

A Convenient Method for the Transformation of Alkenyl Sulfides to  
2-(Phenylthio)alkanenitriles, Homoallyl Sulfides, and Thioacetals

2-(Phenylthio)alkanenitriles, homoallyl sulfides, and thio-  
acetals were obtained in good yields by the reaction of alkenyl  
sulfides with the corresponding silyl nucleophiles via thionium ion  
intermediates.

In the previous paper,<sup>1)</sup> we showed that the direct cross-aldol type reaction  
proceeded by the successive treatments of alkenyl sulfides (1) with the reagent  
prepared from  $\text{TiCl}_4$  with an appropriate alcohol and trimethylsilyl enol ethers.  
This fact prompted us to investigate a new route to functionalized sulfides utili-  
zing alkenyl sulfides as starting materials (Eq. 1).

First, we examined the synthesis of 2-(phenylthio)alkanenitriles (3), which  
were conventionally prepared by the sulfenation of alkanenitriles,<sup>2)</sup> the treatment  
of thioacetals with  $\text{Hg}(\text{CN})_2$  and iodine,<sup>3)</sup> or the reaction of thioacetals with tri-  
methylsilyl cyanide in the presence of  $\text{SnCl}_4$ .<sup>4)</sup> The synthetic utility of 3 was  
recently demonstrated by Reetz and Starke.<sup>4)</sup> Further we reported a selective  
preparation of 2,2-dialkyl substituted alkanenitriles by the desulfurizative  
lithiation of 3 with tributylstannyl lithium followed by the treatment with alkyl  
halides.<sup>5)</sup>

Alkenyl sulfides were treated with a mixture of  $\text{TiCl}_4$  and an alcohol (MeOH or  
t-BuOH) to form the corresponding thionium ion intermediates (2). Then 2 were al-  
lowed to react with trimethylsilyl cyanide to give 2-(phenylthio)alkanenitriles  
(3) in good yields (Table 1).

The following experimental procedure is representative; to a  $\text{CH}_2\text{Cl}_2$  (1.1 ml)  
solution of  $\text{TiCl}_4$  (2.2 mmol) was added a  $\text{CH}_2\text{Cl}_2$  (1 ml) solution of methanol (1.1  
mmol) at r.t. under argon and the reaction mixture was stirred for 1 h at the same  
temperature. 3-Phenylthio-2-pentene (178 mg, 1 mmol) in  $\text{CH}_2\text{Cl}_2$  (2 ml) was added  
to the reaction mixture at  $-23^\circ\text{C}$  and the resulting deep red solution was stirred

for 1 h. Then trimethylsilyl cyanide (1.5 mmol) was added and stirred for 2 h. The reaction mixture was quenched by addition of aqueous  $\text{NaHCO}_3$  solution and the organic material was extracted with  $\text{CH}_2\text{Cl}_2$ . The extract was dried ( $\text{Na}_2\text{SO}_4$ ) and condensed under reduced pressure. The residue was chromatographed on silica gel (AcOEt-hexane) and 2-ethyl-2-(phenylthio)butanenitrile (195 mg) was isolated in 95% yield.

Table 1. Preparation of 2-(phenylthio)alkanenitriles (3)<sup>a)</sup>

$\text{R}^1$	$\text{R}^2$	$\text{R}^3$	R	Time <sup>b)</sup> h	Yield <sup>6)</sup> %
$\text{CH}_3(\text{CH}_2)_7$	H	H	$(\text{CH}_3)_3\text{C}$	1	56
H	$\text{CH}_3(\text{CH}_2)_2$	H	$\text{CH}_3$	2	0
$\text{CH}_3$	$\text{CH}_3$	H	$\text{CH}_3$	1	70
			$(\text{CH}_3)_3\text{C}$	2	63
$\text{CH}_3\text{CH}_2$	$\text{CH}_3$	H	$\text{CH}_3$	2	95
$\text{PhCH}_2$	$\text{CH}_3$	H	$\text{CH}_3$	2	95
			$(\text{CH}_3)_3\text{C}$	2	68
$\text{CH}_3(\text{CH}_2)_7$	$\text{Ph}(\text{CH}_2)_2$	H	$\text{CH}_3$	2	67
			$(\text{CH}_3)_3\text{C}$	2	70
	$-(\text{CH}_2)_4-$	H	$\text{CH}_3$	1	91
			$(\text{CH}_3)_3\text{C}$	1	40
$\text{CH}_3$	$\text{CH}_3$	$\text{CH}_3$	$\text{CH}_3$	2	58
			$(\text{CH}_3)_3\text{C}$	2	76
	$-(\text{CH}_2)_4-$	$\text{CH}_3$	$\text{CH}_3$	2	80

a) All the reactions were performed with a similar procedure as described in the text, unless otherwise noted. b) The time for the reaction of 2 with  $(\text{CH}_3)_3\text{SiCN}$ .

Next, the reactions of allyltrimethylsilane and phenyl trimethylsilyl sulfide with alkenyl sulfides were examined under the similar reaction conditions. It was found that the corresponding homoallyl sulfides (4) and thioacetals (5) were also obtained in good yields by these reactions, respectively (Table 2). Concerning the preparation of homoallyl sulfides (4), the similar transformation such as the reaction of thioacetals with allylstannanes via thionium ions generated by the treatment of thioacetals with dimethyl(methylthio)sulfonium tetrafluoroborate was reported by Trost and Sato.<sup>7)</sup> It is noted that the present transformation of alkenyl sulfide to homoallyl sulfide has an advantage that the reaction requires no specific reagent to generate the active intermediate. As to the preparation of thioacetals from alkenyl sulfides, the hydrogen chloride<sup>8)</sup> and perchloric acid<sup>9)</sup>

Table 2. Preparation of homoallyl sulfides (4) and thioacetals (5)<sup>a)</sup>

Me <sub>3</sub> SiNu	R <sup>1</sup>	R <sup>2</sup>	R <sup>3</sup>	Time <sup>b)</sup> h	Yield <sup>6)</sup> %
Me <sub>3</sub> SiCH <sub>2</sub> CH=CH <sub>2</sub>	CH <sub>3</sub> (CH <sub>2</sub> ) <sub>7</sub>	H	H	1	83
	CH <sub>3</sub> CH <sub>2</sub>	CH <sub>3</sub>	H	1	81
	CH <sub>3</sub> (CH <sub>2</sub> ) <sub>3</sub>	CH <sub>3</sub> (CH <sub>2</sub> ) <sub>2</sub>	H	1	81
		-(CH <sub>2</sub> ) <sub>4</sub> -	H	1	90
	CH <sub>3</sub>	CH <sub>3</sub>	CH <sub>3</sub>	1	82
		-(CH <sub>2</sub> ) <sub>4</sub> -	CH <sub>3</sub>	1	85
Me <sub>3</sub> SiSPh	CH <sub>3</sub>	CH <sub>3</sub>	H	2	73
		-(CH <sub>2</sub> ) <sub>4</sub> -	H	2	75

a) The preparation of 2 was carried out at -23 °C for 1 h using MeOH. b) The time for the reaction of 2 with Me<sub>3</sub>SiNu carried out at -78 °C.

promoted reactions of alkenyl sulfides with thiophenol were reported.

As shown in Table 1, 2-(phenylthio)alkanenitrile (3) possessing no alkyl substituent  $\alpha$  to phenylthio group (R<sup>1</sup> = H) was not obtained by the present reaction owing to the instability of the corresponding thionium ion intermediate (2). The same is true for the reactions of allyltrimethylsilane and phenyl trimethylsilyl sulfide. Then an alternative route to those sulfides was explored. It was found that such 2-(phenylthio)alkanenitriles (7) were obtained when 1-(phenylthio)-vinylsilanes (6), which were easily synthesized by the reaction of 1-(phenylthio)-vinyl lithium reagents with chlorotrimethylsilane,<sup>10)</sup> were employed as starting materials. On the other hand, trimethylsilyl group of the products was not hydrolyzed during the usual workup and the corresponding  $\alpha$ -trimethylsilyl homoallyl sulfides and thioacetals (8) were isolated in good yields by the reactions of allyltrimethylsilane and phenyl trimethylsilyl sulfide with 6 (Eq. 2, Table 3).

Table 3. Reaction of 1-(phenylthio)vinylsilanes (6) with the silyl nucleophiles

R	Me <sub>3</sub> SiNu	Time <sup>a)</sup> h	Temp <sup>b)</sup> °C	Time <sup>b)</sup> h	Product	Yield <sup>6)</sup> %
CH <sub>3</sub> CH <sub>2</sub>	Me <sub>3</sub> SiCN	1	-23	2.5	<u>7</u>	78
	Me <sub>3</sub> SiCH <sub>2</sub> CH=CH <sub>2</sub>	2	-78	1	<u>8</u>	65
CH <sub>3</sub> (CH <sub>2</sub> ) <sub>6</sub>	Me <sub>3</sub> SiCN	2	-23	2.5	<u>7</u>	78
	Me <sub>3</sub> SiCH <sub>2</sub> CH=CH <sub>2</sub>	2.5	-78	1	<u>8</u>	63
	Me <sub>3</sub> SiSPh	2	-78	2	<u>8</u>	70
(CH <sub>3</sub> ) <sub>2</sub> CH	Me <sub>3</sub> SiCN	2	-78	2	<u>7</u>	67
	Me <sub>3</sub> SiSPh	2	-78	2	<u>8</u>	80

a) The reaction time for the preparation of 2 carried out at -23 °C using MeOH. b) The conditions of the reaction of 2 with Me<sub>3</sub>SiNu.

Since alkenyl sulfides are easily prepared by the various reactions and starting materials,<sup>11)</sup> it should be noted that the present method provides a useful synthetic route to functionalized sulfides.
