

## Announcement

### 3RD INTERNATIONAL CONGRESS ON POLYMER PHOTOCHEMISTRY, 5–10 SEPTEMBER 1993, SESTRI LEVANTE, GENOVA, ITALY

This is an announcement for the *3rd International Congress on Polymer Photochemistry* to be held in Sestri Levante, Genova, Italy. The congress is organised by Manchester Metropolitan University and the University of Milan. The theme of the conference will be devoted to both academic and industrial aspects of the radiation chemistry, photochemistry and photophysics of polymeric and related materials. The latter include monomers, prepolymers, oligomers, antioxidants, photocatalysts, light stabilizers, dyes, pigments and optical brightening agents and composites. Specific areas to be covered include photopolymerization, photoimaging sciences, photoinitiators, photografting and their applications in technologies such as coatings, resists, electronics, composite membrane systems, printing and holography, photography, electrophotography and photoconductive polymers, optical and photochromic properties of polymers, luminescence phenomena, solar energy applications, photodegradation and photostabilization of polymers and photodegradable plastics.
