In continuation of the study of flavonoids from plants of the genus *Scutellaria* L. (Lamiaceae) [1], we studied flavonoids from *S. phyllostachya* Juz. roots.

Ground air-dried roots of *S. phyllostachya* that were collected in Namangan District of the Republic of Uzbekistan were extracted nine times at room temperature with ethanol (80%). The condensed alcoholic extract was diluted with water and worked up successively with CHCl₃, EtOAc, and *n*-BuOH. The solvents were distilled off to afford CHCl₃ (20.0 g), EtOAc (15.0 g), and *n*-BuOH (23.0 g) extracts.

The EtOAc extract (18.0 g) was chromatographed over a column of silica gel with gradient elution by CHCl₃:*i*-PrOH (95:5→85:15).

Elution of the column by CHCl₃:*i*-PrOH (95:5) isolated chrysanthemum-7-O- β -D-methylglucuronide (0.15 g) and apigenin-7-O- β -D-glucuronide (0.13 g). Elution of the column by CHCl₃:*i*-PrOH (90:10) afforded baicalein-7-O- β -D-glucopyranoside (0.12 g). Finally, elution of the column by CHCl₃:*i*-PrOH (85:15) isolated oroxyloside (0.18 g).

The *n*-BuOH extract (23.0 g) was chromatographed over a column of silica gel with gradient elution by CHCl₃:*i*-PrOH (95:5→85:15). Elution of the column by CHCl₃:*i*-PrOH (90:10) isolated scutellarein-7-O- β -D-glucuronide (0.15 g). Elution of the column by CHCl₃:*i*-PrOH (90:10) produced apigenin-7-O- β -D-glucoside (0.10 g) and norwogonine-7-O- β -D-glucoside (0.18 g). Elution by CHCl₃:*i*-PrOH (85:15) afforded wogonoside (0.24 g) and luteolin-7-O- β -D-glucuronide (0.15 g).
