*Saururus chinensis* (Lour.) Baill (Saururaceae) has been used in Chinese folk medicine for treatment of various diseases, such as edema, jaundice, and gonorrhea, and as antipyretic, diuretic, and anti-inflammatory agents [1]. Previous biological studies of extracts of this species have shown their antiasthmatic, antioxidative, and antiinflammatory [1], cytotoxic [2], vasorelaxant and inotropic [3], hypolipidemic [4, 5], hypoglycemic [6, 7], analgesic [8], neuroprotective [9], and antihypertensive effects [1]. *S. chinensis* was reported to contain compounds such as lignans, alkaloids, diterpenes, flavonoids, phenylpropanoids, taninins, steroids, and lipids [1].

The herbs were identified as *S. chinensis* and have been described elsewhere [1]. Isolation was described in our previous report [1]. F2 (20 g) was applied to a silica gel column, eluted by petroleum ether–EtOAc, 10:1, 8:1, to get compounds **1** [10] (65 mg) and **2** [11] (62 mg). F4 (4 g) was purified by successive silica gel column chromatography, eluted by petroleum ether–EtOAc, 5:1, to get **3** [12, 13] (38 mg) and **4** [14] (22 mg).

The four lignans **1–4** were identified by comparison of spectral data with those reported previously in the literature. To the best of our knowledge, **2** and **3** were isolated for the first time from *S. chinensis*.

**meso-Dihydroguaiaretic Acid (1).** <sup>1</sup>H NMR (400 MHz, CD<sub>3</sub>OD, δ, ppm, J/Hz): 6.52 (2H, s, J = 2.0, H-2 and H-2'), 6.79 (2H, d, J = 8.0, H-5 and H-5'), 6.58 (2H, dd, J = 8.0, 2.0, H-6 and H-6'), 2.37 (4H, dd, J = 13.6, 6.8, H-7 and H-7'), 1.75 (2H, m, H-8 and H-8'), 0.82 (6H, d, J = 6.4, H-9 and H-9'), 3.80 (6H, s, Ar-OMe). <sup>13</sup>C NMR (CD<sub>3</sub>OD, 100 MHz, δ): 133.6 (C-1 and C-1'), 113.9 (C-2 and C-2'), 146.2 (C-3 and C-3'), 143.5 (C-4 and C-4'), 111.3 (C-5 and C-5'), 121.6 (C-6 and C-6'), 37.5 (C-7 and C-7'), 41.1 (C-8 and C-8'), 13.9 (C-9 and C-9'), 55.8 (OMe).
