

Subject Index of Volume 120

- Acetic acid
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
- Acetone
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
- Activated alumina
Textural and fractal properties of CuO/Al₂O₃ catalyst supports, 55
- Aldol condensation
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
- Benzene oxidation
Effects of microwave radiation on one-step oxidation of benzene to phenol with nitrous oxide over Fe-ZSM-5 catalyst, 99
- Beta
Isomerization of *n*-butane to isobutane over Pt-modified Beta and ZSM-5 zeolite catalysts: Catalyst deactivation and regeneration, 83
- Bio-oil
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
- n*-Butane
Isomerization of *n*-butane to isobutane over Pt-modified Beta and ZSM-5 zeolite catalysts: Catalyst deactivation and regeneration, 83
- n*-Butane dehydrogenation
A comparison of catalyst deactivation of vanadia catalysts used for alkane dehydrogenation, 127
- Carbon deposition
Processes occurring during deactivation and regeneration of metal and metal oxide catalysts, 119
- Catalyst
Selective catalytic reduction of NO_x in real exhaust gas of gas engines using unburned gas: Catalyst deactivation and advances toward long-term stability, 17
Comparison between deactivation pattern of catalysts in fixed-bed and ebullating-bed residue hydroprocessing units, 33
- Catalyst activation
Modelling of carbon and hydrogen oxidation kinetics of a coked ferrierite catalyst, 63
- Catalyst deactivation
Study of catalytic behaviour and deactivation of vanadyl-aluminum binary phosphates in selective oxidation of *o*-xylene, 3
General equation for linear mechanisms of catalyst deactivation, 73
- Catalyst particle
The mechanism model of gas–liquid mass transfer enhancement by fine catalyst particles, 149
- Chaotic flow
Residence time distribution of a purely viscous non-Newtonian fluid in helically coiled or spatially chaotic flows, 181
- Characterization
Isomerization of *n*-butane to isobutane over Pt-modified Beta and ZSM-5 zeolite catalysts: Catalyst deactivation and regeneration, 83
- Chromatography
Micro-simulated moving bed (μ SMB) systems: A numerical study, 169
- Citrus
Water-based extraction of pectin from flavedo and albedo of orange peels, 203
- CO oxidation
Spent Pd catalyst—Component for oxide catalysts, designed for CO oxidation and NO reduction, 107
- Coke
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
Isomerization of *n*-butane to isobutane over Pt-modified Beta and ZSM-5 zeolite catalysts: Catalyst deactivation and regeneration, 83
- Combustion
Modelling of carbon and hydrogen oxidation kinetics of a coked ferrierite catalyst, 63
- Cracking
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
- Deactivation
Selective catalytic reduction of NO_x in real exhaust gas of gas engines using unburned gas: Catalyst deactivation and advances toward long-term stability, 17
Types of active sites and deactivation features of promoted Pt catalysts for isobutane dehydrogenation, 25
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
Isomerization of *n*-butane to isobutane over Pt-modified Beta and ZSM-5 zeolite catalysts: Catalyst deactivation and regeneration, 83
Methodology development for laboratory-scale exhaust gas catalyst studies on phosphorus poisoning, 113
Processes occurring during deactivation and regeneration of metal and metal oxide catalysts, 119
A comparison of catalyst deactivation of vanadia catalysts used for alkane dehydrogenation, 127
- Dehydrogenation kinetics
Types of active sites and deactivation features of promoted Pt catalysts for isobutane dehydrogenation, 25
- 2,6-Dimethyl-pyridine
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
- Dispersion
Residence time distribution of a purely viscous non-Newtonian fluid in helically coiled or spatially chaotic flows, 181
- Ebullating-bed
Comparison between deactivation pattern of catalysts in fixed-bed and ebullating-bed residue hydroprocessing units, 33
- Efficiency
Application of oxygen ion-conductive membranes for simultaneous electricity and hydrogen generation, 193
- Electricity
Application of oxygen ion-conductive membranes for simultaneous electricity and hydrogen generation, 193
- Energy
Application of oxygen ion-conductive membranes for simultaneous electricity and hydrogen generation, 193

- Enhancement
The mechanism model of gas–liquid mass transfer enhancement by fine catalyst particles, 149
- Exergy
Application of oxygen ion-conductive membranes for simultaneous electricity and hydrogen generation, 193
- Exhaust gas catalysis
Methodology development for laboratory-scale exhaust gas catalyst studies on phosphorus poisoning, 113
- Extraction
Water-based extraction of pectin from flavedo and albedo of orange peels, 203
- Filamentous carbon
Mathematic modeling of the process of production of nanofibrous carbon from methane in an isothermal reactor with a fixed bed of the Ni–Al₂O₃ catalyst, 139
- Fine and specialty chemicals
Suppression of catalyst deactivation by means of acoustic irradiation—Application on fine and specialty chemicals, 91
- Fixed catalyst bed
Mathematic modeling of the process of production of nanofibrous carbon from methane in an isothermal reactor with a fixed bed of the Ni–Al₂O₃ catalyst, 139
- Fixed-bed
Comparison between deactivation pattern of catalysts in fixed-bed and ebullating-bed residue hydroprocessing units, 33
- Flash calcinations
Textural and fractal properties of CuO/Al₂O₃ catalyst supports, 55
- Fractal dimension
Textural and fractal properties of CuO/Al₂O₃ catalyst supports, 55
- Fuel cell
Application of oxygen ion-conductive membranes for simultaneous electricity and hydrogen generation, 193
- Gas engine
Selective catalytic reduction of NO_x in real exhaust gas of gas engines using unburned gas: Catalyst deactivation and advances toward long-term stability, 17
- Gas–liquid mass transfer
The mechanism model of gas–liquid mass transfer enhancement by fine catalyst particles, 149
- General equation
General equation for linear mechanisms of catalyst deactivation, 73
- H₂-TPR
Study of catalytic behaviour and deactivation of vanadyl-aluminum binary phosphates in selective oxidation of *o*-xylene, 3
- Helical coil
Residence time distribution of a purely viscous non-Newtonian fluid in helically coiled or spatially chaotic flows, 181
- Heterogeneous catalyst
Suppression of catalyst deactivation by means of acoustic irradiation—Application on fine and specialty chemicals, 91
- H-MFI zeolite
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
- Hydrogen
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
Application of oxygen ion-conductive membranes for simultaneous electricity and hydrogen generation, 193
- Ideal gas plugging
Mathematic modeling of the process of production of nanofibrous carbon from methane in an isothermal reactor with a fixed bed of the Ni–Al₂O₃ catalyst, 139
- Industrial ageing
Durability of VOC catalysts in solvent emission oxidation, 11
- Isomerization
Isomerization of *n*-butane to isobutane over Pt-modified Beta and ZSM-5 zeolite catalysts: Catalyst deactivation and regeneration, 83
- Kinetics
Modelling of carbon and hydrogen oxidation kinetics of a coked ferrierite catalyst, 63
- Linear mechanisms
General equation for linear mechanisms of catalyst deactivation, 73
- Metal catalysts
Processes occurring during deactivation and regeneration of metal and metal oxide catalysts, 119
- Metal oxide catalysts
Processes occurring during deactivation and regeneration of metal and metal oxide catalysts, 119
- Methane
Selective catalytic reduction of NO_x in real exhaust gas of gas engines using unburned gas: Catalyst deactivation and advances toward long-term stability, 17
- Methane decomposition
Mathematic modeling of the process of production of nanofibrous carbon from methane in an isothermal reactor with a fixed bed of the Ni–Al₂O₃ catalyst, 139
- 3-Methyl-pyridine
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
- Methylcyclohexane
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
- Micro simulated moving bed
Micro-simulated moving bed (μSMB) systems: A numerical study, 169
- Microwave
Effects of microwave radiation on one-step oxidation of benzene to phenol with nitrous oxide over Fe-ZSM-5 catalyst, 99
Water-based extraction of pectin from flavedo and albedo of orange peels, 203
- Modelling
Modelling of carbon and hydrogen oxidation kinetics of a coked ferrierite catalyst, 63
Modelling of the substrate heterogeneities experienced by a limited microbial population in scale-down and in large-scale bioreactors, 157
- Nanofibrous carbon
Mathematic modeling of the process of production of nanofibrous carbon from methane in an isothermal reactor with a fixed bed of the Ni–Al₂O₃ catalyst, 139
- Nature of carbon species
A comparison of catalyst deactivation of vanadia catalysts used for alkane dehydrogenation, 127
- Ni–Al₂O₃ catalyst
Mathematic modeling of the process of production of nanofibrous carbon from methane in an isothermal reactor with a fixed bed of the Ni–Al₂O₃ catalyst, 139
- Nitrogen
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
- Nitrous oxide
Effects of microwave radiation on one-step oxidation of benzene to phenol with nitrous oxide over Fe-ZSM-5 catalyst, 99
- NO reduction
Spent Pd catalyst—Component for oxide catalysts, designed for CO oxidation and NO reduction, 107
- Noble metal catalysts
Durability of VOC catalysts in solvent emission oxidation, 11
- NO_x
Selective catalytic reduction of NO_x in real exhaust gas of gas engines using unburned gas: Catalyst deactivation and advances toward long-term stability, 17

- Oranges
Water-based extraction of pectin from flavedo and albedo of orange peels, 203
- Oxide catalyst
Spent Pd catalyst—Component for oxide catalysts, designed for CO oxidation and NO reduction, 107
- Pd catalyst
Spent Pd catalyst—Component for oxide catalysts, designed for CO oxidation and NO reduction, 107
- Pectin
Water-based extraction of pectin from flavedo and albedo of orange peels, 203
- Phenol
Effects of microwave radiation on one-step oxidation of benzene to phenol with nitrous oxide over Fe-ZSM-5 catalyst, 99
- Phosphorus
Methodology development for laboratory-scale exhaust gas catalyst studies on phosphorus poisoning, 113
- Pneumatic transport
Textural and fractal properties of CuO/Al₂O₃ catalyst supports, 55
- Poisoning
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
Methodology development for laboratory-scale exhaust gas catalyst studies on phosphorus poisoning, 113
- Products
Water-based extraction of pectin from flavedo and albedo of orange peels, 203
- Promoter action
Types of active sites and deactivation features of promoted Pt catalysts for isobutane dehydrogenation, 25
- Pseudoplastic fluid
Residence time distribution of a purely viscous non-Newtonian fluid in helically coiled or spatially chaotic flows, 181
- Pt
Isomerization of *n*-butane to isobutane over Pt-modified Beta and ZSM-5 zeolite catalysts: Catalyst deactivation and regeneration, 83
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
- Pt catalysts
Types of active sites and deactivation features of promoted Pt catalysts for isobutane dehydrogenation, 25
- Quinoline
Deactivating effect of coke and basic nitrogen compounds during the methylcyclohexane transformation over H-MFI zeolite, 43
- Reactor
Comparison between deactivation pattern of catalysts in fixed-bed and ebullating-bed residue hydroprocessing units, 33
Mathematic modeling of the process of production of nanofibrous carbon from methane in an isothermal reactor with a fixed bed of the Ni–Al₂O₃ catalyst, 139
- Residence time distribution
Residence time distribution of a purely viscous non-Newtonian fluid in helically coiled or spatially chaotic flows, 181
- Scale-down
Modelling of the substrate heterogeneities experienced by a limited microbial population in scale-down and in large-scale bioreactors, 157
- Selective desorption
Effects of microwave radiation on one-step oxidation of benzene to phenol with nitrous oxide over Fe-ZSM-5 catalyst, 99
- Selectivity
Types of active sites and deactivation features of promoted Pt catalysts for isobutane dehydrogenation, 25
- Simulation
Micro-simulated moving bed (μSMB) systems: A numerical study, 169
- Solid oxide fuel cell
Application of oxygen ion-conductive membranes for simultaneous electricity and hydrogen generation, 193
- Solvent emission abatement
Durability of VOC catalysts in solvent emission oxidation, 11
- Soxhlet
Water-based extraction of pectin from flavedo and albedo of orange peels, 203
- Stability
Selective catalytic reduction of NO_x in real exhaust gas of gas engines using unburned gas: Catalyst deactivation and advances toward long-term stability, 17
- Steam reforming
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
- Stochastic
Modelling of the substrate heterogeneities experienced by a limited microbial population in scale-down and in large-scale bioreactors, 157
- Sustainable
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
- Temperature programmed oxidation (TPO)
Modelling of carbon and hydrogen oxidation kinetics of a coked ferrierite catalyst, 63
- Three-dimensional model
The mechanism model of gas–liquid mass transfer enhancement by fine catalyst particles, 149
- Ultrasound
Suppression of catalyst deactivation by means of acoustic irradiation—Application on fine and specialty chemicals, 91
- UV–vis. Raman spectra
A comparison of catalyst deactivation of vanadia catalysts used for alkane dehydrogenation, 127
- Vanadia catalysts
A comparison of catalyst deactivation of vanadia catalysts used for alkane dehydrogenation, 127
- Vanadyl-aluminum binary phosphates
Study of catalytic behaviour and deactivation of vanadyl-aluminum binary phosphates in selective oxidation of *o*-xylene, 3
- Wastes
Water-based extraction of pectin from flavedo and albedo of orange peels, 203
- o*-Xylene selective oxidation
Study of catalytic behaviour and deactivation of vanadyl-aluminum binary phosphates in selective oxidation of *o*-xylene, 3
- Zeolites
Modelling of carbon and hydrogen oxidation kinetics of a coked ferrierite catalyst, 63
Effects of microwave radiation on one-step oxidation of benzene to phenol with nitrous oxide over Fe-ZSM-5 catalyst, 99
- ZrO₂
Catalyst deactivation during steam reforming of acetic acid over Pt/ZrO₂, 133
- ZSM-5
Isomerization of *n*-butane to isobutane over Pt-modified Beta and ZSM-5 zeolite catalysts: Catalyst deactivation and regeneration, 83
