

ANNOUNCEMENTS

Prolactin Family Gordon Research Conference

Holiday Inn Resort

Ventura, CA

Sunday, January 29-Friday, February 3, 2006

Chair: Arthur Gutierrez-Hartmann

Co-Chair: Hallgeir Rui

This is the premier meeting of the PRL and GH community for the past 25 years. At this upcoming 25th Anniversary PRL GRC meeting, key issues in the field will be addressed, such as:

How do PRL and GH receptors bind ligand and signal?

Do PRL and GH receptors traffic to the nucleus?

Are PRL and GH permissive for carcinogenesis?

What is the role of STAT5 in specific tissues?

Which are the molecules that contribute to pituitary tumorigenesis?

Have recent basic discoveries provided any new pituitary tumor treatments?

What are the current advances in pituitary development?

We encourage all interested investigators, and the PRL and GH community in particular, to attend this meeting. The detailed speaker list, seminar titles and full meeting schedule is available at the GRC website (www.grc.org). We also strongly encourage early registration at the GRC website, by December 31, 2005, since space is limited. Travel awards will be provided to selected students and fellows, and up to six (6) abstracts will be selected for platform presentations.
