# Subject index

## Volume 3 1996

The letters in parentheses refer to the following: X = Crosstalk, M = Minireview, R = Review, A = research paper and P = Perspective

- A-form RNA duplex, with adenosine bulges, 173 (A)
- A $\beta$  fibril formation, 949 (A)
- ABC (ATP binding cassette) proteins, 703 (M)
- Acetylaminofluorene, DNA base adduct, excision repair of, 121 (A)
- Acyl carrier protein, homology to P-pant transferases, 923 (A)
- Adaptation
  - in mechanotransduction, 223 (M)
- Adenosine bulges, in RNA, 173 (A)
- Adhesion probability, of erythrocyte and influenza virus, 757 (A)
- Aequorin, structure of, 337 (R)
- Affinity chromatography, of protein with engineered metal-binding site, 645 (A)
- Affinity cleavage to determine orientation of AP-1, 981 (A)
- Aflatoxin, biosynthesis of, 463 (A)
- Aldol condensation, with phosphoenolpyruvate, 83 (R)
- Affinity, enhanced by multivalency, 71 (X)
- D-Ala-D-Ala ligase
  - action of vancomycin, 21 (R)
  - inhibitors of, 37 (A)
- Alzheimer's disease
  - detection of amyloid fibrils, 351 (A)
  - involvement of ApoE, 949 (A)
- Amide linkage, of peptides and oligonucleotides, 49 (A)
- Aminoglycoside 3'-phosphotransferase, catalytic mechanism, 747 (A)
- Amyloid fibrils
  - detection with Congo red analogs, 351 (A)
  - inhibition of growth by ApoE, 949 (A)
- cAMP receptors, 241 (M)
- Analogs
  - phosphorus peptide analogs, inhibition of D-Ala-D-Ala ligases by, 37 (A)
- Angiogenesis and integrins, 881 (M)
- Antibiotics
  - delivery using mixed-ligand siderophore conjugates, 1011 (A)
  - kanamycin, phosphorylation of, 747 (A)
  - protegrin-1, structure of, 543 (A)
  - penicillin processing by  $\beta$ -lactamases, 937 (A)
  - ristocetin A, dimerization, 207 (A)
  - vancomycin, resistance to, 21 (R)
- Antibiotic resistance
  - aminoglycosides, 747 (A)
  - vancomycin, 21 (R)
- Antibodies
  - artificial, preparation of, 471 (A)
  - mechanism of hydrolysis by, 433 (R)
  - recognition of crystal faces by, 567 (A)
- Anti-cooperativity, of ligand binding and dimerization of ristocetin A, 207 (A)
- Antisense
  - use of oligonucleotide-peptide ligation in, 49 (A)
  - use of triple helices in, 57 (A)
  - use of phosphorothioate oligodeoxynucleotides, 319 (X)
- Antitumor agents
  - chromomycin, 193 (A)
  - cisplatin, 579 (A), 875 (M)
  - mercaptapurine, 875 (M)
  - mithramycin, 193 (A)
  - olivomycin, 193 (A)
  - taxol, 479 (A), 1021 (A)
  - 6-thioguanine, 875 (M)
- Antiviral, protegrin-1, 543 (A)
- AP-1, cooperative binding with NFAT to DNA, 981 (A)
- Apolipoprotein E, inhibition of A $\beta$  fibril growth by, 949 (A)
- Apoptosis, induced by Fas dimerization, 731 (A)
- ATP
  - as an extracellular signalling molecule, 229 (M)
  - binding by RNA aptamer, 611 (M)
  - hydrolysis by GroEL, 157 (M)
  - receptors, 229 (M)
  - transport, 703 (M)
- ATPase, structure in myosin and kinesin, 525 (M)
- Aureolic acid, biosynthesis of, 193 (A)
- Autoantibodies, recognition of RNA, 505 (X)
- $\beta$ -lactamases,
  - evolution of resistance, 937 (A)
  - structural differentiation from DD-peptidases, 937 (A)
- $\beta$ -turn structure, in protegrin-1, 543 (A)
- Behavior, in response to pheromones, 595 (X)
- Bending, of DNA, 671 (A), 785 (M)
- Bicoid, as a translational repressor, 415 (M)
- Bicyclo-DNA, Hoogsteen pairing, 197 (A)
- Binding energy, in X-ray crystals, 695 (X)
- Bioluminescence, 337 (R)
- Biosensor, lipid, 113 (A)
- Biosynthesis
  - of aureolic acid, 193 (A)

- of glycoproteins, 145 (X)
- in vitro*, 325 (X)
- of mithramycin, 193 (A)
- of taxol, 479 (A)
- role of phosphoenolpyruvate in, 83 (R)
- Bivalent peptide ligands, 537 (A)
- Benzopyridoindole derivatives, induction of
  - Hoogsteen-paired parallel DNA by, 57 (A)
- Bombesin, bivalent, 537 (A)
- Brevetoxin, self assembly into pores, 379 (A)
- bZip domain of AP-1, 981 (A)
  
- Calcium-binding photoproteins, 337 (R)
- Calcium sensors, photodegradation of, 765 (A)
- Calmodulin
  - calcium-binding domains, 337 (R)
  - recognition of structurally diverse peptides by, 519 (M)
- Cancer therapy targets, signal transduction inhibition, 887 (M)
- Carbohydrate
  - in vitro* biosynthesis, 325 (M)
  - docking with protein, 263 (A)
  - polyvalent display, 71 (X)
- Carbon cycle, and atmospheric CO<sub>2</sub> levels, 245 (R)
- Catalytic mechanism
  - in taxol biosynthesis, 479 (A)
  - of aequorin, 337 (R)
  - of aminoglycoside 3'-phosphotransferase, 747 (A)
  - of DAHP synthase, 83 (R)
  - of D-Ala-D-Ala ligases, 21 (R), 37 (A)
  - of DNA methyltransferases, 419 (M)
  - of DNA cleavage, 1039 (A)
  - of EPSP synthase, 83 (R)
  - of hydrolytic antibodies, 433 (R)
  - of KDO8P synthase, 83 (R)
  - of MurA, 83 (R)
  - of MurB, 83 (R)
  - role of short strong hydrogen bonds in, 163 (R)
- Caudal, translational repression of, 415 (M)
- Cell adhesion, inhibition with phosphorothioate oligodeoxynucleotides, 319 (X)
- Cell cycle arrest
  - by (+)-discodermolide, 287 (A)
  - by natural products, 623 (R)
- Cell cycle regulation, by CDK inhibitors, 869 (M)
- CFTR, and ATP transport, 703 (M)
- Chain length, of polyketide, 193 (A)
- Chaperonin, role in protein folding, 157 (M)
- Chemistry, as the universal language of biology, 3 (X)
- Chemical synthesis, of glycoproteins, 145 (X)
- Chemokine receptors, as co-receptors for HIV, 603 (M)
- Cholera toxin, detection by lipid biosensor, 113 (A)
- Cholesterol monohydrate, recognition of crystals by monoclonal antibodies, 567 (A)
  
- Circular dichroism, exciton coupled, to study brevetoxin self-assembly, 379 (A)
- Cisplatin, binding of hMSH2 to adducts, 579 (A)
- Combinatorial chemistry
  - in protein chemistry, 817 (A)
  - isotope or mass encoding in, 679 (A)
  - prebiotic, 515 (M)
  - SH3 ligands with non-peptide elements, 661 (A)
  - to develop biological reagents, 961 (X)
  - use of oligonucleotide-peptide ligation in, 49 (A)
- Computational screening, by docking, 449 (A)
- Confocal microscopy, for observing calcium sensors, 765 (A)
- Conformational changes
  - of nuclear hormone receptors, 529 (R)
  - of myosin and kinesin, 525 (M)
- Congo red, detection of amyloid fibrils, 351 (A)
- Cooperativity
  - between ligand binding and dimerization of ristocetin A, 207 (A)
  - between NFAT and AP-1, 981 (A)
  - of weak interactions at the binding interface, 695 (X)
- CO<sub>2</sub>
  - environmental fluxes of, 245 (R)
  - plant responses to changes in levels of, 245 (R)
- Copper, in generation of nitric oxide, 655 (A)
- Corrin, *in vitro* biosynthesis of, 325 (M)
- Corticosteroids, molecular imprinting of, 471 (A)
- v-Crk, in signaling via SH3 domain, 7 (M)
- Crystal faces, recognition by monoclonal antibodies, 567 (A)
- Cyclic ureas, inhibition of HIV protease by, 301 (A)
- Cyclin-dependent kinases, proteolytic degradation of inhibitors, 869 (M)
- Cyclophilin, domain for dimerization, 731 (A)
- Cyclosporin, dimer and induction of apoptosis, 731 (A)
- Cytochrome
  - c, protein folding of, 491 (A)
  - P450, in taxol biosynthesis, 479 (A)
- Cytolysis, by perforin, 31 (A)
- Cytomegalovirus, human, immune evasion strategies, 331 (M)
- Cytotoxic T lymphocytes, and viral immunity, 331 (M)
  
- DD-peptidases, structural differentiation from β-lactamases, 937 (A)
- Deoxyribose adducts, in DNA, excision repair of, 121 (A)
- Diffusion, of Sonic hedgehog, 13 (M)
- Dimerization
  - of ristocetin A, 207 (A)
  - of Fas/cyclophilin hybrid by cyclosporin A dimer, 731 (A)
- Dinuclear center
- (+)-Discodermolide, binding to microtubules of, 287 (A)

- Disulfides, protein religation in the absence of, 295 (A)  
DMP 450, inhibition of HIV protease by, 301 (A)  
DNA  
  backbone, bicyclo, 197 (A)  
  base adducts, excision repair of, 121 (A)  
  bending of, 671 (A)  
  deoxyribose adducts in, excision repair of, 121 (A)  
  1039 (A)  
  cisplatin adducts, 579 (A)  
  cleavage 1039 (A)  
  by phenanthroline cuprous chelates, 739 (A)  
  Hoogsteen-paired DNA, 57 (A), 197 (A)  
  interaction with NFAT and AP-1, 981 (A)  
  mismatch repair, 875 (M)  
  methyltransferases, base eversion and shuffling  
  by, 419 (M)  
  phosphate neutralization of, 671 (A)  
  polymerase  
  Klenow fragment, metal binding by, 393 (A)  
  T4, metal binding by, 393 (A)  
  recognition  
  by polyamide molecules, 369 (A)  
  self-cleaving, *in vitro* selection of, 1039 (A)  
  sequence-dependent structure of, 785 (M)  
Docking  
  of carbohydrate and protein, 263 (A)  
  of flexible ligands, 449 (A)  
  of small molecule and protein, 151 (M)  
Domain substitution or swapping, in polyketide  
synthases, 827 (A), 833 (A)  
Drug  
  delivery, iron-transport-mediated, 1011 (A)  
  design, engineering water binding sites, 973 (R)  
Dual function proteins, 415 (M)
- Electron microscopy, of viruses, 45 (A)  
Electron triggering, of protein folding, 425 (R), 491 (A)  
Electrospray ionization mass spectrometry, of  
viruses, 45 (A)  
Encoding, of combinatorial libraries, 679 (A)  
Energetics,  
  of biomolecular interactions, 791 (R)  
  of hydrogen bond formation, 163 (R)  
Energy landscape, in protein folding, 425 (R)  
Enol transfer, from phosphoenolpyruvate, 83 (R)  
Enzymes  
  D-Ala-D-Ala ligases, 21 (R), 37 (A)  
  DNA methyltransferases, 419 (M)  
  *sn*-glycerol-3-phosphate-acyltransferase, 277 (A)  
  hydrolytic antibodies, 433 (R)  
  superfamilies, and sequence analysis, 779 (X)  
  taxadiene hydroxylase, 479 (A)  
  TCHQ dehalogenase, sulfenic acid in, 851 (A)  
  Zinc hydrolases, similarity of Sonic hedgehog to,  
  13 (M)
- Enzymatic synthesis, of glycoproteins, 145 (X)  
Erythrocyte, inhibition of adhesion to influenza virus,  
757 (A)  
Erythromycin, domain swapping in biosynthesis, 827 (A),  
833 (A)  
Europium, for luminescence spectroscopy, 393 (A)  
Eversion, of bases by DNA methyltransferase, 419 (M)  
Evolution  
  of  $\beta$ -lactamase resistance, 937 (A)  
  of cells, 277 (A)  
  of metabolic pathways involving nucleoside  
  phosphates, 405 (P)  
Excision repair, substrates for, 121 (A)  
Exciton coupled circular dichroism, to study  
brevetoxin self assembly, 379 (A)  
Extracellular matrix,  
  interaction with integrins, 881 (M)  
  proteolytic remodeling of, 895 (R)  
*Ex vivo* biosynthesis, 325 (M)
- Fas receptor, dimerization to induce apoptosis,  
731 (A)  
Fatty acid synthase, in aflatoxin biosynthesis, 463 (A)  
FixL  
  assignment of hyperfine-shifted heme-proton  
  signals, 561 (A)  
  binding of ferric heme ligands to, 841 (A)  
Fluorescent signaling, by pyrene-labeled lipid  
membrane, 185 (A)  
Fluorescent microscopy, to determine localization  
of taxol, 1021 (A)  
Folding  
  fast, of proteins, 491 (A), 425 (R)  
  role of asparagine-linked glycosylation in, 803 (R)  
Fourier transform infrared spectroscopy, of  
Hoogsteen-paired DNA, 61 (A)  
Function of proteins, from sequence, 779 (X)  
Funding of science, 3 (X)
- G proteins, GTPase compared to ATPase of myosin  
and kinesin, 525 (M)  
G-protein-coupled receptors  
  ATP receptors, 229 (M)  
  desensitization of, 239 (M)  
  in *Dictyostelium discoideum*, 239 (M)  
Gal4, crosslinking to TBP via His<sub>6</sub> tag, 551 (A)  
Gangliosides, as receptors in lipid biosensor, 113 (A)  
Globotriaosyl ceramide, binding to verotoxin, 263 (A)  
*sn*-Glycerol-3-phosphate-acyltransferase, 277 (A)  
Glubodies, 359 (A)  
Glutathione S transferase  
  as a protein framework for generating libraries,  
  359 (A)  
  crosslinking via His<sub>6</sub> tag, 551 (A)  
Glycolipid, conformation when binding protein, 263 (A)

- Glycosylation  
functional role in glycoproteins, 145 (X), 803 (R)  
asparagine-linked, 803 (R)
- Glycoproteins  
biosynthesis, 145 (X)  
chemical synthesis, 145 (X)  
enzymatic synthesis, 145 (X)
- GroEL, interaction with GroES, 157 (M)
- GroES, X-ray crystal structure, 157 (M)
- Hair cells, in mechanotransduction, 223 (M)
- Hammerhead, ligand docking by, 449 (A)
- Hedgehog, signaling by, 13 (M)
- Heparin-binding proteins, interaction with  
phosphorothioate oligodeoxynucleotides, 319 (X)
- Heme, from FixL, 561 (A), 841 (A)
- Hemoprotein  
cytochrome c, 491 (A)  
FixL, 561 (A), 841 (A)
- Herpesvirus  
evasion of the immune system by, 331 (M)  
interaction of Tip with SH3 domains, 7 (M)
- Hemagglutination, by influenza virus, inhibition of,  
97 (A), 757 (A)
- Histidine tag, for protein crosslinking, 551 (A)
- Hoogsteen-paired DNA, 57 (A), 197 (A)
- Homochirality, generation on a mineral surface, 515 (M)
- Human cytomegalovirus (HCMV), evasion of the  
immune system by, 331 (M)
- Human immunodeficiency virus (HIV)  
co-receptors for, 603 (M)  
inhibitors of protease, 301 (A)  
interaction of Nef with SH3 domains, 7 (M)  
recognition of Rev response element, 129 (A)  
structure of bovine immunodeficiency virus  
Tat-TAR complex, 17 (M)
- Hydrogen bonding, of vancomycin to D-Ala-D-Ala,  
21 (R)
- Hydrogen bond, short strong, 163 (R)
- Hydroxylation, in taxol biosynthesis, 479 (A)
- Immune evasion, by herpesviruses, 331 (M)
- Immune response, recognition of structurally diverse  
peptides, 519 (M)
- Indo-1, photodegradation of, 765 (A)
- Intermediary metabolism, role of nucleoside  
phosphates, 405 (P)
- Influenza virus  
detection by lipid biosensor, 113 (A)  
hemagglutination, inhibition of, 97 (A)  
inhibition of adhesion to erythrocyte, 757 (A)  
neuraminidase, inhibitors, 97 (A)
- Inhibition  
of chymotrypsin-like activity of the  
proteasome, 905 (A)  
of D-Ala-D-Ala ligases, 37 (A)  
of hemagglutination in influenza virus  
97 (A), 757 (A)  
of HIV protease, 301 (A)  
of signal transduction to inhibit cell proliferation,  
887 (M)  
of telomerase activity, 863 (M)  
of trypsin-like activity, 905 (A)
- Integrins,  
interaction with extracellular matrix, 881 (M)  
regulating angiogenesis, 881 (M)
- Interactions, measured by isothermal titration  
calorimetry, 791 (X)
- Intercalation, of benzopyrindole derivatives into  
DNA, 57 (A)
- In vitro* selection  
of RNA aptamers, 611 (M)  
of ribozymes, 717 (R)
- In vitro* biosynthesis, 325 (M)  
of neomycin-resistant RRE, 129 (A)
- Ion channels  
ATP-gated, 229 (M)  
formed by brevetoxins, 379 (A)  
in mechanotransduction, 223 (M)  
in taste transduction, 233 (M)
- Iron transport-mediated drug delivery, 1011 (A)
- Islet amyloid polypeptide (IAPP), detection with  
Congo red analogs, 351 (A)
- Isothermal titration calorimetry, and thermodynamic  
studies, 791 (R)
- Isotope encoding, for combinatorial chemistry, 679 (A)
- Isozymes, deciphering function with the aid of  
combinatorial chemistry, 961 (X)
- Kanamycin kinase, 747 (A)
- Kinesin, structure compared to myosin, 525 (M)
- Kinetics  
of D-Ala-D-Ala ligases, 37 (A)  
of pore formation by perforin, 31 (A)
- Klenow fragment, metal binding by, 393 (A)
- Lactacystin, induction of bipolar morphology in  
neuroblastoma cells by, 905 (A)
- LacUV5 promoter, recognition by phenathroline  
cuprous chelates, 739 (A)
- Langmuir-Blodgett, lipid layers as biosensors, 113 (A)
- Lanthanides, for luminescence spectroscopy, 393 (A)
- Leucine zipper domain of AP-1, 981 (A)
- Lipocalin, and pheromone transport, 595 (X)
- Liposomes  
as biosensors, 113 (A)  
observation of reactions in, 105 (A)  
production of lipids in, 277 (A)

- Liquid chromatography/mass spectrometry, detection of sulfenic acids by, 851 (A)
- Loop–loop tertiary interactions in self-splicing introns, 993 (A)
- Lysozyme, religation of by subtilisin, 295 (A)
- Macula, function in vision, 255 (R)
- Mass encoding, for combinatorial chemistry, 679 (A)
- Mass spectrometry  
 for analysis of supramolecular complexes, 45 (A)  
 of biomolecules, 707 (R)  
 electrospray ionization, 707 (R)  
 of viruses, 45 (A)  
 in encoding for combinatorial chemistry, 679 (A)  
 MALDI, 707 (R)  
 non-covalent interactions detected by, 707 (R)  
 structure determination by, 707 (R)
- Matrix metalloproteinases, in the development of cancer, 895 (R)
- Mechanotransduction, 223 (M)
- Membrane, artificial  
 as biosensor, 113 (A)  
 metal chelating, 185 (A)
- Melanocyte-stimulating hormone, bivalent, 537 (A)
- Metabolism, role of phosphoenolpyruvate, 83 (R)
- Metal binding  
 by DNA polymerases, 393 (A)  
 by engineered proteins, 645 (A)
- Metal chelation by lipid membrane, 185 (A)
- Methyltransferases, base eversion and shuffling by, 419 (M)
- MHC class I, recognition of structurally diverse peptides by, 519 (M)
- Microinjection, of enzymes into liposomes, 105 (A), 277 (A)
- Microtubules  
 binding of (+)-discodermolide to, 287 (A)  
 binding of taxol derivatives to, 1021 (A)  
 depolymerization by natural products, 623 (R)
- Mineral surfaces, and oligomerization reactions, 515 (M)
- Minor groove, binding by polyamides, 369 (A)
- Mismatch repair protein, hMSH2, 579 (A)
- Mitotic spindle, effect of (+)-discodermolide on, 287 (A)
- Mithramycin, biosynthesis of, 193 (A)
- Molecular imprinting, of corticosteroids, 471 (A)
- Molecular modeling  
 of benzopyroindole derivatives intercalated in DNA, 57 (A)  
 of verotoxin binding to glycolipids, 263 (A)
- Molecular recognition  
 and X-ray crystallization, 695 (X)  
 by gangliosides incorporated in lipid layer, 113 (A)  
 by Cu(II)-iminodiacetate lipid, 185 (A)  
 by hydrolytic antibodies, 433 (R)  
 by polyamide minor-groove binders, 369 (A)  
 by mutagenized GST molecules, 359 (A)  
 by nuclear hormone receptors, 529 (R)  
 by RNA aptamers, 611 (M)  
 by SH2 domains, 79 (M)  
 docking of flexible ligands, 449 (A)  
 modeling of, 151 (M)  
 in nucleotide excision repair, 121 (A)  
 of amyloid fibrils by Congo red analogs, 351 (A)  
 of corticosteroids by molecularly imprinted polymers, 471 (A)  
 of crystal faces by monoclonal antibodies, 567 (A)  
 of glycolipid by verotoxin, 263 (A)  
 of metals by engineered proteins, 645 (A)  
 of open transcription complex, 739 (A)  
 of PxxP motifs by SH3 domains, 7 (M)  
 of RNA by autoantibodies, 505 (X)  
 of RRE by Rev, 129 (A)  
 of RRE by neomycin B, 129 (A)  
 of structurally diverse peptides, 519 (M)  
 of substrate by GST, 359 (A)  
 of SH3 domain by non-peptide elements, 661 (A)  
 of TAR by BIV Tat, 17 (M)  
 of tastants by ion channels, 233 (M)  
 DNA–protein interaction simulated by phosphate neutralization, 671 (A)
- Monoclonal antibodies, recognition of crystal faces by, 567 (A)
- hMSH2, binding to cisplatin adducts, 579 (A)
- Multifunctional enzymes,  
 peptidyl carrier protein domain, 913 (A)  
 modification of ACP domains, 923 (A)
- Multivalency  
 of non-natural carbohydrate derivative, 71 (X)
- Mutagenesis  
 by protein signature analysis, 817 (A)  
 of GST to alter substrate specificity, 359 (A)  
 of opiate receptors to identify ligand-binding domains, 967 (M)
- Myoglobin, comparison to FixL, 841 (A)
- Myosin, structure compared to kinesin, 525 (M)
- Natural products  
 aflatoxin, 463 (A)  
 brevitoxin B, 379 (A)  
 inhibition of the cell cycle by, 623 (R)  
*in vitro* biosynthesis, 325 (M)  
 chromomycin, 193 (A)  
 corticosteroids, 471 (A)  
 (+)-discodermolide, 287 (A)  
 kanamycin, 747 (A)  
 mithramycin, 193 (A)  
 olivomycine, 193 (A)  
 pheromones, behavioral response to, 595 (X)

 recognition by non-peptide elements, 661 (A)

- recognition of structurally diverse peptides by, 519 (M)
- Shiga-like toxin B subunit, binding to glycolipids, 263 (A)
- Sialic acid, incorporation in lipid biosensor, 113 (A)
- C-Sialoside, polyvalent display on polyacrylamide, 97 (A)
- Siderophore-mediated drug delivery, 1011 (A)
- Signal transduction
- by proteins with SH3 domains, 7 (M), 519 (M)
  - by nuclear hormone receptors, 529 (R)
  - by Sonic hedgehog, 13 (M)
  - generation of nitric oxide, 655 (A)
  - G-protein-independent, 239 (M)
  - in growth factor signaling, 887 (M)
  - in mechanotransduction, 223 (M)
  - in taste transduction, 233 (M)
  - in response to ATP, 229 (M)
  - in response to cAMP in *Dictyostelium*, 239 (M)
  - in response to CO<sub>2</sub>, 245 (R)
  - in response to pheromones, 595 (X)
  - in vision, 255 (R)
  - interference with, by inhibition of SH3 domains, 661 (A)
  - deciphering isozyme function in, 961 (X)
  - two component, by vancomycin resistance proteins, 21 (R)
- Sonic hedgehog, signaling by, 13 (M)
- Specificity
- of mutagenized GST molecules, 359 (A)
  - of polyvalent carbohydrate displays, 71 (X)
  - of SH2 domains, 79 (M)
  - measured by isothermal titration calorimetry, 791 (X)
- Stabilization, steric, of influenza virus, 97 (A)
- Steroid hormone receptors, 529 (R)
- Stoichiometry, measured by isothermal titration calorimetry, 791 (X)
- Streptavidin-biotin complex, X-ray crystal structure, 695 (X)
- Structural differentiation of  $\beta$ -lactamases, 937 (A)
- Structure-based design
- of inhibitors by docking, 151 (M)
  - of inhibitors of HIV protease, 301 (A)
- Structure-function analysis of cloned opiate receptors, 967 (M)
- Sulfenic acid, identification of, 851 (A)
- Subtilisin, religation of proteins by, 295 (A)
- Suppressor tRNA, use to generate proteins *in vitro*, 1033 (A)
- Synthesis
- of bivalent peptide ligands, 537 (A)
  - of Congo Red analogs, 351 (A)
  - of DMP 450 (HIV protease inhibitor) 301 (A)
  - of fluorescently labeled taxol derivatives, 1021 (A)
  - of inhibitors of D-Ala-D-Ala ligases, 37 (A)
  - of mixed ligand siderophore-drug conjugates, 1011 (A)
- of proteins containing unnatural amino acids, 1033 (A)
- Syp, crystal structure of dual SH2 domains, 79 (M)
- T4 DNA polymerase, metal binding by, 393 (A)
- TAR RNA, structure with Tat protein, 13 (M)
- Taste, molecular mechanism of, 233 (M)
- Tat protein, structure with TAR RNA, 13 (M)
- Taxol
- biosynthesis of, 479 (A)
  - comparison to (+)-discodermolide, 287 (A)
  - synthesis of fluorescently labeled derivatives of, 1021 (A)
- TCHQ dehalogenase, sulfenic acid in, 851 (A)
- Telomerase, as a target for chemotherapy, 863 (M)
- Template-directed ligation, of peptides and oligonucleotides, 49 (A)
- Terbium, for luminescence spectroscopy, 393 (A)
- Tertiary interactions in self-splicing introns, 993 (A)
- Thermodynamics, of biomolecular interactions, 791 (R)
- Thiolates, and generation of nitric oxide, 655 (A)
- Thiolation domain, of the peptidyl carrier protein, 913 (A)
- Tip protein, binding to SH3 domains, 7 (M)
- Touch receptors, 223 (M)
- Transcription
- activation by vancomycin resistance pathway, 21 (R)
  - crosslinking within the complex, 551 (A)
  - factors
    - Bicoid, 415 (M)
    - TFIIIA, 415 (M)
  - inhibition by phenanthroline cuprous chelates, 739 (A)
  - recognition of open transcription complex, 739 (A)
  - regulation by nuclear hormone receptors, 529 (R)
- Translation
- in vitro*, to develop unnatural amino acids, 1033 (A)
  - repression by Bicoid and IRP-1 of, 415 (M)
- Transporter associated with antigen processing (TAP), processing of viral antigens, 331 (M)
- Triple-helix, Hoogsteen base pairing in, 57 (A), 197 (A)
- tRNA, suppressor, for *in vitro* protein biosynthesis, 1033 (A)
- Trolox, inhibitor of photodegradation of indo-1, 765 (A)
- Trp* EDCBA promoter, recognition by phenanthroline cuprous chelates, 739 (A)
- Trp* repressor-operator complex, X-ray crystal structure 695 (X)
- Tumor growth
- and telomerase activity, 863 (M)
  - and angiogenesis, 881 (M)
  - and the extracellular matrix, 895 (R)
- Tyrosidine synthetase 1 (*TycA*), cloning and expression of thiolation domain, 913 (A)

Vancomycin, bacterial resistance to, 21 (R)  
Verotoxin, binding to glycolipids, 263 (A)  
Vesicles, giant, microinjection of enzymes into, 105 (A),  
227 (A), 757 (A)  
Virus  
    analysis by mass spectrometry, 45 (A)  
    fusion and entry of HIV using co-receptors, 606 (M)  
    herpes, immune evasion strategies, 331 (M)  
    influenza, inhibition of hemagglutination in, 97 (A)  
Vision, and polyenes, 255 (R)  
Vomer nasal organ, detection of pheromones by, 595 (X)

Water, at the interface of biomolecular complexes,  
973, (R)

Xanthophils, and the structure of the retina, 255 (R)

X-ray crystal structure

    A-form RNA duplex containing adenosine  
        bulges, 173 (A)  
    B-form DNA, 785 (M)  
    DMP 450, inhibitor of HIV protease, 301 (A)  
    DNA methyltransferases, 419 (M)  
    GroES, 157 (M)  
    hydrolytic antibodies, 433 (R)  
    kinesin, 525 (M)  
    myosin, 525 (M)  
    SH-PTP2 (Syp), 79 (M)  
    Streptavidin–biotin complex, 695 (X)  
    Syp (SH-PTP2), 79 (M)  
    Trp repressor–operator complex, 695 (X)  
    ZAP-70, 79 (M)

X-ray crystallization, and molecular recognition, 695 (X)

ZAP-70, crystal structure of dual SH2 domains, 79 (M)

Zinc, and activation of metalloproteinases, 895 (R)

Zinc hydrolases, similarity of Sonic hedgehog to, 13 (M)
