Subject Index of Volume 117

Acid dyes
Adsorption behaviors of acid and basic dyes on crosslinked amphoteric starch, 161
Activated sludge
Two-step modeling of the biodegradation of phenol by an acclimated activated sludge, 245
Adsorbed phase diffusion
Modeling of a gas catalytic chemical reaction, taking into account the diffusion in the adsorbed phase, 31
Adsorbent
Biosorption of Cr(VI) from aqueous solutions by *Eichhornia crassipes*, 71
Adsorbent characterisation
Investigations on the adsorption of acidic gases using activated dolomite, 239
Adsorption
Combined adsorption and ion exchange equilibrium of phenol on Amberlite IRA-420, 155
Adsorption behaviors of acid and basic dyes on crosslinked amphoteric starch, 161
Investigations on the adsorption of acidic gases using activated dolomite, 239
Agitated dispersion
Comparison of mean drop sizes and drop size distributions in agitated liquid–liquid dispersions produced by disk and open type impellers, 117
Amphoteric starch
Adsorption behaviors of acid and basic dyes on crosslinked amphoteric starch, 161
Analytical model
Transport study of pure and mixed gases through PDMS membrane, 51
α-Pinene isomerization
α-Pinene isomerization to camphene. Effect of thermal treatment on sulfated zirconia, 93
Atomization
Development of a new technology for the production of microcapsules based in atomization processes, 137
Axial dispersion coefficient
CFD simulation of homogeneous reactions in turbulent pipe flows—Tubular non-catalytic reactors, 23
Axial dispersion model
Axial dispersion model for solid flow in liquid suspension in system of two mixers in total recycle, 101

Bagasse fly ash (BFA)
Equilibrium modelling of single and binary adsorption of cadmium and nickel onto bagasse fly ash, 79
Basic dyes
Adsorption behaviors of acid and basic dyes on crosslinked amphoteric starch, 161
Batch processes
Optimisation of solvent replacement procedures according to economic and environmental criteria, 169
Bimetallic Pd–Ag catalysts
Pd–Ag/SiO_2 xerogel catalyst forming by impregnation on alumina foams, 13
Binary adsorption
Equilibrium modelling of single and binary adsorption of cadmium and nickel onto bagasse fly ash, 79
Biodegradation
Two-step modeling of the biodegradation of phenol by an acclimated activated sludge, 245
Biosorption
Biosorption of Cr(VI) from aqueous solutions by *Eichhornia crassipes*, 71
Breakthrough curve
Removal of Cr^{3+} in fixed bed using zeolite NaY, 253
Bubble diameter
Multi-scale modeling of gas–liquid–solid three-phase fluidized beds using the EMMS method, 1
Bubble wake
Multi-scale modeling of gas–liquid–solid three-phase fluidized beds using the EMMS method, 1

Cadmium(II)
Equilibrium modelling of single and binary adsorption of cadmium and nickel onto bagasse fly ash, 79
Camphene
α-Pinene isomerization to camphene. Effect of thermal treatment on sulfated zirconia, 93
Carbon dioxide
Investigations on the adsorption of acidic gases using activated dolomite, 239
Catalytic reaction
Modeling of a gas catalytic chemical reaction, taking into account the diffusion in the adsorbed phase, 31
CFD
CFD simulation of homogeneous reactions in turbulent pipe flows—Tubular non-catalytic reactors, 23
Chaos analysis
Multi-scale flow behavior in gas–solids two-phase flow systems, 187
Chemical dissolution
Investigation of dissolution kinetics of natural magnesite in gluconic acid solutions, 109
Dissolution of periclase in excess of hydrochloric acid: Study of inhibiting effect of acid concentration on the dissolution rate, 205
Chromium
Removal of Cr^{3+} in fixed bed using zeolite NaY, 253
Cleaning
Solvent-based cleaning of emulsion polymerization reactors, 61
Control size
Development of a new technology for the production of microcapsules based in atomization processes, 137
Cr(VI) removal
Biosorption of Cr(VI) from aqueous solutions by *Eichhornia crassipes*, 71

Diffusion
A diffusional analysis for the oxidation on a plane metal–oxide interface, 143

doi:10.1016/S1385-8947(06)00072-6

Disk type impeller
Comparison of mean drop sizes and drop size distributions in agitated liquid–liquid dispersions produced by disk and open type impellers, 117
Dolomite
Investigations on the adsorption of acidic gases using activated dolomite, 239
Downer
Multi-scale flow behavior in gas–solids two-phase flow systems, 187
Drop size distribution
Comparison of mean drop sizes and drop size distributions in agitated liquid–liquid dispersions produced by disk and open type impellers, 117
Dynamic optimisation
Optimisation of solvent replacement procedures according to economic and environmental criteria, 169
Dynamic optimization of electrochemical reactors for the exact optimal control of consecutive electrochemical reactions, 213

Effective pressure drop
A theoretical model for calculating pressure drop in the cone area of light dispersion hydrocyclones, 231
Electrochemical reactor
Dynamic optimization of electrochemical reactors for the exact optimal control of consecutive electrochemical reactions, 213
EMMS model
Multi-scale modeling of gas–liquid–solid three-phase fluidized beds using the EMMS method, 1
Emulsion polymerization
Solvent-based cleaning of emulsion polymerization reactors, 61
Environment
Optimisation of solvent replacement procedures according to economic and environmental criteria, 169
Equilibrium data
Removal of Cr^{3+} in fixed bed using zeolite NaY, 253
Ethanol
Insight into steam reforming of ethanol to produce hydrogen for fuel cells, 39
Ethyl lactate
Reactive residue curve maps. A new study case, 123
Ethylene oxide
Large-scale fatty amine ethoxylation reactor: A dynamic model, 197
Exhaust gas recirculation
Sensitivity of process efficiency to reaction routes in exhaust-gas reforming of diesel fuel, 131

Fatty amine
Large-scale fatty amine ethoxylation reactor: A dynamic model, 197
Flow dynamics
Multi-scale flow behavior in gas–solids two-phase flow systems, 187
Forming
Pd–Ag/SiO_2 xerogel catalyst forming by impregnation on alumina foams, 13
Freundlich isotherm
Investigations on the adsorption of acidic gases using activated dolomite, 239
Fuel cells
Insight into steam reforming of ethanol to produce hydrogen for fuel cells, 39
Fuel reforming
Sensitivity of process efficiency to reaction routes in exhaust-gas reforming of diesel fuel, 131

Gas–liquid–solid
Multi-scale modeling of gas–liquid–solid three-phase fluidized beds using the EMMS method, 1
Gas–solids flow dynamics
Influence of magnetic field on the fluidization characteristics of circulating fluidized bed, 223
Gluconic acid
Investigation of dissolution kinetics of natural magnesite in gluconic acid solutions, 109

Heavy metal removal
Biosorption of Cr(VI) from aqueous solutions by *Eichhornia crassipes*, 71
High flux
Multi-scale flow behavior in gas–solids two-phase flow systems, 187
Homogeneous reaction
CFD simulation of homogeneous reactions in turbulent pipe flows—Tubular non-catalytic reactors, 23
Hydrochloric acid
Dissolution of periclase in excess of hydrochloric acid: Study of inhibiting effect of acid concentration on the dissolution rate, 205
Hydrocyclone
A theoretical model for calculating pressure drop in the cone area of light dispersion hydrocyclones, 231
Hydrodechlorination
Pd–Ag/SiO_2 xerogel catalyst forming by impregnation on alumina foams, 13
Hydrodynamics
Influence of magnetic field on the fluidization characteristics of circulating fluidized bed, 223
Hydrogen
Insight into steam reforming of ethanol to produce hydrogen for fuel cells, 39

Image analysis
Pd–Ag/SiO_2 xerogel catalyst forming by impregnation on alumina foams, 13
Inhibition
Two-step modeling of the biodegradation of phenol by an acclimated activated sludge, 245
Internal combustion
Sensitivity of process efficiency to reaction routes in exhaust-gas reforming of diesel fuel, 131
Ion exchange
Combined adsorption and ion exchange equilibrium of phenol on Amberlite IRA-420, 155

Kinetics
Investigation of dissolution kinetics of natural magnesite in gluconic acid solutions, 109

Landau transformation
A diffusional analysis for the oxidation on a plane metal–oxide interface, 143
Langmuir
Combined adsorption and ion exchange equilibrium of phenol on Amberlite IRA-420, 155
Liquid–liquid dispersion
Comparison of mean drop sizes and drop size distributions in agitated liquid–liquid dispersions produced by disk and open type impellers, 117
Low Reynolds number k–ε model
CFD simulation of homogeneous reactions in turbulent pipe flows—Tubular non-catalytic reactors, 23

Magnesite
Investigation of dissolution kinetics of natural magnesite in gluconic acid solutions, 109
Magnesium oxide
Dissolution of periclase in excess of hydrochloric acid: Study of inhibiting effect of acid concentration on the dissolution rate, 205
Magnetically assisted circulating fluidized bed
Influence of magnetic field on the fluidization characteristics of circulating fluidized bed, 223
Mechanism
Dissolution of periclase in excess of hydrochloric acid: Study of inhibiting effect of acid concentration on the dissolution rate, 205

Metabolic intermediates
Two-step modeling of the biodegradation of phenol by an acclimated activated sludge, 245
Metal–oxide interface
A diffusional analysis for the oxidation on a plane metal–oxide interface, 143
Methyl acetate
Reactive residue curve maps. A new study case, 123
Microencapsulation
Development of a new technology for the production of microcapsules based in atomization processes, 137
Mixed-gas permeation
Transport study of pure and mixed gases through PDMS membrane, 51
Mixing
Axial dispersion model for solid flow in liquid suspension in system of two mixers in total recycle, 101
Modeling
Modeling of a gas catalytic chemical reaction, taking into account the diffusion in the adsorbed phase, 31
Two-step modeling of the biodegradation of phenol by an acclimated activated sludge, 245
Monolith catalysts
Sensitivity of process efficiency to reaction routes in exhaust-gas reforming of diesel fuel, 131
MTBE
Reactive residue curve maps. A new study case, 123
Multi-component isotherms
Equilibrium modelling of single and binary adsorption of cadmium and nickel onto bagasse fly ash, 79
Multi-scale
Multi-scale flow behavior in gas–solids two-phase flow systems, 187
Multi-scale method
Multi-scale modeling of gas–liquid–solid three-phase fluidized beds using the EMMS method, 1

Nickel(II)
Equilibrium modelling of single and binary adsorption of cadmium and nickel onto bagasse fly ash, 79
Nitrogen dioxide
Investigations on the adsorption of acidic gases using activated dolomite, 239

On-site trial-plant
Solvent extraction process development and on-site trial-plant for phenol removal from industrial coal-gasification wastewater, 179
Open type impeller
Comparison of mean drop sizes and drop size distributions in agitated liquid–liquid dispersions produced by disk and open type impellers, 117
Optimal control
Dynamic optimization of electrochemical reactors for the exact optimal control of consecutive electrochemical reactions, 213
Oxidation
A diffusional analysis for the oxidation on a plane metal–oxide interface, 143

PDMS membrane
Transport study of pure and mixed gases through PDMS membrane, 51
Perturbation analysis
A diffusional analysis for the oxidation on a plane metal–oxide interface, 143
Pharmaceutical application
Optimisation of solvent replacement procedures according to economic and environmental criteria, 169
Phenol
Combined adsorption and ion exchange equilibrium of phenol on Amberlite IRA-420, 155
Solvent extraction process development and on-site trial-plant for phenol removal from industrial coal-gasification wastewater, 179
Two-step modeling of the biodegradation of phenol by an acclimated activated sludge, 245
Plug flow
Large-scale fatty amine ethoxylation reactor: A dynamic model, 197
Polyelectrolite complexes
Development of a new technology for the production of microcapsules based in atomization processes, 137
Polymers
Solvent-based cleaning of emulsion polymerization reactors, 61
Pontryagin maximum principle
Dynamic optimization of electrochemical reactors for the exact optimal control of consecutive electrochemical reactions, 213
Porosity
Pd–Ag/SiO_2 xerogel catalyst forming by impregnation on alumina foams, 13
Porous solid catalyst
Modeling of a gas catalytic chemical reaction, taking into account the diffusion in the adsorbed phase, 31
Pressure drop
A theoretical model for calculating pressure drop in the cone area of light dispersion hydrocyclones, 231
Pressure fluctuation
Multi-scale flow behavior in gas–solids two-phase flow systems, 187
Process design
Reactive residue curve maps. A new study case, 123
Process development
Solvent extraction process development and on-site trial-plant for phenol removal from industrial coal-gasification wastewater, 179

Rate
Dissolution of periclase in excess of hydrochloric acid: Study of inhibiting effect of acid concentration on the dissolution rate, 205
Reaction kinetics
Large-scale fatty amine ethoxylation reactor: A dynamic model, 197
Reactive distillation
Reactive residue curve maps. A new study case, 123
Residence time distribution
Axial dispersion model for solid flow in liquid suspension in system of two mixers in total recycle, 101
Residue curves
Reactive residue curve maps. A new study case, 123

Series of reactions
Dynamic optimization of electrochemical reactors for the exact optimal control of consecutive electrochemical reactions, 213
Simulation
Large-scale fatty amine ethoxylation reactor: A dynamic model, 197
Simultaneous metal removal
Equilibrium modelling of single and binary adsorption of cadmium and nickel onto bagasse fly ash, 79
Sol–gel process
Pd–Ag/SiO_2 xerogel catalyst forming by impregnation on alumina foams, 13
Solid–liquid flow
Axial dispersion model for solid flow in liquid suspension in system of two mixers in total recycle, 101
Solids concentration
Multi-scale flow behavior in gas–solids two-phase flow systems, 187
Solids distributions
Influence of magnetic field on the fluidization characteristics of circulating fluidized bed, 223
Solvent extraction
Solvent extraction process development and on-site trial-plant for phenol removal from industrial coal-gasification wastewater, 179
Solvent replacement
Optimisation of solvent replacement procedures according to economic and environmental criteria, 169
Steam reforming
Insight into steam reforming of ethanol to produce hydrogen for fuel cells, 39

Sulfated zirconia
α-Pinene isomerization to camphene. Effect of thermal treatment on sulfated zirconia, 93
Swelling
Solvent-based cleaning of emulsion polymerization reactors, 61

Theoretical model
A theoretical model for calculating pressure drop in the cone area of light dispersion hydrocyclones, 231
Three-phase fluidization
Multi-scale modeling of gas–liquid–solid three-phase fluidized beds using the EMMS method, 1
Transport phenomena
Transport study of pure and mixed gases through PDMS membrane, 51
Turbulent region
CFD simulation of homogeneous reactions in turbulent pipe flows—Tubular non-catalytic reactors, 23

Waste water treatment
Biosorption of Cr(VI) from aqueous solutions by *Eichhornia crassipes*, 71
Wastewater
Combined adsorption and ion exchange equilibrium of phenol on Amberlite IRA-420, 155
Water pollution control
Biosorption of Cr(VI) from aqueous solutions by *Eichhornia crassipes*, 71

Zeolite
Removal of Cr^{3+} in fixed bed using zeolite NaY, 253
