General procedure for the addition reaction of arylboronic acid 1 with alkyne 2: A sealed tube containing $\text{Co}(\text{acac})_2$ (0.050 mmol, 5.0 mol%) and arylboronic acid 1 (2.00 mmol) was evacuated and purged with nitrogen gas three times. Freshly distilled solvents CH_3CN (1.6 mL) and THF (0.4 mL) and alkyne 2 (1.00 mmol) were added to the system. The dark-red reaction mixture was stirred at 80 °C for 12 h. The mixture was filtered through a short Celite column and a silica-gel pad and washed with dichloromethane. The filtrate was concentrated, and the residue was purified on a silica-gel column with hexanes/ethyl acetate as eluent to afford the desired addition product 3.
