Rupali Gangopadhyay and Amitabha De: Conducting Polymer Nanocomposites: A Brief Overview

Several of the schemes in this publication (*Chem. Mater.* 2000, 12, 608) contain erroneous structures, as listed below:

1. The structure of the IPN system of silanol-functionalized polypyrrole (Scheme 4) erroneously depicts Si–C bonds. These should have been drawn as Si–O–C bonds.
2. A double bond between the quinoid ring and the exocyclic carbon was mistakenly omitted in Scheme 5.
3. In the structure of sodium citrate (Scheme 5) the functional group shown below the plane (the dashed line) is –OH and that shown above the plane (the thick line) is COONa.
