

QUANTUM CHEMICAL DATA.
1,1-DISUBSTITUTED ETHYLENES

M.L.HERR

Received November 1st, 1971

SCF MO Tables including LCAO-MO's, energies, and bond orders are presented for the following 1,1-disubstituted ethylenes: 2-Vinylbutadiene, 2-phenylbutadiene, 1,1-diphenylethylene, 2-(2-naphthyl)butadiene, α -(2-naphthyl)styrene, 2-(2-anthryl)butadiene, 1,1-bis(2-naphthyl)ethylene, α -(2-anthryl)styrene, and 2-(2-naphthacen)butadiene.

The use of Hückel molecular orbital calculations and tables summarizing the results of these calculations have proved useful to organic chemists. However, these have largely been rendered obsolete by the advent of more sophisticated molecular orbital methods which are more capable of duplicating the results of laboratory measurements. Notably, the SCF MO method of Dewar and coworkers¹⁻⁴ has been shown to give excellent projections of ground state properties of conjugated organic

molecules. Thus it now appears possible and, in fact, desirable, to supplant the use of HMO results by the vastly more accurate tables derived from SCF MO procedures. A step in this direction has already been made by Dewar and Trinajstić^{5,6}. In a continuation of this effort, we present here a series of tables summarizing calculations on some 1,1-disubstituted ethylenes made by this same procedure¹⁻⁴. In the following tables, SCF molecular orbitals, orbital energies, molecular energy terms, and bond orders are presented. The following abbreviations, following the example of Dewar and Trinajstić^{5,6}, are used: c.r. = total core repulsion; σ -b.e. = σ bond energy; π -t.e. = total π -electronic energy; π -b.e. = π -bonding energy; t.e. = total

energy and h.a. = heat of atomization at 25°C. Charge densities are not explicitly presented since all compounds presented here are alternant hydrocarbons, and therefore, all charge densities equal unity. The procedures for using these tables to obtain ionization potentials, bond energies, resonance energies, *etc.* have previously been presented^{5,6}.

Thanks are due to Prof. M. J. S. Dewar for supplying a copy of his program, and also to Prof. J. Ghosez. Calculations were made on an IBM 360-40 computer on time donated by the Centre de Calcul, University of Lowain.
