Strategies for the Synthesis of *Stemona* Alkaloids

A union formed by chemical societies in Europe (ChemPubSoc Europe) has taken the significant step into the future by merging their traditional journals, to form two leading chemistry journals, the *European Journal of Inorganic Chemistry* and the *European Journal of Organic Chemistry*. Three further members of ChemPubSoc Europe (Austria, Czech Republic and Sweden) are Associates of the two journals.

COVER PICTURE

The cover picture shows two copper(I) click-based strategies for accessing multivalent neoglycoconjugates by the coupling of complementary functionalized scaffolds and sugar derivatives. The methodology allows the easy preparation of structurally diverse homogeneous neoglycoconjugates from which the influence of the structural parameters in the binding affinities toward *Concanavalin A* could be evaluated. Details are discussed in the article by F. Santoyo-Gonzalez et al. on page 2441 ff.
