethane foam
Solid-state fermentation and bioremediation: development of a continuous process for the production of fungal tannase, 115
Porous pipe
Analytical solution of flow coefficients for a uniformly distributed porous channel, 1
Power draw
The unsparged power demand of modern gas dispersing impeller in boiling liquids, 15
Power law fluid
Laminar convection of non-Newtonian fluids in the thermal entrance region of coiled circular tubes, 223
Modelling of a coiled tubular chemical reactor, 437
Pressure drop
A comprehensive model for the pressure drop in vertical pipes and packed columns, 367

Pressure swing adsorption
Applications of a moving finite element method, 23
PRO/II
New process for separating propylene and propane by extractive distillation with aqueous acetonitrile, 581
Propane
New process for separating propylene and propane by extractive distillation with aqueous acetonitrile, 581
Propylene
New process for separating propylene and propane by extractive distillation with aqueous acetonitrile, 581
Pyrolysis
Adsorption kinetics for the removal of chromium(VI) from aqueous solution by adsorbents derived from used tyres and sawdust, 95
Radial flow reactor
Analytical solution of flow coefficients for a uniformly distributed porous channel, 1
Reactive extrusion
Application of an integral method to modelling of laminar micromixing, 413
Reactor
Investigation of the interaction of velocity and concentration fields by coupling LDV to conductivity probe in a continuous stirred tank reactor (CSTR), 239
Theoretical analysis of a packed bed membrane reactor, 475

Recombinant fermentation
A simulation study of dynamic neural filtering and control of a fed-batch bioreactor under nonideal conditions, 533
Recycling
Innovations in separations technology for the recycling and re-use of liquid waste streams, 149
Reduced lumped mechanism
Modelling of catalytically stabilised thermal combustion of chlorinated hydrocarbons, 525
Renewable resources
Oxygenated aromatic compounds from renewable resources: motivation, opportunities, and adsorptive separations, 133

Sawdust
Adsorption kinetics for the removal of chromium(VI) from aqueous solution by adsorbents derived from used tyres and sawdust, 95
Scale-down
CMA: integration of fluid dynamics and microbial kinetics in modelling of large-scale fermentations, 463
Secondary flow
Laminar convection of non-Newtonian fluids in the thermal entrance region of coiled circular tubes, 223
Modelling of a coiled tubular chemical reactor, 437
Separations
Oxygenated aromatic compounds from renewable resources: motivation, opportunities, and adsorptive separations, 133
Sheep manure waste (SMW)
Zinc adsorption from aqueous solutions using disposal sheep manure waste (SMW), 543
Sherwood number
Radiation effects on free convection flow past a semi-infinite vertical plate with mass transfer, 335
Silica
Experimental study of hydrogen, carbon dioxide and nitrogen permeation through a microporous silica membrane, 593
Slant-hole tray
New process for separating propylene and propane by extractive distillation with aqueous acetonitrile, 581
Slurry
Characterization of slurry systems by ultrasonic techniques, 215
Solids concentration
Characterization of slurry systems by ultrasonic techniques, 215
Solids density
Oxygen mass transfer in a high solids loading three-phase internal-loop airlift reactor, 57
Solids loading
Oxygen mass transfer in a high solids loading three-phase internal-loop airlift reactor, 57
Solvent extraction
Innovations in separations technology for the recycling and re-use of liquid waste streams, 149
Sparger design
Gas hold-up profiles in foaming liquids in bubble columns, 247
Spontaneous interfacial convection
Mass transfer with chemical reaction in conditions of spontaneous interfacial convection in processes of liquid extraction, 321
SSF process
Solid-state fermentation and bioremediation: development of a continuous process for the production of fungal tannase, 115
Static
Classification of static and dynamic behavior in a fluidized-bed catalytic reactor, 503
Sulfur dioxide
Sulfur dioxide absorption and desorption by water drops, 577
Supported catalyst
A moment technique for adsorption rate on metal surfaces of supported catalysts. CO adsorption on Pt–Al_2O_3 washcoated monolith, 429
Surface activity
Mass transfer with chemical reaction in conditions of spontaneous interfacial convection in processes of liquid extraction, 321
Surfactants
Electrostatic enhancement of coalescence of water droplets in oil: a review of the current understanding, 173
Suspension
Suspension of floating solids with up-pumping pitched blade impellers; mixing time and power characteristics, 325

Tannase
Solid-state fermentation and bioremediation: development of a continuous process for the production of fungal tannase, 115
Temperature-dependent viscosity
Estimating the onset of natural convection in a horizontal layer of a fluid with a temperature-dependent viscosity, 63
Tertiary oil recovery
Modeling of microemulsion phase diagrams from excess Gibbs energy models, 257
Textile process effluent
COD removal from textile industry effluent: pilot plant studies, 125
Thermally and catalytically stabilised thermal combustion
Modelling of catalytically stabilised thermal combustion of chlorinated hydrocarbons, 525
Thermodynamic parameters
Adsorption kinetics for the removal of chromium(VI) from aqueous solution by adsorbents derived from used tyres and sawdust, 95
Three-phase circulating fluidized bed
Bubble behavior in gas–liquid–solid three-phase circulating fluidized beds, 397
Experimental study on gas–liquid interfacial area and mass transfer coefficient in three-phase circulating fluidized beds, 485
Tomography
Gas hold-up profiles in foaming liquids in bubble columns, 247
Torque
Suspension of floating solids with up-pumping pitched blade impellers; mixing time and power characteristics, 325

Transport
Particle transport by jet pump in a new liquid–solid circulating moving bed reactor, 491
Tubular ultrafiltration
Ultrafiltration studies on solutions of pectin, glucose and their mixtures in a pilot scale crossflow membrane unit, 557
Turbulence
Investigation of the interaction of velocity and concentration fields by coupling LDV to conductivity probe in a continuous stirred tank reactor (CSTR), 239

Ultrasonic
Characterization of slurry systems by ultrasonic techniques, 215
Used tyres
Adsorption kinetics for the removal of chromium(VI) from aqueous solution by adsorbents derived from used tyres and sawdust, 95

Vanadium catalysts
Phase transitions in a bed of vanadium catalyst for sulfuric acid production: experiment and modeling, 31
Vapor–liquid equilibria
Generalization of composition-dependent mixing rules for multicomponent systems: prediction of vapor–liquid and liquid–liquid equilibria, 283
Vertical tubes
A capacity model for vertical pipes and packed columns based on entrainment, 355
A comprehensive model for the pressure drop in vertical pipes and packed columns, 367
Viscous liquids
Application of an integral method to modelling of laminar micromixing, 413
Volumetric heat transfer coefficient
Heat transfer in gas–liquid–liquid three-phase direct-contact exchanger, 381
Volumetric mass transfer coefficient
Phenomenological simulation model for gas hold-ups and volumetric mass transfer coefficients in external-loop airlift reactors, 599

Waste treatment
Innovations in separations technology for the recycling and re-use of liquid waste streams, 149
Water-in-oil emulsion
Electrostatic enhancement of coalescence of water droplets in oil: a review of the current understanding, 173

Zeolites
Verification of the Maxwell–Stefan theory for mixture diffusion in zeolites by comparison with MD simulations, 207
