Amphotericin Biosynthesis in *Streptomyces nodosus*: Deductions from Analysis of Polyketide Synthase and Late Genes

Figure 3 in this article (Chem. Biol. 8, 713–723) contains errors. In the drawings of the acyl intermediates, the methyl stereochemistry and the alcohol stereochemistry introduced by extension module 2 are incorrect. The alcohol stereochemistry introduced by extension module 12 is also incorrectly drawn. In each case, the stereochemistry is opposite to what would be inferred from the absolute structure of amphotericin B. The corrected figure is printed below.
