
Subject Index of Volume 96

Absorption

- A high capacity manganese-based sorbent for regenerative high temperature desulfurization with direct sulfur production. Conceptual process application to coal gas cleaning, 223

Adsorption

- Modeling the adsorption of mercury in the flue gas of sewage sludge incineration, 197

Agglomeration

- Agglomeration in bio-fuel fired fluidized bed combustors, 171

Artificial neural networks

- Generalized dynamic modeling of local heat transfer in bubble columns, 37

Autocovariances

- Linear versus nonlinear time series analysis—smoothed correlation integrals, 99

Biomass

- Agglomeration in bio-fuel fired fluidized bed combustors, 171

Bubble column

- Effect of viscosity on homogeneous–heterogeneous flow regime transition in bubble columns, 15

Bubble columns

- Generalized dynamic modeling of local heat transfer in bubble columns, 37

Calcination

- Enhancement of CaO for CO₂ capture in an FBC environment, 187

CaO

- Enhancement of CaO for CO₂ capture in an FBC environment, 187

Carbonation

- Enhancement of CaO for CO₂ capture in an FBC environment, 187

Catalyst particle lyophobicity

- Mechanisms of physical and reaction enhancement of mass transfer in a gas inducing stirred slurry reactor, 55

Ceramic membranes

- Effect of fluidization conditions on the membrane permeation rate in a membrane assisted fluidized bed, 125

CFB

- Local air ratio measured by zirconia cell in a circulating fluidised bed furnace, 145

CFD simulation

- CFD simulation of concurrent-up gas–solid flow in circulating fluidized beds with structure-dependent drag coefficient, 71

Chaos

- Characterization of dynamic behaviour in gas–solid turbulent fluidized bed using chaos and wavelet analyses, 105
- Structuring chaotic fluidized beds, 117

Chaos-order transition

- Structuring chaotic fluidized beds, 117

Circulating fluidised bed boiler

- Local air ratio measured by zirconia cell in a circulating fluidised bed furnace, 145

Circulating fluidized bed

- Theoretical analysis of the flow regimes and their characteristics in vertically flowing gas–solids suspensions, 133

CO₂

- Enhancement of CaO for CO₂ capture in an FBC environment, 187

Coal combustion

- An experimental and modeling study of the contribution of coal ash to SO₂ capture in fluidized bed combustion, 157

Computational Fluid Dynamics

- CFD modelling and experimental validation of particle-to-fluid mass and heat transfer in a packed bed at very low channel to particle diameter ratio, 3

Computational fluid dynamics

- Methods for multiphase computational fluid dynamics, 81

Correlation integrals

- Linear versus nonlinear time series analysis—smoothed correlation integrals, 99

Defluidization

- Agglomeration in bio-fuel fired fluidized bed combustors, 171

Dimension

- Linear versus nonlinear time series analysis—smoothed correlation integrals, 99

Drag coefficient

- CFD simulation of concurrent-up gas–solid flow in circulating fluidized beds with structure-dependent drag coefficient, 71

Dusty gas model

- Effect of fluidization conditions on the membrane permeation rate in a membrane assisted fluidized bed, 125

Dynamic modeling

- Generalized dynamic modeling of local heat transfer in bubble columns, 37

Electric fields

- Structuring chaotic fluidized beds, 117

Entropy

- Linear versus nonlinear time series analysis—smoothed correlation integrals, 99

Flow regime

- Effect of viscosity on homogeneous–heterogeneous flow regime transition in bubble columns, 15

Flow regimes

- Theoretical analysis of the flow regimes and their characteristics in vertically flowing gas–solids suspensions, 133

Flow structure

- Theoretical analysis of the flow regimes and their characteristics in vertically flowing gas–solids suspensions, 133

Flue gas

- Modeling the adsorption of mercury in the flue gas of sewage sludge incineration, 197

Fluidization

- Hydrodynamics and mass transfer in a lab-scale three-phase internal loop airlift, 45

- CFD simulation of concurrent-up gas–solid flow in circulating fluidized beds with structure-dependent drag coefficient, 71

- Characterization of dynamic behaviour in gas–solid turbulent fluidized bed using chaos and wavelet analyses, 105
- Fluidized bed
 - Structuring chaotic fluidized beds, 117
- Fluidized bed combustion
 - Agglomeration in bio-fuel fired fluidized bed combustors, 171
 - Enhancement of CaO for CO₂ capture in an FBC environment, 187
- Fractal
 - Structuring chaotic fluidized beds, 117
- Fuel
 - A high capacity manganese-based sorbent for regenerative high temperature desulfurization with direct sulfur production. Conceptual process application to coal gas cleaning, 223
- Gases
 - A high capacity manganese-based sorbent for regenerative high temperature desulfurization with direct sulfur production. Conceptual process application to coal gas cleaning, 223
- Gas–liquid mass transfer
 - Gas–liquid mass transfer in slurry bubble systems. I. Mathematical modeling based on a single bubble mechanism, 23
 - Gas–liquid mass transfer in slurry bubble systems. II. Verification and simulation of the model based on the single bubble mechanism, 29
- Gas–liquid mass transfer mechanisms
 - Mechanisms of physical and reaction enhancement of mass transfer in a gas inducing stirred slurry reactor, 55
- Gas–liquid–solids system
 - Hydrodynamics and mass transfer in a lab-scale three-phase internal loop airlift, 45
- Gas–solid flow
 - CFD simulation of concurrent-up gas–solid flow in circulating fluidized beds with structure-dependent drag coefficient, 71
- Gas–solids suspensions
 - Theoretical analysis of the flow regimes and their characteristics in vertically flowing gas–solids suspensions, 133
- Glucose oxidation
 - Mechanisms of physical and reaction enhancement of mass transfer in a gas inducing stirred slurry reactor, 55
- Hydrodynamics
 - Effect of fluidization conditions on the membrane permeation rate in a membrane assisted fluidized bed, 125
- Incineration
 - The environmental performance of alternative solid waste management options: a life cycle assessment study, 207
- Instantaneous heat transfer
 - Generalized dynamic modeling of local heat transfer in bubble columns, 37
- Interfacial area
 - Gas–liquid mass transfer in slurry bubble systems. II. Verification and simulation of the model based on the single bubble mechanism, 29
- Internal loop airlift
 - Hydrodynamics and mass transfer in a lab-scale three-phase internal loop airlift, 45
- Landfill
 - The environmental performance of alternative solid waste management options: a life cycle assessment study, 207
- Life cycle assessment
 - The environmental performance of alternative solid waste management options: a life cycle assessment study, 207
- Low channel-to-particle-diameter ratio
 - CFD modelling and experimental validation of particle-to-fluid mass and heat transfer in a packed bed at very low channel to particle diameter ratio, 3
- Manganese aluminate
 - A high capacity manganese-based sorbent for regenerative high temperature desulfurization with direct sulfur production. Conceptual process application to coal gas cleaning, 223
- Mass and heat transfer
 - CFD modelling and experimental validation of particle-to-fluid mass and heat transfer in a packed bed at very low channel to particle diameter ratio, 3
- Mass transfer
 - Hydrodynamics and mass transfer in a lab-scale three-phase internal loop airlift, 45
- Mathematical model
 - Gas–liquid mass transfer in slurry bubble systems. I. Mathematical modeling based on a single bubble mechanism, 23
 - Gas–liquid mass transfer in slurry bubble systems. II. Verification and simulation of the model based on the single bubble mechanism, 29
- Membrane assisted fluidized bed
 - Effect of fluidization conditions on the membrane permeation rate in a membrane assisted fluidized bed, 125
- Mercury
 - Modeling the adsorption of mercury in the flue gas of sewage sludge incineration, 197
- α -Methyl styrene hydrogenation
 - Mechanisms of physical and reaction enhancement of mass transfer in a gas inducing stirred slurry reactor, 55
- Modeling
 - An experimental and modeling study of the contribution of coal ash to SO₂ capture in fluidized bed combustion, 157
- Multiphase flow
 - Methods for multiphase computational fluid dynamics, 81
- Multiphase flow equations
 - Theoretical analysis of the flow regimes and their characteristics in vertically flowing gas–solids suspensions, 133
- Multi-scale
 - CFD simulation of concurrent-up gas–solid flow in circulating fluidized beds with structure-dependent drag coefficient, 71
- Nonlinear analysis
 - Generalized dynamic modeling of local heat transfer in bubble columns, 37
- Non-linear dynamics
 - Characterization of dynamic behaviour in gas–solid turbulent fluidized bed using chaos and wavelet analyses, 105
- Packed bed reactor
 - CFD modelling and experimental validation of particle-to-fluid mass and heat transfer in a packed bed at very low channel to particle diameter ratio, 3
- Power spectrum
 - Linear versus nonlinear time series analysis—smoothed correlation integrals, 99
- Processing
 - A high capacity manganese-based sorbent for regenerative high temperature desulfurization with direct sulfur production. Conceptual process application to coal gas cleaning, 223
- Regime transitions
 - Hydrodynamics and mass transfer in a lab-scale three-phase internal loop airlift, 45
- Self-assembly
 - Structuring chaotic fluidized beds, 117
- Single bubble mechanism
 - Gas–liquid mass transfer in slurry bubble systems. I. Mathematical modeling based on a single bubble mechanism, 23

- Slurry bubble column
Gas–liquid mass transfer in slurry bubble systems. II. Verification and simulation of the model based on the single bubble mechanism, 29
- Slurry bubble system
Gas–liquid mass transfer in slurry bubble systems. I. Mathematical modeling based on a single bubble mechanism, 23
- Solid waste management
The environmental performance of alternative solid waste management options: a life cycle assessment study, 207
- Stability
Effect of viscosity on homogeneous–heterogeneous flow regime transition in bubble columns, 15
- Stirred slurry reactor
Mechanisms of physical and reaction enhancement of mass transfer in a gas inducing stirred slurry reactor, 55
- Structured packing
CFD modelling and experimental validation of particle-to-fluid mass and heat transfer in a packed bed at very low channel to particle diameter ratio, 3
- Structured reactors
Structuring chaotic fluidized beds, 117
- Sulfur
A high capacity manganese-based sorbent for regenerative high temperature desulfurization with direct sulfur production. Conceptual process application to coal gas cleaning, 223
- Sulfur retention by ash
An experimental and modeling study of the contribution of coal ash to SO₂ capture in fluidized bed combustion, 157
- Time-series analysis
Characterization of dynamic behaviour in gas–solid turbulent fluidized bed using chaos and wavelet analyses, 105
- Turbulent flow regime
Characterization of dynamic behaviour in gas–solid turbulent fluidized bed using chaos and wavelet analyses, 105
- Two-fluid model
CFD simulation of concurrent-up gas–solid flow in circulating fluidized beds with structure-dependent drag coefficient, 71
- Viscosity
Effect of viscosity on homogeneous–heterogeneous flow regime transition in bubble columns, 15
- Wavelet transform
Characterization of dynamic behaviour in gas–solid turbulent fluidized bed using chaos and wavelet analyses, 105
- Zirconia cell sensor
Local air ratio measured by zirconia cell in a circulating fluidised bed furnace, 145
