

Electrical Communication

Technical Journal of the International Telephone and Telegraph Corporation, 1922 - 1966.

List of articles (with notes and comments)

Compiled by David W Knight (Ottery St Mary, England). Version 1.03, 10th March 2013.
dave@camerasunderwater.co.uk

Foreword:

Electrical Communication is the ITT / STC technical journal for the period from 1922-1966. It contains a wealth of articles which are of historical, scientific and technical interest. Some of the articles also appear in the Bell System Technical Journal (BSTJ, available from:

<http://www3.alcatel-lucent.com/bstj/>) and in other academic journals, but many are unique.

Individual issues of EC can be downloaded from the Colegio Oficial Asociación Española Ingenieros de Telecomunicación (COIT) website:

<http://archivodigital.coit.es/index.php/mod.articulos/mem.catalogos/> .

The files available from COIT consist of scanned pages collected into PDFs. With the information presented in that form, the only way to search for articles is to download each issue and read the contents page. The process is laborious, and still leaves anyone who might like to make use of the information with the task of compiling notes and citations for future reference. This document is intended to alleviate that problem. It shows the contents of each issue, so that the relevant file can be opened or downloaded if an entry seems interesting.

Ideally, all of the articles should be listed in machine-readable form; but a means for automatic production of such lists was not available when this document was produced. Hence although some articles (particularly ones containing keywords interesting to this author) are properly listed, many of the entries are simply images of contents pages. Still; it is not difficult to scroll-through looking for potentially interesting articles, and so it should prove useful to others.

DWK, Nov. 2010.

1(1), Aug. 1922.

Recent developments in electrical communication. J L McQuarrie. p4

Telephone repeaters. Pt. 1. Description and Operation. B Gherardi. p6

The dynamical theory of amplifying and oscillating systems. H W Nichols. p11

A new type of high power vacuum tube. W Wilson. p15

[same paper as BSTJ-1(1) 1922, p4-17]

A unique demonstration of the public address system. p22

Some notes on statistics. S L Andrew. p27

Rehabilitation of the Antwerp factory. J S Wright. p32

Analysis of the energy distribution of speech. I B Crandall, D MacKenzie. p34

[same paper as BSTJ-1(1) 1922, p116-128]

The nature of speech and its interpretation. H Fletcher. p41

[same paper as BSTJ-1(1) 1922, p129-144]

1(2), Nov. 1922.

The Hawthorne plant of the Western Electric Company. H F Albright. p3.

The future of long distance telephony in Europe. F Gill. p8.

Telephone repeaters. Pt. 2. Application of repeater. B Gherardi. p27

Notes on loaded long-distance telephone cables in Europe. P E Erikson. p37

The physical characteristics of audition and dynamical analysis of the external ear. R L Wegel. p43.

[same paper as BSTJ-1(2) 1922. p56-68 (BSTJ version includes synopsis)]

The binaural location of complex sounds. R V L Hartley, T C Fry. p51

[same paper as BSTJ-1(2) 1922. p33-42]

A low voltage cathode ray oscillograph. J B Johnson. p57

[same paper as BSTJ-1(2) 1922. p142-151 (BSTJ version includes synopsis)]

The business cycle: the interest of the telephone industry in its analysis. F E Richter. p63

Power losses in insulating materials. E T Hoch. p69

[same paper as BSTJ-1(2) 1922. p110-116]

The Heaviside Operational Calculus. J R Carson. p73-79

[same paper as BSTJ-1(2) 1922. p43-55]

1(3), Feb. 1923.

A national telephone service. H B Thayer. p3

The recent transatlantic radio telephone tests. p12

Notes on radio. O B Blackwell. p15

Installation of the first telephone toll cables in Japan. R P Ashbaugh. p21

Telephone transmission over long cable circuits. A B Clark. p26

Flat type relays. D D Miller. p41

Specializing transportation equipment in order to adapt it most economically to telephone construction and maintenance work. J N Kirk. p50

Telephone and telegraph statistics of the World. S L Andrew. p60

1(4), Apr. 1923.

Frank Gill OBE. p3

The new Simplon cable. R A Mack. p4

Practical application of carrier telephone and telegraph in the Bell system. A F Rose. p16

The Western Electric exhibit at the Rio De Janeiro Exposition. N H Slaughter. p24

Public address systems. I W Green, J P Maxfield. p27

Use of public address system with telephone lines. W H Martin, A B Clark. p46

Mobile public address system. E S McLarn. p57-63

The budget plan of the Bell system. C A Heiss. p64-68

2(1), July 1923.

Organisation of the Bell telephone system. p3

Trans-oceanic wireless telephony. H W Nichols. p11

Economics of Engineering. F Gill. p23

The nature of language. R L Jones. p32

Use of labor-saving apparatus in outside plant construction work. J W Kirk. p46-57.

2(2), Oct. 1923.

European long distance telephony. p61

Telephone transmission over long distances. H S Osborne. p81

25 years of successful cooperation in Japan. D F G Eliot. p95

Recent developments on telephone equipment for train dispatching circuits. W H Capen. p111

Telephone traffic control for tramways. p141

Telephone and telegraph statistics of the world. p146-150.

2(3), Jan. 1924.

The Bell System Research Laboratories. E B Craft. p153

British broadcasting. H M Pease. p164-167

The Birmingham broadcasting station (5IT). A E Thompson. P168

The origin and development of the transmission equation. R Appleyard. p183-188.
[K. R. Law and its demolition by Heaviside].

The taxicab telephone service in Stockholm. S M Catterson. p189

The work of installation of the underground telephone cable Milan- Turin-Genoa.
G Magagnini. p192-200.
[Correction: see Vol. 3(2), p150.]

2(4), Apr. 1924.

The Stockholm-Gothenburg telephone cable. E Ekberg. p203.

Permalloy, a new magnetic material of very high permeability. H D Arnold, G W Elmen. p226

Permalloy loaded cable. F B Jewett. p232

The New Shisakajima submarine cable. K Kawakimi, K Shimizu. p235

High Quality transmission and reproduction of speech and music.
W H Martin, H Fletcher. p238-249

Radio Telephone signalling - low frequency system.
C S Demarest, M L Almquist, L M Clement. p250

Telephone transformers. L W Casper. p262-279.

3(1), July 1924.

Science and Business. J J Carty. p3

Making the most of the line. F B Jewett. p8

European international telephony. F Gill. p22

Telephone transmission standards in Europe. L C Pocock. p28

The Transmission Unit. R V L Hartley. p34-42.

Auditory masking and dynamics of the inner ear. R L Wegel, C E Lane. p43

Modern methods in train dispatching. J C Latham. p57

Wave form examination with cathode ray oscillograph. N V Kipping. p69-75

3(2), Oct. 1924.

Description of damages done by the earthquake to wired and wireless telegraph and telephone installations of Japan. S Inada. p79

Restoration of the works of the Nippon Electric Company. A G Jillard. p103.

The Stethophone. H F Dodge. p106.
[See also. BSTJ-3(4) 1924. p531-]

A telephone transmission reference system. L J Sivian. p114

Carrier telephone equipment for high voltage power transmission lines. N H Slaughter. p127

Supervisory systems for remote control. J C Field. p134.

Telephone and telegraph statistics of the world. p145-149.

| Recent Achievements | | 5 |
| Telecommunications in Western Europe by <i>E. M. Deloraine</i> | | 14 |
| Transistor Carrier Multiplex Equipments: Part 1—Broad Design and Salient Circuit Features by <i>M. E. Collier, H. Lehnich, and L. C. Deschuytere</i> | | 34 |
| Transistor Carrier Multiplex Equipments: Part 2—Deep-Rack Construction (Mark 6 Multiplex) by <i>M. E. Collier</i> | | 48 |
| Transistor Carrier Multiplex Equipments: Part 3—Front-Leadout Construction by <i>Richard Rabe and L. C. Deschuytere</i> | | 74 |
| Statistical Method of Analyzing Long-Term Tropospheric Loss by <i>Michael Schilder</i> | | 99 |
| Standard Telecommunication Laboratories by <i>J. K. Webb</i> | | 109 |
| Multiplier Phototubes for Single-Electron Counting by <i>E. H. Eberhardt</i> | | 124 |
| Determination of the Probability Distribution of the Number of Secondary Electrons by <i>Z. Bay and G. Papp</i> | | 134 |
| Visual Presentation for Flight Simulators by <i>J. Baradat</i> | | 144 |
| United States Patents Issued to International Telephone and Telegraph System; August 1963 through January 1964 | | 149 |
| Notes | | |
| Busignies Receives Electronics Award | | 4 |
| Kurth Receives Papers Award | | 13 |
| Ulrich Receives Papers Award | | 13 |
| Book: Pert Cost | | 33 |
| Book: Maintainability and Reliability Handbook | | 152 |

| Volume 40 | 1965 | Number 2 |
|--|------|----------|
| This Issue in Brief | | 154 |
| Recent Achievements | | 157 |
| Microwave Radio System for Multichannel Telephony and Television in the 6-Gigahertz Range | | |
| Part 1—Basic Features by <i>D. Davidson, G. Dawson, O. Laaff, and M. Müller</i> | | 173 |
| Part 2—Solid-State Microwave Power Generators by <i>R. H. Gorringer and J. I. C. Philips</i> | | 184 |
| Part 3—Wide-Band Intermediate-Frequency Amplifiers by <i>O. Bettinger</i> | | 192 |
| Part 4—Cassegrain Antenna by <i>D. G. Ware and G. Stemp</i> .. | | 200 |
| Part 5—Auxiliary Radio Relay System BFM24/6000 by <i>A. Liekens and E. Reygaerts</i> | | 209 |
| Carrier Telephone System for Mine Railroads by <i>K. Lindig and E. Rempp</i> | | 215 |
| Theory and Design of an Adjustable Equalizer by <i>W. Haas</i> | | 225 |
| Transmission-Line Mismatches and System Noise Figure by <i>E. Imboldi</i> | | 233 |
| Computer Assistance to Pentaconta Engineering by <i>A. J. Henquet and G. Le Strat</i> | | 242 |
| Power-Frequency Induction on Coaxial Cables With Application to Transistorized Systems by <i>J. Kemp, H. W. Silcock, and C. J. Steward</i> | | 255 |
| Photo-Etching for Reliability in Electron-Tube Manufacture by <i>B. Thomson</i> | | 266 |
| Selenium Rectifiers in 1965 by <i>H. P. Hempel</i> | | 270 |
| World's Telephones—1964 | | 284 |
| Notes | | |
| Book: Richtfunkverbindung (Radio Links) | | 241 |
| Etching of Valdemar Poulsen | | 283 |

| Volume 40 | 1965 | Number 3 |
|---|------|----------|
| This Issue in Brief | | 294 |
| Recent Achievements | | 297 |
| Optical Character Readers for Automatic Document Handling in Banking Applications <i>by W. Dietrich</i> | | 312 |
| Automatic Postal Check Handling in Germany <i>by K. H. Klonne</i> .. | | 328 |
| Microwave Power Sources Using Solid-State Devices <i>by L. Lewin and J. Paine</i> | | 338 |
| Aerial Branching System Using Interdigital Filters <i>by S. W. Conning</i> | | 352 |
| Otto Scheller and the Invention and Applications of the Radio- Range Principle <i>by Robert I. Colin</i> | | 359 |
| Dewline After a Decade of Field Operation and Maintenance <i>by William G. Donaldson</i> | | 369 |
| Estimating Voltage Surges on Buried Coaxial Cables Struck by Lightning <i>by John Kemp</i> | | 381 |
| Characteristics and Applications of Reed Contacts <i>by H. Rensch</i> .. | | 385 |
| United States Patents Issued to International Telephone and Tele- graph System; February–July 1964 | | 398 |
| In Memoriam—Gerhard Haessler | | 403 |

| Volume 40 | 1965 | Number 4 |
|---|------|----------|
| This Issue in Brief | | 406 |
| Recent Achievements | | 410 |
| The 25th Anniversary of Pulse-Code Modulation by <i>E. M. Deloraine and A. H. Reeves</i> | | 421 |
| Laboratoire Central de Télécommunications by <i>H. Tanter and P. Grandry</i> | | 435 |
| System Engineering: Its Approach and Operations by <i>J. W. Halina</i> | | 450 |
| Modulation and Coding by <i>A. Chatelon</i> | | 461 |
| Small-Diameter Coaxial Cable Using Moulded-Shell Construction by <i>R. Tatman and B. E. Ash</i> | | 471 |
| Relationship Between Attenuation and Wire-Braid Design for Flexible Radio-Frequency Cables by <i>L. R. Spicer</i> | | 487 |
| Monitor for Color Television by <i>R. Deubert and A. Rappold</i> | | 493 |
| Infrared and the Nimbus High-Resolution Radiometer by <i>R. V. Annable, K. L. DeBrosse, H. A. Leiter, and W. H. Wallschlaeger</i> | | 500 |
| United States Patents Issued to International Telephone and Telegraph System; August–October 1964 | | 508 |
| Note: | | |
| Reeves Receives Ballantine Medal | | 434 |

Monitor for Color TV. R Duebert, A Rappold. p493-499.
CCIR 625, NTSC / PAL / SECAM.

Infrared and the Nimbus High-Resolution Radiometer.
R V Annable, K L DeBrosse, H A Leiter, W H Wallschlaeger. p500-507.

| Volume 41 | 1966 | Number 1 |
|---|------|----------|
| This Issue in Brief | | 2 |
| Paris Network and Numbering Plan by <i>J. P. Basset and R. Mugnier</i> | | 5 |
| Introduction of Pentaconta Switching in Paris by <i>J. P. Basset and R. Mugnier</i> | | 12 |
| Pentaconta System Remote Line Units by <i>J. P. Basset and R. Mugnier</i> | | 30 |
| Pentomat <i>T</i> Private Automatic Branch Exchange by <i>G. Barbuio</i> .. | | 35 |
| Flexible Routing Plans by <i>E. P. G. Wright</i> | | 48 |
| Sensitivity Coefficients as Criteria for Noise in Telecommunication Lines by <i>E. Widl</i> | | 55 |
| Measurement of Magnetic Properties of Thin Films by <i>A. Judeinstein</i> | | 65 |
| Magneto-Optic Astrometer for Measurement of Magnetic-Thin-Film Memories by <i>J. Krait</i> | | 72 |
| Expanding Global Submarine-Cable Network by <i>W. Timmerman, B. M. Dawidziuk, and T. N. M. Hvidsten</i> | | 77 |
| Submerged Repeater for the Commonwealth 160-Circuit Cable by <i>W. J. Archibald, B. M. Dawidziuk, and J. F. Tilly</i> | | 91 |
| Recent Achievements | | 102 |
| United States Patents Issued to International Telephone and Telegraph System; November 1964–January 1965 | | 115 |
| Note | | |
| Book: Les détecteurs de rayonnement infrarouge (Infrared Radiation Detectors) | | 101 |

| Volume 41 | 1966 | Number 2 |
|--|------|----------|
| This Issue in Brief | | 118 |
| Data Communication for Industry and Commerce by <i>Martin Jeppsson</i> | | 121 |
| Three Data-Communication Systems by <i>C.-O. Hendrikson</i> | | 123 |
| Modem Equipments Complying with International Standards by <i>L. O. K. Edvardsson</i> | | 131 |
| Modem Equipment for Parallel Data Transmission by <i>B. Lindström</i> | | 139 |
| Special Measuring Equipments for Data Transmission by <i>B. Lindström</i> | | 149 |
| Error Detection and Correction in Low-Speed Data-Transmission Equipment by <i>H. Sauer</i> | | 154 |
| Dynamic Measurements of Magnetic Thin Films by <i>J. M. Tyszka</i> | | 161 |
| Memory for Test and Evaluation of Magnetic Thin Films by <i>J. M. Tyszka</i> | | 167 |
| Data Transmission—Current Trends and Future Prospects by <i>J. W. Halina</i> | | 177 |
| Instrument Low-Approach System and Radio Altimeter for All-Weather Landings by <i>W. L. Garfield and F. T. Norbury</i> | | 196 |
| World's Telephones—1965 | | 216 |
| United States Patents Issued to International Telephone and Telegraph System; February–April 1965 | | 223 |
| Recent Achievements | | 226 |
| Notes | | |
| ITT Receives Meteorological Award | | 120 |
| Book: Modulation, Noise, and Spectral Analysis | | 215 |
| Book: Mathematik für Elektrotechniker (Mathematics for Electrical Engineers) | | 215 |

This Issue in Brief, p242

Maximum-likelihood smoothing. G Rabow. p245-251.

On the Relation Between Time, Space, and Holding-Time Distribution Functions,
J Kruithof, p252

Planning of Telephone Systems Using Small-Diameter Coaxial Cable,
L Becker and D R Barber, p266

Multichannel Telephone Equipment of Standard Elektrik Lorenz for Small-Diameter Coaxial Cable, F Scheible, p278

Multichannel Telephone Equipment of Standard Telephones and Cables for Small-Diameter Coaxial Cable, R E J Baskett, p298

Multichannel Telephone Equipment of Standard Téléphone et Radio for Small-Diameter Coaxial Cable. P Gfeller, p313

High-power varactor frequency-doubler chains.
H B Wood, D R Hill, V H Knight, R C Baron. p320-340.

Trends in Radio and Television Receiver Components in Germany. J Harmans, p341

Recent Achievements, p350-366

US Patents Issued to ITT System; May 1965 - July 1965, p367-371

Notes:

Goudet Elected President of Société française des Électroniciens et des Radioélectriciens for 1966, p244

McNitt Awarded Marconi Memorial Gold Medal, p244

Pioneer Award to Otto Scheller, p297

Book: Rohren (Electron Tubes), p340

This Issue in Brief, p374

Thin-Film Circuits - A Review, D Boswell and D W Giles, p378

Thick-Film Technology, J A O'Connell and E A Zaratkiewicz. p391

Interconnections for High-density Packaging, K A Matthews and H T Prior, p407

Improving Performance and Functional Flexibility of Thin-Film and Semiconductor Integrated Circuits, C P Sandbank, T M Jackson and A W Horsley, p416

Flip-Chip Semiconductor Devices, P J A McKeown and R D Peacock, p431

Silicon Integrated Circuits, C R Cook, p438

Sandwich-Type Structure Providing Novel Resistor Configurations, G C Riddle, p449

Selecting Digital Integrated Semiconductor Circuits, A Weygang p461

Noise Considerations in Microelectronic Digital Computers, A Richardson, p467

Microelectronics Applied to an Airborne Photo Data Recorder,
L S Squires and J V Payne, p476

Microelectronics Microwave Communication Equipment,
C Greenwald and B Thompson, p491

Integrated Circuits Applied to Pulse-Code Modulation, J V Martens, p502

Recent Achievements, p507

Other Papers from ITT System Authors, p521-523

Notes:

Busignies Elected to National Academy of Engineering, p377

Deloraine Receives First Award in International Communication, p406

Book: Projektierungsunterlagen für Vermittlungssysteme
(Teletraffic Engineering Manual), p415

Book: Communication Switching Systems, p430
