## 16 THE EUROPEAN INVASION BEGINS

1994 is the year that the European Format opens and the UK is physically attached to Europe for the first time since it made a run for it back in old age before even Commodore Street had begun. And about time too, because there's loads of UK software on the shelves that we can't get to see, but we know there's all about to change...

### 30 BUT IS IT ART?

If you don't mind going to a gallery, there might be one or two more things to look out for this month.

More than games from Apple show you where you're going to get your software from.

## 34 THE MAKING OF 10TH DAN

It's worth doing in the context of the game that the authors promise will be the best, though to not all have our eyes on the CDL. This time around we get to see the first stage's obstacles to look up their class.

An early version of the game.

## SPECIAL FEATURES

### 18 EUROPEAN INVASION

There's a wealth of CDL software on the shelves just waiting to be discovered. We check it out.

### 30 BUT IS IT ART?

More than just improving your computer graphics from the last year, brought you Creative, Mountain and Cyberland warriors. This month's update.

### 34 GAME DIARY: THE MAKING OF 10TH DAN

Month three, we get the first glimpse of some graphics (but don't hold up your fingers).

## REVIEWS

### 11 SQUARESPACE

Custom, semi-persistent content? Or a great modern replacement? Or maybe just a bloated puzzle game?

### 12 WILBERFORCE

20 million years in the making CDL or take a few million. Who is this Wilberforce anyway?

### 12 ESCAPE FROM ARTH

What has Art done there for you? Doh. It shouldn't be under Commodore... and the inevitable crawling, and sub-plotting and so on... but apart from that...?

### 16 PD FORMAT

It's cheap, but is it a threat? Or even really a threat? Or downright sad, come to that?

## SERIOUS STUFF

### 27 TECHIE TIPS

You got... Jason Pinn... what a concept.

### 32 MEAN MACHINE CODE

This don't say, don't write on it, if you want to know about Machine Code, through, into mine.

## GAME REVIEWS... GAME REVIEWS

### 12 ESCAPE FROM ARTH

### 12 WILBERFORCE

### 11 SQUARESPACE

## ON THE POWERPACK...

### BONECRUNCHER

TURN THE PAGE FOR THE FULL COVERAGE BRIEFING...

If you found it lovingly stuck to the front of this

copy of Commodore Format, then Simon Forrester is here to tell you all about it. Well that may not be strictly true...

# POWERPACK

## BONECRUNCHER

46

### NO LOAD ZONE

If you're having a hard time loading the floppy, then Flash Free gives the cut edge in a floppy spin. Slip in a floppy, load it up and send it on your way to the CIA! Look for replacement copies... yours! Audio (about a sec. "hooop") Hardware: PA, Taylor's, Synthesizer

**Y**ou might have thought Flashy Taurus was a pretty good total, but wait until you see the income from his establishments!

Bonecruncher is set in a You take charge of (him) an old-fashioned thing that runs the hotel (as opposed to an old-fashioned thing that fronts a rock band). At the minute, you've got several chambers full of loot, all of whom would be a bit of a crap.

As the reward thing to a main to see, there's work to be done. Your job is to collect five old skeletons and chuck them in a pit. This can then lead the skeletons down into holes of traps to take up to the halfway there to see for whatever ends they see it.

Use the joystick to move Bone-cruncher, down, left and right, while hitting the fire button and moving the joystick at the same time will allow, or do something for something next to you (such as collect something, put something else in a big water's safe). You collect the skeletons by walking into them, and you throw them into the cauldron by simply loading the side of the pot.

### U GOT THE GLOCK.

Before you carry off, you might like to take a look at its many features (and it's not talking about the thingy behind the door). It's a monster! You see, there'll be some truly disgusting noises and several silly squawks, so you'd better work out some defense against them. Experience (and a copy of these instructions) will

**FULL GAME**

let you do one of three things. First, you could trap them using a glock. They'll turn into skeletons, but you can still learn to make more skeletons.

You had to ask, didn't you? You couldn't have waited. A glock is a strange hobby thing that goes in a, it'll happily become over and take a nap. You can tell which way the small is following with the read-meter on your control panel.

Glocks are the one type of strange thing in the place that won't do any damage, so you can push them out of the way. Glocks - these are less strange things that won't hurt you (you're main weapons being feet and surprise). The second and only thing only most intelligent strange thing is Flashy, a friend who sometimes doesn't getting started a bit. He's around getting started a bit. He's around getting started a bit.

He can hold them down, while you work your feet, but he's only got a limited lifespan and can't be killed like anyone else.

Your third defence against a monster is to take a bit of a nap, though you won't be able to return to a regular one if it's there.

If you thought the monster were really, though, you should see the spiders. These terrible things are clearly unkillable, so avoiding, but can kill mastery. They wander mainly around the edges of rooms, and feed off skeletons. Flashy is unkillable to their loss, though, so you don't need to worry about him (or anybody else, for something).

When the battles have been won, well, you'll be given a key and matching door that'll take you to the next chamber. So save time for later! main options ask for a bar of soap each, reach for the bones.

It's a bit of a monster game, but Flashy Taurus is your friend.

### QUICKSTART INFO

Up, down, left and right

— Simon Sneyd

Other left key to stop the foot goes by

Having them walking in instead of earth - a trap that's safely out of your way.

# PIPELAND

**Y**ou know, Mayhem is a minimalist, isn't it? We certainly did, so we gave it 100 per cent a few issues back those feisty days. Despite the many questions for what it's coming, even better comes along? We're still doing with this one — nothing all over fast. Mayhem is, for us, as we've composed saying that's just asking for trouble, today, isn't it?

And in case you aren't convinced about the game's greatness yet, this month's demo should do the trick. We've collaborated with the Nintendo to bring you this fully playable second level and that's the full end anything better excellent — actually if you wait long enough you might be able to collect the whole game just by buying Commodore Format!

Your mission, should you have a few minutes, is first to collect bags of happy that scattered across the old version of Pipland and take them to the big structure. Make you'll find lurking suspiciously somewhere (we're not saying where) has hiding his in each of the challenges.

This guy he knows all there is about the full version Pipland, making it a heavy place again. It's at this point that Mayhem goes on his second run, a mission to collect the gold stars.

That will ever be hanging about the place. Great. First he saves the place, then he rots it. There are several missions to top you at every step of your mission, which can be killed by either jumping on them or changing through them.

Controlling the Mayhem is really very easy. You move him left and right with the joystick, as well as making him jump (up) and crouch (down). If you're on the Faggy section, you can make Mayhem change by heading down his and pointing the little yellow speed-dial in the direction you want to look.

Here's a bit of trivia — if at any point you begin to see stars and you're not jumping at one!

On a screen at the time, press your mouse wheel considerably (about 1000) times. You're certainly 1000.

## QUICKSTART INFO

## QUADRAPED TEARAWAYS 2

If you're in the recent space of Mayhem Mega 64, you'll find them on these corners of tape, or thought it might be a nice idea to show you what some other CD-ROMs can do up to. This month's one (or rather better) the excellent (Quadraped) Tearaways 2 (which, a month later, is high quality indeed).

To catch the joy of the game (and all-screen, simply hit the numbers next to the name you want to see. That's it. Well, almost. Remember to see the volume up, though, or you'll get very frustrated, you have to take the time of working into accounts.

## ALL YOUR OWN WORK

It could be your time — your work, that is, on the computer. And just think of the glory and world-wide fame that comes with that! So if you've written any software you think the CD-ROM should include to see, send it along to Computer Submissions, Commodore Format, 18 Moorlands Street, Bath, Avon, BA1 1BB.

Your software will stand a better chance of actually getting onto the tape if you include a letter stating that your contribution is all your own work, and that you give permission for it to be used. Failing that, include your address and telephone number for us to contact you with, or the night even pay you.

Oh yeah, and before we go, thank you. Some would think we had the best-of-the-system for a long time, but we're not, especially if you're a huge, big, great, smiling, smiling in your faces here for no good reason. We know that the world should be QUADRAPED, but the same writers decided to quit! That's normally, and we're proud that just wouldn't suggest they just quit! Well,

## TECHIE TIPS

They're tips about techie things, but we're really not interested in them, are we? There's a few more other good stuff on the tape to bother with technical bits and pieces, but are, frankly, just the thing mentioned in Jason Firth's Techie Tips section (starting on page 27), reproduced on the tape for people who love to type them in themselves. Well, I feel, it's encouraging business and companionship and will lead to the downfall of more of our society.

Recent! Recent! Tips in the three listings manually, feel proud and keep Britain from descending into an eternal pit of despair and sorrow... Yeah — sort of from our coverage, Jason (right, this is war) — Jason!

## Tape to disk

If you're lucky enough to have a disk drive and want to use it to read or write it, then you can get hold of the mighty Power Pack on disk. Simply cut out the label on the tape (it's hard, with your name and full address of a parent or peer), pop it in to an empty tape in a cheap or postal order, made out to Adix Audio Video, for £7.99 (plus postage and packing) and send it to:

CD-ROM Tapes To Disk  
Adix Audio Video Ltd,  
Harrow: Kingsdale 14  
Tisbury  
Striggs, TT2 6BB

From somewhere beyond imagination, between Scylla and Charibides and down the back of the settee, comes the entity known only as The Mighty Brain. Now he's here and he won't rest until he's answered some letters...

## STAY TECHIE

Dear Ed:

In a recent issue of CF a few people have suggested that Tackle Tips should be expanded. I disagree strongly. *Computer Gaming International*, *CF Computing* and

*Let's Computer* all had programming sections, and many games suggested that they should be dropped at all and set on their own and new games were sold.

Where are these magazines now? They no longer exist. Yours

to those who persisted about programming sections. I find Tackle Tips very useful and have not had much since it began. I think Tackle Tips is the best bit of CF and should be left alone for interested programmers to enjoy. Obviously many people are mainly interested in games. It is obvious from the feedback that if it is not for the programmers there wouldn't be any games.

This should explain what would happen in the event of a Tackle Tips write to cease.

Long live TMS, Tackle Tips and the CF crew. Long live the C&G and the B&B. Long live the CF. Paul F. SMITH, Luton.

Well, I don't say much whether the magazine you're concerned about because they dropped their little legs. But we have absolutely no plans to drop Tackle Tips. It's very popular, and we'll be here until the end of 1984.

## WE ARE NOT ALONE

Dear Mr. Steve Stein:

The excellent editing and reporting for *Computer Gaming International* has the only authority of the industry. Of the other magazines, only *Let's Computer* has a similar reputation. However, the 200-page magazine cost almost the same as the 100-page magazine, and the latter is more up-to-date. The other magazines such as *PC's*, *Amiga*, *SoundByte*, etc., are publications, called *Magazine 2* by *Let's Computer*. *Mag 2* - 1983 is, of course, in German, but most of the games, news and updates are in English.

The presentation of both *Mag 2* and *Mag 1* is gorgeous. You told that

*Computer Gaming* is not in a position to invest into the report business of the magazine but that a lot of publishers of these

magazines might become interested. Well, obviously, I'm not sure, but we have a lot of interest in the last issue of *Magazine 2*. Of course, *Let's Computer Publishing* and *Let's Computer* have not been published for years.

My only hope is that you will send letters to me and to Steve Stein both about *Let's Computer* and *Let's Computer Publishing* so that they can be published. I can get them from *Game On* and *Mag 2* every month. The English word, *Let's* is not written.

"It is good to see that other programmers in other countries are doing work for the C&G, but it still doesn't help the fact that the C&G's leading programmer never has to England. It is a double, where you see there where you are. Obviously it's more in demand. There's only a handful of English programmers doing games commercially for England. The games you talk about (*Super Nobby* and *War of the Wanks*) are available. *Let's Computer Publishing* aren't available either, as most of the public or magazine is not out about them - they're not even known to the press."

If Future Publishing supports the magazine, then I think CF would pay attention to them, on some of the games. I'm sure games from the C&G can come, like *Game Design*, *Let's* (Reviews of

## CARNAGE TRASHED MY BRAIN

Hi Brian,

Here's a few meaningless questions I wish you've got them anyway.

- 1) How you sell me why, after 40 bloody years of throwing my C&G at my desktop wall, it decides to offer something falling out of my forehead instead?
- 2) How do you control last buyers?
- 3) But I'll get together! I got to murder even on the desktop *Carnage* after winning a full engine, loads of wires and miles, and you can guess what happened/yes. That's right, I got to choose eight and completed it. That's because

I'm a single level player with hundreds of other

and confusion.

- 4) How big is Britain?
- 5) How big is China's?
- 6) My pen being heavy on my plate.

7) Do you sleep?

8) Well, enough about me. Do you know of any decent publishers in the pipeline? Maybe in *MicroWorld* you see, 're could more games like that.

- 9) Do any of the CF crew like that dog? I do.
- 10) Guess what? My wife stopped the word *microcomputer/microcomputer* into a conversation.

those lines. In this I succeed?

I hate to have to go now, but the space for the printed text is getting longer.

Excuse me.

Yours

Ed

Ed

Our European overview on page 18 has lots of a few more platforms as well, so check that out.

16) Let's face it - it's a fact. Give issues it

16) *Microcomputer/microcomputer* is a common word to slip into a conversation especially if you're not sure what *microcomputer/microcomputer* actually means. But if you're trying *microcomputer/microcomputer* into a conversation it's a conversation, a certainly not real. *Micro* because it's just about to slip *microcomputer/microcomputer* into this conversation for a fourth time. That's why. **END**

Simon's no square. He's more on the rounded side. And getting him to review this puzzle was like trying to get a round peg into a square hole...

## THE STEM GUIDE TO PUZZLE GAMES

Just why do we seem to have been giving a ton of very low marks to puzzle games that never run dry? The problem with puzzle games is not that they're inherently easy because they aren't. Some are fun, but the low theoretical scores aren't. They were boring, if anyone other than their parents or wife could play puzzle games they risked hurt if you want to get a good score. Here are a few guidelines they'd have to follow:

- ▶ **Make it engaging** - showing some other game isn't going to save you (PVP)
- ▶ **Make it simple** - puzzle games have to be simple enough to let the player concentrate on the problem without being distracted by anything else.
- ▶ **Make it progressive** - taking the player to the next situation throughout the entire game is no fun. Changing levels repeatedly is a good way to give users something more than that - otherwise the time level structure you create will degrade a low power user around the clock. Every thing changing and being the player on their side.
- ▶ **Just a hint** - you could always make people seem to want to figure out Q&A for a puzzle game (though most of the time we can see why).

**P**uzzle games - we've seen a lot of them recently, haven't we? What's happened to action and adventure? There's a serious suspect to satisfy to satisfy for food, game and internet? Same as the Square Scape we set today to control the rotating world about as much as possible. (Though Richard Stone seems ready to start to show things at the PC, it has to be admitted.)

Apart from the square, the other main characteristic of the board is that it's easy. They say, later than a dog house commitment in a shared studio board. Once anything starts moving in the year, it can't stop or change direction and it has something.

The later color of a stepping-out and a square block, which can slide in four directions. The problem is that you only have a limited number of moves to get your block into the end is clearly just a few blocks and one shape (which moves the rest after that you will get the game). The last color in the player's changed-up way around the board, using them to solve puzzles (usually by just and forward-looking use of the screen to the user).

It's at this point that I have to say that Square Scape is disappointing - the graphics were so bad that once you've worked out a method for the first 10 levels, you won't have to think about the rest so if it's obvious the programmer has realized this and has obviously to control the situation, but none of the solutions quite work

The addition of water really helps the game out. Every 40 - 50 levels, it makes a difference.

Haven't I played this one? I could be level 2, 3, 4 or 4 down, but all the good is in it.

▶ **There's something about this problem - it's not really a puzzle, is it?** - showing that you don't think you're the player, which does prompt the user why they're bothered including them in the first place, really.

- ▶ **Blockers** - these can be built into blocks, and set exactly like walls.
- ▶ **Power-ups** - these can be like 100 easy blocks, and set exactly like walls.
- ▶ **Invincible blocks** - these are probably better. The idea is that no one needs ending a game because they feel they can't win.

There's the bumping into an invincible obstacle that they couldn't possibly have planned for.

As you can see, there are a really weak examples of imagination, is there? This is where the more really like problems, then you have to remember that this game was 100% - and mostly a game involving figure it out the end of levels. Considering you're looking at why it's not the same idea for a copy of DP and a PC version, though there are more the game idea itself is a higher level? Can't be considered something good of the best that it's trying? Would you think that for it?

No. Though generally simple and generally well presented, not enough attention has been given to the gameplay to make this anything other than a good PC release or a mediocre compromise budget title. It's not a patch on the better, but still better 100% Age (powered in 1978) which changed, and really never got a release in the UK.

# ESCAPE FROM ARTH

Thimon Forrethter taketh a look at thome new thoftware from Vithualithe. Thith oneth a platform thoot-'em-up.

**E**xit played. Exit! It is, isn't it? I assume the idea of a platform in a space that wandering around is hardly novel, attempting to stay forever from a painful death by getting off the board. That's the rule of Arth's play area with this, but that isn't exactly much when the characters and enemy things are loaded with the Exit software, but there are no jet packs here.

The rest of the game goes straight into the realm of Don Doherty, a good one up to which you move left or right across a five-screen screen, occasionally being allowed to move onto a different wall. Unlike the utterly unorganized Don Doherty, though, Escape From Arth follows a more action-oriented theme, and so the direction the character moves is not the only similarity to the two titles.

So it's not as good as Exit, but better than Don Doherty. Well, there's a huge theme between these two games, so that's saying much about the quality of both, really. So let's go in for a bit of a closer examination.

The first thing you'll realize is that you don't get a level — you have the option to carrying a better style, but you can't. You can't get any kind of a greater of ease. Since you're not allowed to use it, the incredibly simple control system that takes three seconds about you, you'll get an entire game to explore...

...with an odd file game. It begins with you

The walls are clearly marked, should you decide to use them.

standing alone on a barren planet, controlling you with a light whirring of these and that, something really, like you walk to the right line, reaction that makes it go down, whatever (perhaps you control things on the ground, but you can't stand around the screen). I guess that's the trigger when you're in line with your gun, and you'll find some jet packs to any direction you'd attack the monster that's coming.

This is where we hit a slight change. Over that when wandering around, there's that wall of a better world, roughly the size of the old is power. It seems a single theme to use a style, or you can't really off to be off the ground. You can't have anything to do with this thing while...

Simon tried his hand a magic once, with tragic consequences. Dave had been asking for it, though.

**H**ave you ever been trapped in Paradise with Wilbur Moses as the owner's apprentice... I mean, always scared of looking in a hole, got trapped in the 'tilt. Wilberforce is a five-level platform game starring a character called Wil, another character's name and who's also been talking in the circles as well as a team. Even more, especially he has also decided that a team would be a great subject to experiment on. The last of them already has some problem with this.

But... what your stage doesn't catch that's Ministry.

## WILBERFORCE

Though, as he took the lesson that was multiple if I caught... the nightmare are coming back.

Two lessons. Four books. Eight. 10. 30. 64.

Level, we get the book...

Level and means.

That's a lot of

book, and maybe

off to see the

momentarily steps

could be more

scarily do books

just up anything?

If you don't want

to find, you'd better

follow the books to the

books to follow the words.

The game will have to

runway through complex,

complexing means, comes with

books that lead to other

cards, each card being a self-

same contained with patterns.

On each of the five main

levels will have to collect four

books, scattered around the

various sub-levels. In order to

progress to the next section,

you'll also find a new, other

thing scattered around, such as a magic wand on level one when you're used to your advantage in the first level.

Given the shooting is not too bad, but you're not

But maybe it's complicated by these elements,

books which are usually in level. Luckily, for a

prolonging mission, Wil has already got quite a few tricks

up his long purple

eyes, like that

kind of defense

and attack are

magic crystals,

returning things

and making sure of

### THE STEM INTERVIEW

It was a quick journey through the

books, but a long time to be in the club

books to find an object to be used on the

ground game in Wilberforce. Let's have a big

book for the one, the only book.

"What was that you're saying? Maybe? I see the what

is... Wilberforce, you're talking about, but I see the what

is... Wilberforce, you're talking about, but I see the what

is... Wilberforce, you're talking about, but I see the what

is... Wilberforce, you're talking about, but I see the what

is... Wilberforce, you're talking about, but I see the what

is... Wilberforce, you're talking about, but I see the what

is... Wilberforce, you're talking about, but I see the what

shooting effects, as your Blasts Can't Jump. That's right—you have to make do with aiming upwards and trying to pick off the downed things as they about-face. This is a left-down, I have to go—these bombing like a bomb with a really long trip, but nothing worse in fact than just falling off the ground. **Bummer.**

Once you've got the hang of the best way to fly, you're able to affect earth-tremors, you'll learn to explode, and discover the ordinary. Occasionally you'll find a star where it's not a star where it's not a star for you to go through and explore further. As you're clearly free to wander wherever you want, you'll notice just how well the exploration is done. The combined feature of shooting might get a bit tedious, though.

Yes, *Art of Flight* has a vibrant side. In effect all you're doing

Escape from Arth is a game of the week. Life on the edge.

is being a laser cannon about the place like a

video attempt to avoid the bad guys, but the mission of a few shooting messages saying things like "How well? Good work" and "Bummer" can make anyone go on a psychotic rampage.

As you expect from a group of hardened veterans, *Art of Flight* is a visual production—see page 24.

The Art of Flight is a very well-presented game. It sounds wonderful and sports some really, well-thought-out, really, really good-looking graphics. It's a bit of a pity that the game is not as good as it could be. It's a bit of a pity that the game is not as good as it could be. It's a bit of a pity that the game is not as good as it could be.

## THE STEM INTERVIEW: ROBBIE CRUSOE

It really isn't a challenge for me to find an expert to comment on this game. There's the fact I've played through about 1000 hours in this and spent a lot of time with it. I've also been on the other side of the screen, and I've been on the other side of the screen, and I've been on the other side of the screen.

This is definitely a good game, but it's a bit of a pity that the game is not as good as it could be. It's a bit of a pity that the game is not as good as it could be. It's a bit of a pity that the game is not as good as it could be.

You long about with the other, I fear.

### Other things

The look is more the shooting and action aspects of the game are well focused, especially in the first three levels, each of which contains two different game styles: open worlds and individual platform sections.

Levels four and five are a little bit of a departure from the norm, as level four has no enemies to destroy, only levels to be collected. Level five is really different as it features AI running items across the hills with the spots, chased by a horde of enemies, who've found a way to all those mountains. On the one hand it might be said of a sequel to change the playing style for the first level, but it seems quite well in *Wilberforce*, as the game still needs to follow some sort of plot.

More things to come in the next issue, including a special interview.

Which do you find better, flying or walking? The answer is simple: flying is better.

## WILBERFORCE

It's not all good news, though—there are a few things that an *Wilberforce* fan should know. The first is the control system which, though it's a straightforward jump, duck, left and right affair, has a few flaws, making your flying a little difficult to control at points that you would really do with some precision. **Wish well.**

The music comes of the game is somewhat lacking, however you spend most of your time fighting off the bosses with an increasingly heavy hit.

The game also suffers from a lack of variety. The graphics are decent enough, though nothing to write home about, but the action is well done, controls and general presentation is a bit rough, almost as if it hasn't been finished yet. It's unfortunate, because the early *Wilberforce* has

become an art form, so does learning you rely around the map, and it's a bit of a pity that the game is not as good as it could be. It's a bit of a pity that the game is not as good as it could be.

## ESCAPE FROM ARTH

Price: £20

Available from: Visual Concepts Software, 10 The Grove Road, Kings Lynn, Norfolk, PE33 9SP

- ▲ There's a lot to explore
- ▲ Not lots of things to do
- ▲ Not mapping can get a little awkward
- ▲ And it's a shame you can't jump off the ground
- ▲ You'd do well with a bit more variety

**POWER RATING**  
**70%**

an excellent example. It's all a shame enough, and there are always going to be people who love the game, but it's not the sort of game you show to your mates to impress them with what the CD is capable of.

If you're really worried, try around a series of new, developing and exciting and fighting a few control systems you can, but it's just a bit of a pity.

## WILBERFORCE

Price: £20.00 on tape or disk

Available from: Visual Concepts Software, 10 Grove Road, Kings Lynn, Norfolk, PE33 9SP

- ▲ It's got potential for real depth
- ▲ That really could have been used better
- ▲ The controls have a bit to be desired
- ▲ There are some good ideas in there, though
- ▲ Why they've got lost, really

**POWER RATING**  
**55%**

# ACT REPLAY

THE MOST POWERFUL, FRIENDLY AND FEATURE PACKED UTILITY CARTRIDGE EVER CONCEIVED!

NOW ONLY **£24.99** WHILE STOCKS LAST

#### TURBO LOADER

- Load 200 block programs in under 6 seconds - world's fastest disk serial loader. On-going RAM and ROM addresses high loading speeds. Works with 1541/1521 Commodore 158

#### INFINITE LIVES GENERATOR

- Automatic infinite lives? Very easy to use, works with many programs. No user knowledge required.

#### PROF MACHINE CODE MONITOR

- Full 64K Processor Monitor - examines ALL memory, including stack, VIC area and registers in their frozen state. Ideal for debugging or just for fun!

#### SPRITE CONTROL

- Freeze the action and view the sprites - watch the animation - customise your games till sprites collides.

#### FREEZE/FACILITY

- Now you can make your old slow loading programs load faster. Simply freeze the action and save to tape or disk to reload at superfast speed - no more waiting for programs to load.

#### DIAG. OSDP

- Easy to use diagnostic screen than conventional ones. Ideal for handling disk errors.

#### TAP BUBBLE

- This feature will add Turbo Freeze to the programs that you want to save - no user knowledge required.

#### FAST FORMAT

- Format an entire disk in about 70 seconds - no more messing about.

#### PRINTER DIAGN

- Print out your frozen screen to printer - MPG 501, 503, Epson, Star etc.

#### VIDEO EDITOR

- For games printers Star, Epson, etc. Print out listings with graphic characters etc. (RAM required for parallel port £18.95)

#### SCREEN EDITOR

- Now you can edit the entire frozen screen with this fast 600 x 400 - change names on high screens, etc. Great fun!

#### GRAPHICS SUPPORT UTILITIES DISK

**SCREEN SHOW** - View your favourite screens in a slide show type display

**SHOW UP** - Rescue utility allows you to take any part of a picture & 'take it up' to full screen size

**EDITOR** - A complete sprite editor helps you to create or edit sprites.

**MESSAGE MAKER** - Any screen captured with Action Replay or created with a graphics package can be turned into a scrolling screen message with music.

ORDER NOW

#### THE REVIEWERS SAID...

"The planned, analyzed and totally impressed. This is easily the best value for money cartridge. THE CARTRIDGE KING" **COMMODORE DISK USER**

It's the end of an era, as Simon bows out as CF's PD reviewer with an explosive selection of low-cost, non-copyrighted software (yes that sentence did contain a very bad pun...)

# PD FORMAT

## INTRIQUE

by Tabbe

To peek off the month with the type of items release that saw the DOS explosion, other searching when I come to PD. One of my favorites, a demo means a set of freely programming techniques that you've seen before in every other demo, even if I came from the CPO scene. As follows: main screen. All programs are in screen an instant to let people see their ability to program. One can see why on your original made the appearance of sound tracks and beautiful screen graphics to attract your attention. One can also integrate a combination of what called Topics. I think I like the resource that were...  
 Intrigue is a strange item. It brings with it graphics, music, images and gives them from them. During the course of the discovery (with a few nice programming able) I was able to use the device.

direct modes of what can only be a truly elegant mind, appearing in the most precise, exciting, imaginary manner. The stuff is class.

As for the show numbers on, they're heads with

children with learning machine, people suffering female hearts and music-bound main-screen through-life. (Technically, each company, we're treating the privilege of someone who can only do a representation of Jim Morrison—"Come on, do where they get. After all, you don't have a heart. Come follow") I'm done old that might, but I really think it's a great idea. I'll be back.

The quality sound images are beginning enough, but the format is completely over-the-top. It's not that much to be sure, but I think you'd want to get some more. I'm sure you'd want to get some more.

In summary, this is a fantastic, not to be missed. I don't say it's exactly that, but I really want to

get something a bit, but rather on your ability to be updated in timely format. It's accurate, clear and excellent presented, but I'm not sure I'd get too much out of it. 85%

## AVAILABILITY

The show numbers on the page are...  
 I'm sure you'd want to get some more. I'm sure you'd want to get some more.

## DIR-MASTER

There's something that should mean...  
 I'm sure you'd want to get some more. I'm sure you'd want to get some more.

simple to use, allowing you to be...  
 I'm sure you'd want to get some more. I'm sure you'd want to get some more.

## OCTANOTER, ZAPHOD

### NOTER & FACENOTER

All for one and one for all! This really is a Times 10...  
 I'm sure you'd want to get some more. I'm sure you'd want to get some more.

There are simple bits

Programs that display messages...

It's not really very useful, as if Octanoter is a very simple but beautifully presented editor which lets you send a message and...

The same classic block of 16.

## CH-CH-CH-CHANGES

There's going to be a new one...  
 I'm sure you'd want to get some more. I'm sure you'd want to get some more.

All's quiet on the UK front as far as the C64 is concerned, it seems, but there's still a lot of action going on in Europe. And now it looks like us lot here in Blighty could be on the verge of getting in on the action.

# THEY'RE COMING

**D**o you think you know everything there is to know about the C64 scene? If you're reading your head of the module it's not a bad start, but you'll still have another question - do you know anything about what's happening overseas? It probably isn't realistic that other countries have C64s as well as Britain, they actually first went on sale in the USA, please, you ought to have realised - it looks like Europe is coming back into the world of the C64 in a big way.

## THE ENGLISH CHANNEL

As soon as you step over or under the English Channel into Europe, you find yourself playing on a general level. For some reason these doesn't mean you, a few magazines left of the channel (other than taking to them, you've not) keep telling you absolutely everything about everything else, probably because they want to be the same level as you're used to. That placed them

some has decided to work on something a little more productive, though. Software developers on the continent who have not seen a C64 seem to be coming over here to (for who looks at the shores of Italy), checking out how the C64 scene are doing in those markets, and wondering what our standards are doing to try and join the same old world of software.

My...  
other wife.

## BRITAIN

The situation in Britain is very simple - currently little is happening here but

there are loads of great games on the shelves, and we want to get our hands on them. There are a few people and companies to watch in the coming months as far as imports are concerned.

John White, C77's own writer and independent game developer: "We need to import a greater range of games who is concerned in importing, but it's not really after those some great deals, when they'd be getting a high percentage of the profit. The thing I'm interested in is getting the titles into the UK market - I'm not interested in massive profits, as I'm doing my own thing, that I'm making money on. As long as I can cover my costs, I'll be happy to distribute stuff."

John White is looking into importing European games, the most of them are the same games imported here from the US (going \$1 per copy). Steve Matthews of Electronic Arts:

"I'm interested to get the titles. The main problem will be getting access well to them at the games that get released over there are getting released over here by the UK retailers, who don't have it a commercial. I'm going to be wanting the UK retailers a lot of all the games that have been released so they can take them out."

They'll also be wanting Captain America and Flashback, a great deal of work for which is been coming in Germany and Sweden like there is spread across the globe.

## DENMARK

The advantage of Northern Europe isn't as quiet as some people may think. As well as being a place of nice and beautiful geography, it's the home of Nordic entertainment, notably one major software house.

"We've been working on a game to fit the Scandanavian theme. We've been making about shipping a mail order system. It was a little bit of a surprise, but it's still going to sell up from Denmark. It's not too bad - used international mail you'll know what to make - it's not too bad. It's been looking into selling it through some British groups like APC and Transvision, though, because it's a lot easier."

His team has got a pretty impressive lineup, as well. On the main coding side, they've got

Nilsen Mathiasen, the main person behind the Nordic culture which scored \$1 per copy in C64. Jasper Jensen is one of the graphic artists, preferring to draw rather than code.

While we're on the subject of water shipping, the team have also got probably the most advanced C64 musician over - Grand Tet (Duffin Europe and Rocktop) and the biggest title is working on the soundtrack. There's right - this is going to be a European-style game with some of the best music and graphics ever.

Grand Tet is also working on a music system that will release later this year, which is shipping out as possibly the best on the C64. When he did Duffin

Europe, he had the chance of music along with samples that would require will enable you to enhance that in your programs.

**GERMANY**

Available  
in  
English,  
French,  
German,  
Italian,  
Spanish,  
and  
Japanese.

**GERMANY**

As you'd probably expect, Germany is more than a little active on the scene, landing probably the most respected slots in Europe.

Severin Wilson (Singapore PDB) "Germany has got a very big scene, but everything that's released goes through CP Verlag in German software and publishing circles — Simons, and is supported by them. Anyone who wants to import any German CD-ROM games has to go into discussions with them, instead of talking to the programmers."

Silvan Gubis (DB) "Probably the biggest thing on the horizon is Germany 1939, now, with the other Singapore, Rome 1940 and Operation 1944 being released by CP Verlag. These titles are released in real order, and are available to anyone who wants them. The German way CD-ROM involves a monthly club for all games (except the CP, that) — Simons, but that's available through magazines instead of mail-order."

The club requires Simons members here and

staffed with software, a lot of it new, and usually come with a paper-based magazine as well. If you've never seen one, take a look sometime.

Jasper Lainez came some very obvious flaws with the German way of doing things on the CD-ROM. "A very big mistake that Germany is making is only selling games in Germany." And don't see how long it is to get into the US, would you?

It is to get into the US, would you? And I know lots of some titles that the British (and/or) are doing that are released in exactly this situation, so naturally we'll see some developments so that from now on, naturally, here at CD we're in negotiation with CP Verlag of this very nature... well I suppose that depends on what you're reading this at. It's 5:30 in the morning, we probably aren't.

Oh yeah — one person we talked to who wanted to make anonymous (just his, not, had one other observation about the German scene. "We don't get many check-coupons from Germany — they won't touch anything but credits, gems, or any amount of it. Funny that."

**POLAND**

From this is one that nobody expects. In a magazine, we occasionally receive letters from computer clubs in Romania, but that's about as far west as UK and American computers usually get. But there are discovered the Polish scene.

One of the biggest problems for Poland has been the copyright laws, so they quite simply

don't have any — anyone can grab anything without breaking the law at all. Never has resulted in a lot of more specific games by the club's offer, produced by a Polish group called Agony. It's apparently a lot like Pac-Man, and the company is looking for a foreign distributor (outside Poland, so we should see that one quite soon, Simons).

Gubis sees the problems with Polish export as similar to every country's import. Classic Polish exporting action.

situation. "L.R. Archer in Poland is producing a lot of software that seems to be getting around, but it's only being sold for the local market. This doesn't really bother them, as they're not really interested in spreading their work any further — they don't seem to need to spread the love of money getting games translated into English, if it's just a simple shoot-'em-up though, that language difference doesn't really matter."

One point that should stop the jaw of the most ill-humored, and almost CD-ROM user is that the machine has only been introduced to Poland very recently (owing to import restrictions). Before this, they had to settle with emulating Soviet Sparcans through

worktoms (before do you like one of them, that?). If you have to do Format this month, you'll be able to see what a nice graphics mode, something. This was actually produced by a Polish team (perhaps by Pac-Man), so you can probably get some idea of exactly what they can produce.

Here in the office, we've just received a copy of Pac-Man's a new Polish puzzle game from Simons Software. Through this isn't exactly the hottest, most interesting game in the CD-ROM world at the moment, it certainly shows us that Poland is beginning to find its feet in the CD-ROM market in a big way. I think we can expect to see a few reviews quite soon.

**CONTACTS... CONTACTS... CONTACTS...**

## STORMLORD

There be a mighty storm a-brewin' but fear ye not, for Andy of the Roberts' clan predicts clear skies yonder if ye follow his sage-like advice, ooh-aaar...

(accent © Naff Regional BBC Sitcoms Inc)

**PART TWO**

### LEVEL 3

### LEVEL 4

### LEVEL 3

**FROM THE START:** Make your way to the left, jumping over the springboard and onto your goal, then prepare to deal with the bombardment of those pesky lightning bolts. To best these bouncers around quite violently, but you'll be safe once you reach the second wall. Move carefully under the beam so it goes out of the way, then grab the KEY. Now carefully make your way back to the right again, then use the springboard to teleport. Assuming the need creeps big time, go right, jump the door, then rescue the FAIRY and drop down. Head right, grab another chance of a key, and collect the BOOTS (which allow you to jump higher).

Now go back to the point where you rescued the fairy and use the springboard to teleport. Quickly head left and jump up to collect the key at the top of

the screen, then drop down to the left, open the door and rescue the FAIRY. Use the springboard to teleport.

Drop right onto the grey wall above the fairy to get rid of it, then rescue the FAIRY. Now head right and collect the KEY (assuming the egg has broken), then continue right until you reach a door—open it and rescue the FAIRY. Go back to the left a little to collect the BOOTS, go right until you reach the next FAIRY, then use the springboard to jump up to the top of the screen and rescue her. Use the springboard to teleport, grab the FAIRY to your right (assuming the beam below), then use the springboard to the left to teleport.

Drop down to the GOALS, head right past the high-speed dragons (watch out for the disappearing platform), then swing the noose with the GOBBLELLS to destroy the beam. Now simply rescue the FAIRY to complete the level.

### LEVEL 4

**FROM THE START:** Quickly head left and collect the key from the top of the screen. Don't continue left until you reach a door—open it and rescue the FAIRY within. Go back to the right and use the LEFT springboard to teleport. Go left a little and stand on the red platform above the key to grab it. Now grab the KEY, then continue left until you reach a fairy trapped behind a red brick wall. Stand on the edge of the wall to get rid of it, rescue the FAIRY, then go back to the right a little and collect the BOOTS.

Go right, then use the noose to jump up and rescue the FAIRY (jump up to the right-hand edge of the platform). Go left, swing the noose with the KEY, then go left and use the springboard to teleport. Head left past the bouncing bangers until you reach a door. Open it, then grab the FAIRY inside. Update the

## CARNAGE [POWERPACK 44]

Commodore's will continue to bring us nothing new. After all, the format has been done for years. However, our fine-sounding PowerPack game is a little more creative, so here's how to improve your handling.

**TRACK 1:** A nice, simple introduction to the game will give you a familiar feel before starting. If you can't distinguish you can't distinguish through the PDS, you can use the view of the planet to avoid falling behind.

**TRACK 2:** No more problems here either, although the straight can give a little trouble with the other driver. The 'U' bend at the end of the screen can be a problem when the cars are still together.

**TRACK 3:** A minor inconvenience, so most often don't worry about it. Instead, concentrate at the crossover point. If you feel a little badly about it, direct at the crosses to know the other race.

**TRACK 4:** The track calls for higher top speed plus a continued to negotiate the corners at the 5000-

right. The straight at the top of the screen can be chosen in a straight line - less control at high speed and you're a goner.

**TRACK 5:** The 'U' bend is the major problem here, especially when you increase your top speed again (when it's essential). Keeping a nose or tail is the only way to keep the other cars close.

**TRACK 6:** Similar to track five, the crossover gives you great speed to some (especially) others. Velocity is important here, but not so much. There are usually the best about 10-2000 rpm.

**TRACK 7:** The large bend at the left is a nightmare, using the high speeds of the other cars. Increased turn speed is a must, as well as a couple of miles. As before, less care at the crossover.

**TRACK 8:** In your second, this is the funniest of the

tracks. It's easy to manage, the opponents are not faster than before and there's no safe place to use a little boost. Guess you'll continue to play it.

**TOP SPEED:** Not that useful on the five first tracks, but must be upgraded if you will play on the top speed if you want to finish the game.

**POWER TOP SPEED:** Important if you're going to complete the last track, but not useful to use if your maximum speed is at its peak.

**ACCELERATION:** Again, not very useful on the earlier tracks, but vital on the last ones to get full at important head start.

**AIROM:** Only useful on the tracks. But don't have masses of it. Useful for and for 2000-2500 rpm at and when necessary.

**MEMO:** You can't have any for many of them as they are invisible. They should be used to show up the opposition at every possible opportunity.

■ Add a 'T' that is used enough from about a third of the way for serious

while attitudes for the fully competent. Do it, too. It is - you know you want it.

- 1 888 000000 0000 0 000
- 2 000 00000 0000 0 000

- 22 000 00000 0000 0 000

accelerate, and go left past the four wheel pressure leg and you reach the POWER - control.

Generally make your way back to the right, use the springboard to launch, then stop the bunny with the KEY to get rid of the ball. Because the PDS is slow, use the springboard to launch, push the GAMES L.L. then use the springboard in your left to help/lock. Quickly head right until you reach the first hole, then RETURN key to complete the level and the game.

## JUST FOR CHEATS

If you're not an Advanced Advantage user, visit the 3-bit magazine for the solution sheet, although, look on-line for more.

- POWER 000 176      invisibility
- POWER 007 08      invulnerability
- POWER 007 08      infinite time
- POWER 008 076      infinite lives

## RUFF & REDDY [IN THE]

Richard Beckler has been working away for a few keycodes to make up a quality solution to this enjoyable little budget game.

**LEVEL 1:** RIGHT - UP - rescue ALISA - LEFT - rescue ALISA - LEFT - DOWN - rescue ALISA - UP - rescue ALISA - LEFT - UP - RIGHT - RIGHT - rescue ALISA - DOWN - rescue ALISA - UP - RIGHT - RIGHT - RIGHT - RIGHT - rescue ALISA - then RIGHT to the end.

**LEVEL 2:** RIGHT - UP - rescue ALISA - DOWN - DOWN - rescue ALISA - UP - UP - LEFT - DOWN - DOWN - DOWN - RIGHT - collect PETROL - LEFT - DOWN - rescue ALISA - RIGHT - LEFT - RIGHT - rescue ALISA - rescue ALISA - UP - LEFT - rescue ALISA - RIGHT - RIGHT - UP - rescue ALISA - DOWN - LEFT - UP - rescue ALISA - LEFT - collect BALLOON PUMP - RIGHT - DOWN - RIGHT - DOWN - UP - using PUMP on BALLOON - UP - LEFT - LEFT - use PETROL on JET PACK to cross gap - LEFT - LEFT - rescue ALISA -

RIGHT - UP - rescue ALISA - LEFT - RIGHT - collect - DOWN - then RIGHT to the end. **LEVEL 3:** rescue ALISA - LEFT - DOWN - LEFT - UP - LEFT - rescue ALISA - LEFT - UP - collect COMPOSITE CHIP - RIGHT - rescue ALISA - LEFT - DOWN - DOWN - LEFT - DOWN - DOWN - DOWN - LEFT - RIGHT - RIGHT - DOWN - LEFT - RIGHT - DOWN - stand underneath

**SUBJECTIVE:** Use the COMPOSITE CHIP to rescue it to the end and the end of the level.

**LEVEL 4:** rescue ALISA - DOWN - rescue ALISA - RIGHT - RIGHT - rescue ALISA - RIGHT - RIGHT - RIGHT - rescue ALISA - RIGHT - UP - LEFT - UP - using SPARKS - rescue ALISA - DOWN - rescue ALISA - LEFT - collect COMPOSITE - RIGHT - UP - RIGHT - rescue ALISA - DOWN - DOWN - RIGHT - RIGHT - RIGHT - UP - rescue ALISA - DOWN - RIGHT - UP - LEFT - DOWN - LEFT - save up BLACKGATE with COMPOSITE - rescue ALISA - RIGHT - UP - RIGHT - then RIGHT to the end... game completed!

# MAYHEM

## STAGE 5: ROCKLAND

TIME LIMIT: 3:50

DUST QUOTA: 8

STAR QUOTA: 338

### CAST OF MONSTERS

**GREY SPYDES** These creep up frequently throughout the level, and are located in some nearby positions. Some follow you, some spit and some spit and follow. Make sure there's no trap just upmy business.

**FLAMBOGOTS** Much the same as the ones on earlier levels, but the bots on the level also have spikes on their backs. Therefore, they can only be killed by a charge.

**SPRYE BOTS** Looking rather similar to Blah and his team (duh... Blah...), they also creep up on you from the east along set paths in Mayhem's direction.

**SPRITZMAGES** The only inhabitant on Rockland's surface today, entirely completely and absolutely invincible. Yip, this one is real 'ard, and no team whatsoever will help you. The answer? Jump over it.

**CRACKENBALL** As with the earlier incarnations, this is indestructible, but it shouldn't prove to be much of a problem — it only appears once in the entire level on both the SAD and HAPPY versions.

**SPRYS & SPRYS** Identical to its previous counterparts, they can only be killed by Mayhem (charging up the most at once). One of these appears outside the training area, leaving and returning only from

**ROCKGOTS**. These are found throughout the level, and virtually all of them are springboard monsters. One flies, and finally, as stepping stones. There is a huge chain-half way along the level which must be crossed by using these stones. (It's very tough to

remember, but it's similar to the bases & Blast in that Mayhem can only kill it by charging into the front of it. Certain staff versions will turn their back (and options) on Mayhem, so have care.

### A BIG CHEERS!

Make believe though I said this series of maps wouldn't have been possible without the assistance of Jason 'Very' Wickham (and he's right), our long-time Game and Screen Friends for creating such an awesome game in the first place.

## SAD Ringed ahead leave magic dust

# GAMEBUSTERS

## PSYCHO HOPPER

(MASTERTRONIC)

This is the hopper when some designers went Over the Top. Jump with a good aim. For an infinite supply of lives, simply type in the following listing.

- 1 000 00000 0000 0000 0000 0000 0000
- 2 000 00000 0000 0000 0000 0000 0000
- 3 000 00000 0000 0000 0000 0000 0000
- 4 000 00000 0000 0000 0000 0000 0000

## MALFUNCTION! NEED MORE INPUT!

Got a new? From some days? Movement any direction? If you have, and expect it to be the grand response of a CIB software developer, send your friend tips, single solutions, Action Replay, POKEs, and general gameplaying advice to Andy Haines' Mailbox, Commodore Forum, 40 Moorcroft Street, Bally, Avon, BA1 1BB. Don't forget to include your name and address, along with some family-sized packets of White's.

## WIZBALL

### COLOUR COLLECTING

This is perhaps the hardest part of the game, both to understand and to play, and there's a great deal to you who will be amazed at what they can collect the red. Collecting the diamonds is a pretty tricky responsibility, as there are some that can be collected with the red, blue, and yellow use the best colours you can get.

- **JUST-BLUE** drops will trigger a red red.
- **BLACK-RED** drops will make the red collectible.
- **PURPLE** drops will make the red sticky.
- **SPARK** drops can give an extra life.
- **BLACK** drops turn out the lights and every remaining shot has been used.

Normally, if you have a black and white collection, you're not going to get very far at all with this game. In fact, collecting diamonds, keep an eye on the three diamonds at the bottom of the screen, the lights that are in particular. If the diamond you collect has no effect on the collection, then that colour is not needed on that particular level. There are only three levels to play at any one time, so it's fairly easy to

keep track of the various colour mixing requirements, if it didn't, you'd have everything.

### GENERAL TIPS

- If things are looking impossible, take a break. Lots of items, and how to use the action, where you'll be unsure to identify.
- When starting between levels, look for items that indicate where the pipe leads up or down.
- Level 20 is the last one you'll need there, and the one to be found at the far left of the level.
- The bonus level is granted to the first with level 20, and two extra lives can be earned with a bit of walking.

- In addition, when first discovered for every 100,000 points scored, and your score reaches the maximum of 100,000 there is:

What was probably the size of currency was nearly every amount of remaining numbers.

number on the endpoint will take you to the first level you left uncompleted. However, if you have an Action Replay cartridge and it has, why not? you might like to try these POKEs if you have a reasonably decent game.

POKE 17144,00 Infinite lives  
POKE 17144,01 Invulnerability  
Anything, my friend, is for us.

# TECH TIPS

C64's are tricky little blighters. Few truly understand their dark complex nature. One who does is Jason Finch, and he doesn't care who knows it.

## SORTED, MATE!

Dear Technic Tip,

1 I used a Commodore 40 pin data reader to get the memory address of the ROM chip of the unit and I discovered that this address is the same as the address of the ROM chip of the Commodore 40 pin data reader. I used a Commodore 40 pin data reader to get the memory address of the ROM chip of the unit and I discovered that this address is the same as the address of the ROM chip of the Commodore 40 pin data reader.

2 How do you know if a ROM chip is bad? I used a Commodore 40 pin data reader to get the memory address of the ROM chip of the unit and I discovered that this address is the same as the address of the ROM chip of the Commodore 40 pin data reader.

3 I am always reading

articles about how to 'fix' this, that or the other in

various computer magazines. The trouble is that the same method is recommended, which isn't really true. I have written a Basic sort routine which works on the binary principle. It is slower than the bubble sort for the first 10 variables but after that it will work better, single and even quadruple the speed of the bubble sort routine.

```
1 DIM A(10)
2 FOR I=1 TO 10: A(I)=INT(RND*255)
3 NEXT I
4 FOR I=1 TO 10: A(I)=INT(RND*255)
5 NEXT I
6 FOR I=1 TO 10: A(I)=INT(RND*255)
7 NEXT I
8 FOR I=1 TO 10: A(I)=INT(RND*255)
9 NEXT I
10 FOR I=1 TO 10: A(I)=INT(RND*255)
11 NEXT I
```

The variable I is the total number of strings to be sorted. Add to the array containing the strings. I am always using BASIC for speed!

## I LIKE TO MOVE IT

Dear Technic Tip,  
While experimenting and coming up with the new character sets from

I've come across a problem that of others to solve the file. I

found out that the best place to store these is from location \$1000 to \$100F, which uses up part of the bitmap screen. Unfortunately I want to use the bitmap screen for something else. I don't want them at other places lower in memory either. So please could you either give me a Basic program that either moves the strings to lower or moves the bits to which Basic programs are stored? Thanks very much and keep up the good work of this most excellent section of CF!  
David Gorman, 6444

If you go back to CPRO you will find a letter about SWITCH-BASIC that deals with the particular type of problem. In the meantime,

The author refers you to the address of memory you need to store in BASIC to make sense of all this. Now.

1. You can find the address of the ROM chip of the Commodore 40 pin data reader to get the memory address of the ROM chip of the unit and I discovered that this address is the same as the address of the ROM chip of the Commodore 40 pin data reader.

2. You can find the address of the ROM chip of the Commodore 40 pin data reader to get the memory address of the ROM chip of the unit and I discovered that this address is the same as the address of the ROM chip of the Commodore 40 pin data reader.

3. You can find the address of the ROM chip of the Commodore 40 pin data reader to get the memory address of the ROM chip of the unit and I discovered that this address is the same as the address of the ROM chip of the Commodore 40 pin data reader.

4. You can find the address of the ROM chip of the Commodore 40 pin data reader to get the memory address of the ROM chip of the unit and I discovered that this address is the same as the address of the ROM chip of the Commodore 40 pin data reader.

## SHORT'N' SWEET

Dear Technic Tip,

1. I like to use BASIC for speed!

2. I like to use BASIC for speed!

3. I like to use BASIC for speed!

4. I like to use BASIC for speed!

## WHERE TO STORE CHARACTER SETS

the screen. There are 256 bits, known as pixels, across the screen and 200 down it.

There is no single way to realistically expand low-resolution pictures when the top displays one of 16 colors. There is one, the color from the adjacent vertical. They are produced using a dithering filter in a single plane of memory. You would have to double the dithering and create two sets of bits.

## NEW RECRUIT

New Techie Tip.

Have you got into Basic programming on the C64 and the floating up, I am having problems with the C64. I want to use the command you refer to, but the screen is blank. I have the command you refer to, but the screen is blank. I have the command you refer to, but the screen is blank.

- 1 How do you allow the screen for all seconds?
- 2 How do you pause the screen until something happens to you?

Ken Fitzwilliam, Australia

The C64 uses large called control codes to do a lot of the special stuff. To move the cursor, change the border color, select mouseclick and screen. Give screen some cursor, a blank to clear the screen.

There is a block in the C64 which is controlled using the variable V. This variable is also altered, and represents the number of 1/60ths of a second that has elapsed since I was last there. Here is an example of how to use this control coding.

- ```
10 screen "HELLO!"

## DOTTY DESIGNS

New Techie Tip.

Recently, throughout the country, a lot of weird pictures have started to appear in poster shops. They started off in single colors with big dots.

How have they changed into the full technicolor jobs with swirling patterns and lines?

It's an angle thing about these posters?

How do you look at them for a while you start to see a view?

Dimensional picture appearing?

How you start these posters?

How you draw of these there you get any?

Are there any of these things available on a C64?

How are they produced?

Can you give me a program that will create these pictures on the C64?

Robert Pooking, Berkeley

Seeing an item in a computer shop is my second choice. It would be hard for me to have noticed them. Oh perhaps I was just attracted there by the number of people going into poster shops going.

Can you say it?

Dotty posters? Yes, I've got one of some dolphins.

These things are beautiful.

When going, you have standing at it for ages and I can't see any 3D printers.

## FLICKER FIXER

New Techie Tip.

I have written a machine language program and have used some interesting to get the border and background colors to change at random positions when the screen. However, every time I change colors there is this annoying flickering when they change. I have never seen a game with anything like that, except changes on water surface flows.

- 1 What causes this?
  - 2 Can I get rid of it?
  - 3 How do I get rid of it?
- Greenie King, Leeds

The problem is certainly the fact that the raster is not 'locking' in exactly the right place to produce smooth transitions between color changes. You have to get your head around the concept of cycles before you understand what's going on. And I don't know those need things with a great set and basically each-instruction in the machine language requires a very short time to run, a command such as STX, ROR, for example, would take two cycles. One cycle is one-sixth of a second for the length of time I take time to draw a

Machine language program. You can see the machine language code when you run the program. It's in the machine language code.

Thinking of writing a game? Then don't settle for cardboard characters. Spruce up your sprites by taking a tip or two from C64 graphics gurus, John and Steve Rowlands...

**T**hey sighers, sprites. Some people just can't handle them. Not an operational word, you understand, some people just can't get their heads around designing and animating decent sprites, not even some professional programmers - how many times have you played a game in which the characters look like cardboard rectangles? For many, it's not *Wishful Thinking* (remember those sprites are probably the most complex use of graphic manipulation to get yourself a keyboard and a joystick and assume to be educated).

## WHAT ARE SPRITES?

Sprites are, very simply, blocks of data which can be moved around by the computer independent of the rest of the screen (sometimes they're referred to as MOBS - Movable Objects Blocks). Sprites can be drawn with literally three characters by 31 pixels high, and each sprite takes up 64 bytes of memory (the fact that's not used by the way). Sprites are a godsend for games - obviously you can't draw a game on paper, so you're stuck with a computer game that's almost entirely a sprite. The only drawback to the coloured game designer's dream is the number of sprites available, a maximum of 2048 on the C64. However, there are ways to get around this (see SPRITE BANKING).

## SPRITE BANKING

The C64's memory is divided into video banks, each 16K, but only one bank can be accessed by the computer any one time. A video bank technically has enough space for 200 sprite images, roughly because a byte can only hold values from 0-255. Although you can store sprite images anywhere in memory, only those in the current video bank can be used by the C64. But don't forget

# But is it ART?

That's the case for character set (CS) take up space in the bank too. This means you can't use 200 sprites fully with, although most of your games used around 150 sprites, the other space taken up by two character sets and currency. As with characters, sprites can be sprites 0' banked into the bank's character set, primarily to save precious space.

## SPRITE TYPES

Like characters, sprites come in two forms: 1-bit or multicolour. But both share the same basic code. Sprites are by now as a default, but for multicolour sprites you need to POKE the relevant location (sprite, or 0024 in decimal). Regardless of whether a sprite is in 1-bit or multicolour mode, its colour will remain the same (sprites can use the full 16 colour palette). 1-bit sprites have the obvious advantage of extra detail, along with the limit of only one colour. In most cases 1-bit sprites are combined with other sprites to produce more detailed graphics.

The most obvious example is the *Mighty Heroes*, which is a multicolour sprite combined with a black 1-bit routine to produce a sharp, detailed image. The main characters in both *Cybernetic Mission* and *Strategic* are also expanded to use sprites to produce more detailed images - small effects.

However, using 1-bit sprites for the main character limits the amount of sprites or screens and also effectively doubles the amount of animation frames needed (even though multicolour sprites offer more colours the number pixels can prove a problem, especially as sprites are so

small. The solution, the bonus points in *Mighty Heroes* are created and are using in the last of detail offered by multicolour sprites. As a result, the more are a lot more effective, so it's worth experimenting with both sprite types.

## PRIORITY

There are effectively two types of priority: sprite-to-sprite and sprite-to-background. Even though the 68010 is a powerful beast, it isn't the best for sprite manipulation. Therefore, if sprite moving, you must take priority over the main screen. Screen 0 has the highest priority and screen 1 the lowest. In other words each sprite has a lower priority than the previous one (again with limits of course).

The second type is sprite-to-background priority, which is controlled by colour planes (or MANS in decimal). As a default, sprites have priority over background data. To make a sprite appear behind the background, the relevant bit location (also needs to be POKE'd). However, sprite-to-background priority is a little more complicated. Graphics on the background sprite mode (1-bit or multicolour), sprites always have priority over the background colour. In 1-bit mode, when characters have priority, the sprites will appear in front of the background colour but behind any character data. In multicolour mode, again when characters have priority, sprites will appear in front of the background colour and multicolour 1-bit, but behind multicolour 1-bit and the character colour.

If you look at *Mighty Heroes* in operation, you will see that *Mighty Heroes* appears in front of the city and mountain colours, but behind the new colours, supporting the new colours. Careful graphics design and experimentation will allow you to produce some really striking effects.

## EXPANSION

In the early days of the C64, expanded sprites were used (sprites 16), and main sprite graphics took from 100000. However, the main graphics designers use sprite expansion more now. For the multicolour sprites can be expanded vertically, horizontally or even both, which can effectively double the size of a sprite. For example, expansion can be used to make certain items bigger than others, which is best if not used together. Generally speaking, multicolour sprites should only

Most of the smaller sprites in *Mighty Heroes* only have three frames of animation.

## MORE TECHY PROGRAM-TYPE STUFF

The following programs have been included not only to illustrate some of our article links and algorithms (and also to show off... again), but also to allow any of our budding programmers to include the effects in their own programs. Any of the following routines can be sprayed and run independently, but if you want to include them in your latest game simply POKE in the data before your program is run. You use the 68010 call when you need the effect to run.

The programs can fit into the memory of the same two banks with the few programs are good you to last month's 'But is it ART?' but they should be used

simultaneously. Sorry 'n't, but that's the way the world looks better side down. Or something like that.

## MIXY COLOURS

This program has been illustrated for '1-bit colour' techniques and, when used with your own graphics, will allow you to add more colour to your sprites. The program colour 16K, will merge the banks colours 16 lines it supports (although the effect will not be visible with your own sprite graphics). The colour table is arranged in pairs (printing with sprite 0) and is located from 0000 to 4000 inclusive. Alternatively you can change the 'mixer

before following the program, starting with the value 02 in line 10. If you don't want any colours on a particular sprite, simply make each colour the same. If you change the DATA values in the program, 00000000 70-AD 110 110 000 000 or you'll get a 24x12 area. It can also be used to create a 24x12 area.

Parlez vous Machine language? Sprechen sie Assembly? Niet? Puis Jason Finch, technicienmeister supremissimo teacherals-vous... er, how to. Okay?

**T**he month we're going to look is more detail at the last machine instruction: the instruction set — which is basically just the list of words that the processor recognizes as ML — can be divided into different types of instructions. So, I'll show you about the categories and branching operations, the sort of ML equivalent of "if something is something then do something else." The load, store, compare and branch instructions are the ones that you'll probably hear about. And what a great job that is. You think it's the ones you'll be using the most. This month I'll also go into the ones you understand everything about: the 80, index registers. It's more for those who work in order to do this, I admit.

Overnight I had a white tiger. It's a word that the compiler that follows it is an assembler's check out but have to remind yourself what the tiger is. I start with a load word of what you learned last month.

#### ■ BRIEF REMINDERS

I hope you've got the idea of loading into your load by now, because if you haven't you might as well give up and join the foreign legion or re-read last month's feature. It's a lot less drastic. You should have also seen what that you can only really use with three main variables in ML — the accumulator and the 8, 16 index registers. You only need that set loaded or everything being the kind of take \$224, last month. This is a 16, equivalent of the Basic instruction set). Remember that the last-again (as though that is an actual number and not a location in memory) that

#### ■ COMMANDS SUMMARY:

LDW Load accumulator with value  
LDL Load 1 register with value  
LDH Load 1 register with value

STW Store accumulator in memory  
STL Store 1 register in memory  
STH Store 1 register in memory

MOV Move 1 register by one  
MOV Move 1 register by two

#### ■ PROGRAM 2.1

##### ■ BASIC

0031 LDA #00000000
```

I said LDA #000, that the Basic equivalent would have been LDA#000, because we wouldn't be loading the accumulator with the number stored at location 0.

Being in all about moving things elsewhere, like you may store your utility bills into your load when you check out something in a register. But the accumulator, you can store it in memory. Being can only be done to memory — you CAN'T store it in memory in another number. That's like saying, "put my test in my class," in something you say. So 075, 0004 is the equivalent of LDA

# MEAN machine CODE

monitor to avoid the mess of machine language. You should get the same effect as with the Basic program. Now by the second version of the same thing, do one or two right in the box.

I prefer the first one because it's more easier to read ML programs do exactly the same job. The second one uses different registers

However, you will notice that the use of 0004 does not change the value in the accumulator, but 0005 (00000000) you wouldn't expect this. When you say LDA in Basic, it doesn't change what 00000000 is. Just make sure that your LDA match your LDA and so on. There would be no need changing the loader value by doing LDA, then followed by 0005 00000000 you would be doing LDA 00000000, which approximate machine.

#### ■ ADDRESSING MODES

I mention you the subject of different addressing modes last month. These are the ways that you refer to commands. When you put a load-again before numbers, it's called immediate addressing. Why? Because the number's immediately obvious to the computer, the CPU doesn't have to think about where it's going to get the number from. The other addressing mode you've seen is absolute addressing. That's when you refer to other memory locations. For LDA, 0004 you immediate addressing and 0005 you absolute addressing.

#### ■ ABSOLUTELY FABULOUS

Although you can't store immediate addressing with your instructions, you can store absolute addressing with load instructions. Absolutely FAB, say you wanted to do LDA#0004. This means load the contents of location

#### ■ MORE AND MORE

Type in the Basic version of program 1 and see if you should find that you get a word right appearing in the middle of the screen. The screen should have a red border and a green background, and the words should be plain. A friend's contribution, but it's only in basic a point. In ML, the result will be a series of load and store instructions. You could use the same register for them all, and probably the result be the accumulator. Alternately you could use each one of these registers. Let's look at an example of ways you can transfer the program in machine language. Use your 16000

Apple Computer monitor, or similar, and enter the first ML version of program 1. When you've got the program's display, enter 0004 from within the

#### ■ LINE-BY-LINE ANALYSIS

0000 LDA#00000000 (load the accumulator with the value of 00000000 in the register in the top left-hand corner of the screen.)  
0001 LDA#00000000 (Load value in 00000000 register. The value in 0000 is the value code for the top-left-hand character.)

0002 STA#00000000 (Store the contents of the accumulator at 00000000. This represents the top-right-hand corner of the screen. So the accumulator contains the value 0000 for the character in the top left, this has the effect of copying that character to the right-hand side.)

0003 LDA#00000000 (The value in the top left is the top-left.)  
0004 LDA#00000000 (Load the accumulator with the number 0.)  
0005 STA#00000000 (Store 0 in location 0000. This is the value in 0000, 0000, and will get the letter 0 in the top-left corner of the screen.)

0006 LDA#00000000 (The contents of the accumulator are unchanged, so this clears the register.)  
0007 STA#00000000 (Store the value of 0000, 0000, 0 and will change the value of the 0 in the register.)  
0008 STA#00000000 (Storing 0 in memory, follow up with the 00 which brings in 0 and the machine language number.)

# SPECIAL OFFER!

## THE MAGNUM PHAZER GUN (FOR THE COMMODORE 64/128)

Enter a new phase of computer entertainment with the Magnum Lightbearer. Unleash your imagination and take up the challenge of the six action-packed games included in the pack.

Games included: Operation Wolf, Gungliger, Cosmic Storm, Ghost Train, Baby Blues and Circus Busters. (Different games available for Amiga, Atari ST/STE, Spectrum and Amstrad computers).

RRP £29.99 (U.S. PRICE £12.99 - £1.50 PP)

PHAZER GUNS ALSO AVAILABLE FOR THE ATARI ST/STE RRP

£29.99 (U.S. PRICE £12.99), THE COMMODORE AMIGA (ALL

MODELS) RRP £29.99 (U.S. PRICE £14.99), THE SPECTRUM DATA

RRP £29.99 (U.S. PRICE £12.99), AND THE AMSTRAD 4848 (25

RRP £29.99 (U.S. PRICE £12.99)

LIGHT BEARER ALSO AVAILABLE FOR THE COMMODORE 64/128

RRP £29.99 (U.S. PRICE £12.99) AND FOR THE COMMODORE

AMIGA (ALL MODELS) RRP £29.99 (U.S. PRICE £24.99)

PLEASE ADD £2.50 FOR POSTAGE AND PACKING FOR

THE ABOVE ITEMS.

## C64/C128 PRINTER INTERFACE

The C64/C128 printer interface is designed so that you can connect almost any parallel/electronics (IBM) compatible printer to your C64/C128 computer.

Complete interface with lead - **£29.99 inc PP**

## C64/C128 COMPATIBLE DATA RECORDER

**£19.99 inc PP**

Commodore C64/C128 compatible Data Recorders with tape counter, fast forward, rewind, stop/jog, play and record facilities. Supplied complete with lead and ready to plug straight into your computer

# \* HURRY - LIMITED STOCKS!

Unleashing the new Warlock, delivers a substance game at the time of its release. The name "Lightbearer" and now there's Warlock the Avenger, the third game in a series.

Designed by Dave Cook, Warlock the Avenger takes the player on a journey into the dangerous world of Britain, where the evil Lord Astaroth has returned to lead the best into glory. From resurrection your ancient spells and find your way through light trap areas dragons, mysterious unknown obstacles, leaving some passage ways and keeping Astaroth's monstrous minions at bay. Your task is to find and destroy the evil power. Only by unleashing the magic power of Chaos can find victory be yours.

\* Use elemental forces to cast the most effective spells

**PRICE £24.99 INC.PP**

\* Under Solace and work together for the two player game

\* Special graphics for solving skills and Astaroth's cunning army of monsters.

## DO YOU SUFFER WITH C64 TAPE LOADING PROBLEMS?

Have you ever purchased a game only to find that it won't load? The most common reason for loading difficulties is caused by the tape head being out of alignment with the cassette tape. The constant tape head alignment kit enables you to align your tape singly and quickly. Non-technical skills are required. Step-by-step picture guide. Test and recalibration carried out in minutes! The kit comprises: Tape alignment screws, special precision controller plus full instructions. Only £9.99. Alignment kit also available for Amstrad CPC 484 and for the Spectrum computer. Please note which computer when ordering.

If you would like to be put on our regular mailing list for special offers etc. please write and ask for us, naming which computer model you have. We also deal with Spectrum, Amstrad, Atari, Amiga and PC Computers.

ALL ORDERS SENT BY RETURN: CHEQUES/VISA/ACCESS/PO'S
