Subject Index of Volume 111

Aggregation
Forward light scattering to characterise structure of flocs composed of large particles, 145
Atrazine
Removal of pesticides from soil by supercritical extraction—a preliminary study, 167
Attrition
Characterisation of an attrition scrubber for the removal of high molecular weight contaminants in sand, 71

Batchelor model
Applications of polydisperse sedimentation models, 105
Benzene oxidation
Deactivation of zeolite catalysts for benzene oxidation to phenol, 1
Blood separation
Magnetic classification in health sciences and in chemical engineering, 85
Bubble column
Effect of fiber type on gas holdup in a cocurrent air–water–fiber bubble column, 21
By-product of magnesite production (BMP)
Kinetics of phosphorus removal and struvite formation by the utilization of by-product of magnesium oxide production, 45

Catalysis
Magnetic classification in health sciences and in chemical engineering, 85
Centrifugation
Numerical identification of parameters for a flocculated suspension from concentration measurements during batch centrifugation, 91
Ceramic membrane
Treatment of titanium white waste acid using ceramic microfiltration membrane, 31
Chemical reactors
Estimation of trickle-to-pulse flow regime transition and pressure drop in high-pressure trickle bed reactors with organic liquids, 5
Clarification
Treatment of titanium white waste acid using ceramic microfiltration membrane, 31
Clarifier–thickener units
Mathematical model and numerical simulation of the dynamics of flocculated suspensions in clarifier–thickeners, 119
Coking
Deactivation of zeolite catalysts for benzene oxidation to phenol, 1
Compressive rheology
Steady state thickener modelling from the compressive yield stress and hindered settling function, 253
Compressive yield stress
Steady state thickener modelling from the compressive yield stress and hindered settling function, 253
Critical pore length
Permeability–porosity relationship from a geometrical model of shrinking and lattice Boltzmann and Monte Carlo simulations of flow in two-dimensional pore networks, 225
Crossflow filtration
Physico-mathematical modeling of crossflow filtration, 199

Deactivation
Deactivation of zeolite catalysts for benzene oxidation to phenol, 1
Decoloration
Evaluation of a novel electrochemical pilot plant process for azodyes removal from textile wastewater, 63
Degenerate diffusion
Mathematical model and numerical simulation of the dynamics of flocculated suspensions in clarifier–thickeners, 119
Degradation
Evaluation of a novel electrochemical pilot plant process for azodyes removal from textile wastewater, 63
Design concepts
Ozone transfer and design concepts for NOM decolourization in tubular membrane contactor, 53
Dewatering
Further development of software for the design and simulation of industrial thickeners, 135
Steady state thickener modelling from the compressive yield stress and hindered settling function, 253
Discharge angle
Numerical prediction of outlet velocity patterns in solid–liquid separators, 173
Discontinuous flux
Mathematical model and numerical simulation of the dynamics of flocculated suspensions in clarifier–thickeners, 119
Dissolved oxygen
Fuzzy control of dissolved oxygen in a sequencing batch reactor pilot plant, 13
Drainage
Pore-level modeling of isothermal drying of pore networks. Effects of gravity and pore shape and size distributions on saturation and transport parameters, 237
Drying front
Pore-level modeling of isothermal drying of pore networks. Effects of gravity and pore shape and size distributions on saturation and transport parameters, 237

Efficient and robust control
Fuzzy control of dissolved oxygen in a sequencing batch reactor pilot plant, 13
Effluent treatment
Magnetic classification in health sciences and in chemical engineering, 85
Electrochemical treatment
Evaluation of a novel electrochemical pilot plant process for azodyes removal from textile wastewater, 63

doi:10.1016/S1385-8947(05)00267-6

Evaporation
Pore-level modeling of isothermal drying of pore networks. Effects of gravity and pore shape and size distributions on saturation and transport parameters, 237

Fiber suspension
Effect of fiber type on gas holdup in a cocurrent air–water–fiber bubble column, 21
Film flow
Pore-level modeling of isothermal drying of pore networks. Effects of gravity and pore shape and size distributions on saturation and transport parameters, 237
Finite-difference scheme
Mathematical model and numerical simulation of the dynamics of flocculated suspensions in clarifier–thickeners, 119
First-order kinetics
Kinetics of phosphorus removal and struvite formation by the utilization of by-product of magnesium oxide production, 45
Floc
In situ measurement of fractal dimension using focussed beam reflectance measurement, 181
Flocculated suspensions
Numerical identification of parameters for a flocculated suspension from concentration measurements during batch centrifugation, 91
Flocculation
Forward light scattering to characterise structure of flocs composed of large particles, 145
Flow map
Estimation of trickle-to-pulse flow regime transition and pressure drop in high-pressure trickle bed reactors with organic liquids, 5
Fluidization
Applications of polydisperse sedimentation models, 105
Fractal
Forward light scattering to characterise structure of flocs composed of large particles, 145
Fuzzy logic
Fuzzy control of dissolved oxygen in a sequencing batch reactor pilot plant, 13

Gas holdup
Effect of fiber type on gas holdup in a cocurrent air–water–fiber bubble column, 21
Gravity effect
Pore-level modeling of isothermal drying of pore networks. Effects of gravity and pore shape and size distributions on saturation and transport parameters, 237

Heap leaching
Flow through porous media with applications to heap leaching of copper ores, 151
Heating rate
Thermal degradation kinetics of poly(ethylene terephthalate) from waste soft drinks bottles, 39
Hindered settling function
Steady state thickener modelling from the compressive yield stress and hindered settling function, 253
Hydrocyclone design
Numerical prediction of outlet velocity patterns in solid–liquid separators, 173
Hydrocyclone
An investigation of the effect of the particle–fluid and particle–particle interactions on the flow within a hydrocyclone, 189
The role of wave propagation in hydrocyclone operations I: An axisymmetric streamfunction formulation for a conical hydrocyclone, 205
The role of wave propagation in hydrocyclone operations II. Wave propagation in the air–water interface of a conical hydrocyclone, 213
Hydrodynamics
Effect of fiber type on gas holdup in a cocurrent air–water–fiber bubble column, 21

Light scattering
Forward light scattering to characterise structure of flocs composed of large particles, 145

Magnetic classification
Magnetic classification in health sciences and in chemical engineering, 85
Magnetic separation
Magnetic classification in health sciences and in chemical engineering, 85
Membrane contactor
Ozone transfer and design concepts for NOM decolourization in tubular membrane contactor, 53
Microfiltration
Treatment of titanium white waste acid using ceramic microfiltration membrane, 31
MLB model
Applications of polydisperse sedimentation models, 105
Modeling
Further development of software for the design and simulation of industrial thickeners, 135
Multiphase flow
Effect of fiber type on gas holdup in a cocurrent air–water–fiber bubble column, 21

Nitrous oxide
Deactivation of zeolite catalysts for benzene oxidation to phenol, 1
NOM decolourization
Ozone transfer and design concepts for NOM decolourization in tubular membrane contactor, 53
Non-Newtonian
Physico-mathematical modeling of crossflow filtration, 199
Numerical simulation
Mathematical model and numerical simulation of the dynamics of flocculated suspensions in clarifier–thickeners, 119
Numerical prediction of outlet velocity patterns in solid–liquid separators, 173
Numerical technique
Numerical identification of parameters for a flocculated suspension from concentration measurements during batch centrifugation, 91

Operating parameters
Treatment of titanium white waste acid using ceramic microfiltration membrane, 31
Ozone
Ozone transfer and design concepts for NOM decolourization in tubular membrane contactor, 53

Parameter identification
Numerical identification of parameters for a flocculated suspension from concentration measurements during batch centrifugation, 91
Particle-fluid interaction
An investigation of the effect of the particle–fluid and particle–particle interactions on the flow within a hydrocyclone, 189
Permeability–porosity relation
Permeability–porosity relationship from a geometrical model of shrinking and lattice Boltzmann and Monte Carlo simulations of flow in two-dimensional pore networks, 225
Pesticides
Removal of pesticides from soil by supercritical extraction—a preliminary study, 167
PET
Thermal degradation kinetics of poly(ethylene terephthalate) from waste soft drinks bottles, 39

Phenol
Deactivation of zeolite catalysts for benzene oxidation to phenol, 1
Phosphorus removal
Kinetics of phosphorus removal and struvite formation by the utilization of by-product of magnesium oxide production, 45
Physico-mathematical modeling
Physico-mathematical modeling of crossflow filtration, 199
Pilot plant
Evaluation of a novel electrochemical pilot plant process for azodyes removal from textile wastewater, 63
Polydisperse suspension
Applications of polydisperse sedimentation models, 105
Polystyrene latex
In situ measurement of fractal dimension using focussed beam reflectance measurement, 181
Pore size and shape effect
Pore-level modeling of isothermal drying of pore networks. Effects of gravity and pore shape and size distributions on saturation and transport parameters, 237
Pore space microstructure transitions
Permeability–porosity relationship from a geometrical model of shrinking and lattice Boltzmann and Monte Carlo simulations of flow in two-dimensional pore networks, 225
Pore-level drying
Pore-level modeling of isothermal drying of pore networks. Effects of gravity and pore shape and size distributions on saturation and transport parameters, 237
Pore-level flow
Permeability–porosity relationship from a geometrical model of shrinking and lattice Boltzmann and Monte Carlo simulations of flow in two-dimensional pore networks, 225
Porous Media
Flow through porous media with applications to heap leaching of copper ores, 151
Pressure drop
Estimation of trickle-to-pulse flow regime transition and pressure drop in high-pressure trickle bed reactors with organic liquids, 5
Pyrolysis
Thermal degradation kinetics of poly(ethylene terephthalate) from waste soft drinks bottles, 39

Reflectance
In situ measurement of fractal dimension using focussed beam reflectance measurement, 181
Remediation
Characterisation of an attrition scrubber for the removal of high molecular weight contaminants in sand, 71

Sand
Characterisation of an attrition scrubber for the removal of high molecular weight contaminants in sand, 71
SBR pilot plant
Fuzzy control of dissolved oxygen in a sequencing batch reactor pilot plant, 13
Scrubbing
Characterisation of an attrition scrubber for the removal of high molecular weight contaminants in sand, 71
Shear yield stress
Steady state thickener modelling from the compressive yield stress and hindered settling function, 253
Simulation
Further development of software for the design and simulation of industrial thickeners, 135
Soil decontamination
Removal of pesticides from soil by supercritical extraction—a preliminary study, 167
Solid matrices
Removal of pesticides from soil by supercritical extraction—a preliminary study, 167
Solid–liquid separators
Numerical prediction of outlet velocity patterns in solid–liquid separators, 173
Stabilized finite element
The role of wave propagation in hydrocyclone operations I: An axisymmetric streamfunction formulation for a conical hydrocyclone, 205
Stationary solutions
Mathematical model and numerical simulation of the dynamics of flocculated suspensions in clarifier–thickeners, 119
Steady state thickener modelling
Steady state thickener modelling from the compressive yield stress and hindered settling function, 253
Streamfunction
The role of wave propagation in hydrocyclone operations I: An axisymmetric streamfunction formulation for a conical hydrocyclone, 205
Struvite
Kinetics of phosphorus removal and struvite formation by the utilization of by-product of magnesium oxide production, 45
Supercritical extraction
Removal of pesticides from soil by supercritical extraction—a preliminary study, 167

Tailings
Further development of software for the design and simulation of industrial thickeners, 135
Temperature effect
Ozone transfer and design concepts for NOM decolourization in tubular membrane contactor, 53
TGA
Thermal degradation kinetics of poly(ethylene terephthalate) from waste soft drinks bottles, 39
Thermal degradation
Thermal degradation kinetics of poly(ethylene terephthalate) from waste soft drinks bottles, 39
Thickening
Further development of software for the design and simulation of industrial thickeners, 135
Time of reaction
Kinetics of phosphorus removal and struvite formation by the utilization of by-product of magnesium oxide production, 45
Time-scale analysis
An investigation of the effect of the particle–fluid and particle–particle interactions on the flow within a hydrocyclone, 189
Titanium white waste acid
Treatment of titanium white waste acid using ceramic microfiltration membrane, 31
Trickle bed reactor
Estimation of trickle-to-pulse flow regime transition and pressure drop in high-pressure trickle bed reactors with organic liquids, 5
Two-phase flow
Flow through porous media with applications to heap leaching of copper ores, 151

Uniqueness
Mathematical model and numerical simulation of the dynamics of flocculated suspensions in clarifier–thickeners, 119

Wastewater treatment plant
Fuzzy control of dissolved oxygen in a sequencing batch reactor pilot plant, 13
Wave motion
The role of wave propagation in hydrocyclone operations II. Wave propagation in the air–water interface of a conical hydrocyclone, 213
