

## Keyword index

**2D and 3D Stokes flows** – Method of fundamental solutions for multi-dimensional Stokes equations by the dual-potential formulation, 877

**47.20.Ky** – Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602

**47.35+i** – Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602

**92.10.Hm** – Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602

### A

**Absolute/convective** – The role of boundary conditions in the instability of one-dimensional systems, 948

**Accelerations** – Experimental velocities and accelerations in very steep wave events in deep water, 554

**Aeroacoustics** – Attenuation of cavity internal pressure oscillations by shear layer forcing with pulsed micro-jets, 939

**Anisotropy of quantum tangle** – Dynamics of superfluid  $^4\text{He}$ : Two-scale approach, 435

**Arterial flow** – Wave propagation in a fluid flowing through a curved thin-walled elastic tube, 987

**Asymmetric flow** – Basic flow characteristics in three-dimensional branching channel with sudden expansion, 909

**Asymptotic numerical method** – A numerical method for the computation of bifurcation points in fluid mechanics, 234

**Averaged fluid stretch-rate** – Fluid stirrings in a circular cavity with various driven boundaries, 192

### B

**Benjamin–Feir instability** – Extreme waves, modulational instability and second order theory: wave flume experiments on irregular waves, 586

**Bi-harmonic equation** – Method of fundamental solutions for multi-dimensional Stokes equations by the dual-potential formulation, 877

**Bifurcation indicators** – A numerical method for the computation of bifurcation points in fluid mechanics, 234

**Bifurcation of travelling waves** – Periodic wave patterns of two-dimensional Boussinesq systems, 393

**Bimodal spectrum** – Wave statistics in unimodal and bimodal seas from a second-order model, 649

**Binary gas mixture** – A Legendre expansion and some exact solutions basic to the McCormack model for binary gas mixtures, 130

**Bioconvection** – The onset of thermobioconvection in a shallow fluid saturated porous layer heated from below in a suspension of oxytactic microorganisms, 223

**Boundary layer** – Algebraic growth in a Blasius boundary layer: Nonlinear optimal disturbances, 1 – Evolution of a model dune in a shear flow, 348

**Boundary-layer flow** – On two-dimensional linear waves in Blasius

boundary layer over viscoelastic layers, 33

**Boundary perturbation** – Stable, high-order computation of traveling water waves in three dimensions, 406

**Boussinesq equations** – Higher-order Boussinesq equations for two-way propagation of shallow water waves, 1008

**Boussinesq model** – Nonlinear wave amplification in front of reflective structures, 565

**Boussinesq systems** – Periodic wave patterns of two-dimensional Boussinesq systems, 393

**Branch flow rate** – Basic flow characteristics in three-dimensional branching channel with sudden expansion, 909

**Bubble generation** – Injection and coalescence of bubbles in a quiescent inviscid liquid, 164

**Buoyancy** – An experimental study of the bulk properties of vortex rings translating through a stratified fluid, 302

### C

**Camille wave** – Experimental velocities and accelerations in very steep wave events in deep water, 554

**Capillary-gravity waves** – Stable, high-order computation of traveling water waves in three dimensions, 406

**Cavity** – Attenuation of cavity internal pressure oscillations by shear layer forcing with pulsed micro-jets, 939

**Centrifugal instability** – A criterion for detection of the onset of Dean instability in Newtonian fluids, 505

**Cercignani–Lampis kernel** – Surface effects in rarefied gas dynamics: an analysis based on the Cercignani–Lampis boundary condition, 113

**Circular cavity** – Fluid stirrings in a circular cavity with various driven boundaries, 192

**Classical solution** – On existence and uniqueness of classical solutions to Euler equations in a rotating cylinder, 267

**Coalescence** – Injection and coalescence of bubbles in a quiescent inviscid liquid, 164

**Compliant walls** – On two-dimensional linear waves in Blasius boundary layer over viscoelastic layers, 33

**Conditional sampling** – A conditional sampling method based on fuzzy clustering for the analysis of large-scale dynamics in turbulent flows, 172

**Control** – Attenuation of cavity internal pressure oscillations by shear layer forcing with pulsed micro-jets, 939

**Couette flow** – The convective stability of circular Couette flow induced by a linearly accelerated inner cylinder, 74 – The Couette flow of dense and fluid-saturated granular media, 960

**Curved channel** – A criterion for detection of the onset of Dean instability in Newtonian fluids, 505

**Curved elastic tubes** – Wave propagation in a fluid flowing through a curved thin-walled elastic tube, 987

## D

**Dean instability** – A criterion for detection of the onset of Dean instability in Newtonian fluids, 505

**Direct numerical simulation** – Separation control at hydrofoils using Lorentz forces, 137

**Directional distribution** – Wave statistics in unimodal and bimodal seas from a second-order model, 649

**Discrete-ordinates method** – Surface effects in rarefied gas dynamics: an

analysis based on the Cercignani–Lampis boundary condition, 113

**Distribution function** – Numerical modeling of the KdV random wave field, 425

**Draupner wave** – Experimental velocities and accelerations in very steep wave events in deep water, 554

**Dual-potential formulation** – Method of fundamental solutions for multi-dimensional Stokes equations by the dual-potential formulation, 877

**Dynamical systems** – Dynamical system based optimal control of incompressible fluids. Boundary control, 153

**Dynamics of  $^4\text{He}$**  – Dynamics of superfluid  $^4\text{He}$ : Two-scale approach, 435

**Dynamo experiments** – Ambivalent effects of added layers on steady kinematic dynamos in cylindrical geometry: application to the VKS experiment, 894

## E

**EDL** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491

**Electrical excitation** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491

**Electrically-insulating solids** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491

**Electromagnetic flow control** – Separation control at hydrofoils using Lorentz forces, 137

**Electroosmosis** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491

**Erosion sedimentation** – Evolution of a model dune in a shear flow, 348

**Euler equations** – On existence and uniqueness of classical solutions to Euler equations in a rotating cylinder, 267

**Experimental freak waves** – Experimental velocities and accelerations in very steep wave events in deep water, 554

**Experimental study** – A criterion for detection of the onset of Dean instability in Newtonian fluids, 505

**Extreme waves** – Weakly two-dimensional interaction of solitons in shallow water, 636

## F

**FEM** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491

**Finite water depth** – Wave statistics in unimodal and bimodal seas from a second-order model, 649

**Flexibility** – Optimization of the rod chain model to simulate the motions of a long flexible fiber in simple shear flows, 337

**Flow characteristic** – Basic flow characteristics in three-dimensional branching channel with sudden expansion, 909

**Flow separation** – The effect of an insoluble surfactant on the skin friction of a bubble, 59

**Fluid stirring** – Fluid stirrings in a circular cavity with various driven boundaries, 192

**Forces** – Hydrodynamic forces acting on a rigid fixed sphere in early transitional regimes, 321

**Freak wave** – Three reasons for freak wave generation in the non-uniform current, 574 – Freak waves as nonlinear stage of Stokes wave modulation instability, 677

**Freak waves** – Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602 – Nonlinear analysis and simulations of measured freak wave time series, 621 – Freak waves under the action of wind: experiments and simulations, 662

**Free surface** – Freak waves as nonlinear stage of Stokes wave modulation instability, 677

**Free-surface problem** – The effect of an insoluble surfactant on the skin friction of a bubble, 59

**Fuzzy clustering** – A conditional sampling method based on fuzzy clustering for the analysis of large-scale dynamics in turbulent flows, 172

## G

- Geometry variations** – Investigation of the impact of the geometry on the nose flow, 471
- Gravitational instability** – Transient growth in linearly stable gravity-driven flow in porous media, 83
- Ground effects** – Underbody and ground effects on rotating disc flow: a global scale inviscid study, 923

## H

- High-order methods** – Stable, high-order computation of traveling water waves in three dimensions, 406
- Homoclinic orbits** – Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602
- Hopf bifurcation** – A numerical method for the computation of bifurcation points in fluid mechanics, 234
- Hydrodynamic instability** – The convective stability of circular Couette flow induced by a linearly accelerated inner cylinder, 74
- Hydrodynamic stability** – A criterion for detection of the onset of Dean instability in Newtonian fluids, 505

## I

- Ideal fluids** – Stable, high-order computation of traveling water waves in three dimensions, 406
- Incompressible flow** – Dynamical system based optimal control of incompressible fluids. Boundary control, 153
- Instabilities** – On two-dimensional linear waves in Blasius boundary layer over viscoelastic layers, 33 – Hydrodynamic forces acting on a rigid fixed sphere in early transitional regimes, 321
- Integral equations** – Ambivalent effects of added layers on steady kinematic dynamos in cylindrical geometry: application to the VKS experiment, 894
- Interface tracking** – The effect of an insoluble surfactant on the skin friction of a bubble, 59
- Intermediate asymptotics** – Self-similar gravity currents in porous

media: Linear stability of the Barenblatt–Pattle solution revisited, 360

**Inverse scattering transform** – Non-linear analysis and simulations of measured freak wave time series, 621

**Inviscid** – Underbody and ground effects on rotating disc flow: a global scale inviscid study, 923

**Ionic liquids** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491

## J

- Jeffreys' sheltering mechanism** – Freak waves under the action of wind: experiments and simulations, 662
- Jets** – Upstream nozzle shaping effects on near field flow in round turbulent free jets, 279

## K

- Kadomtsev–Petviashvili equation** – Weakly two-dimensional interaction of solitons in shallow water, 636
- KdV equation** – Numerical modeling of the KdV random wave field, 425
- Kinetic equations** – Surface effects in rarefied gas dynamics: an analysis based on the Cercignani–Lampis boundary condition, 113

## L

- Laminar-turbulent transition** – Experiments on the linear instability of flow in a wavy channel, 971
- Langmuir state equation** – The effect of an insoluble surfactant on the skin friction of a bubble, 59
- Laplace equation** – Method of fundamental solutions for multidimensional Stokes equations by the dual-potential formulation, 877
- Linear acceleration** – The convective stability of circular Couette flow induced by a linearly accelerated inner cylinder, 74
- Linear stability analysis** – Transient growth in linearly stable gravity-driven flow in porous media, 83

– Self-similar gravity currents in porous media: Linear stability of the Barenblatt–Pattle solution revisited, 360

**Local/global instabilities** – The role of boundary conditions in the instability of one-dimensional systems, 948

**Long fiber** – Optimization of the rod chain model to simulate the motions of a long flexible fiber in simple shear flows, 337

## M

- Magnetic field** – Ambivalent effects of added layers on steady kinematic dynamos in cylindrical geometry: application to the VKS experiment, 894
- Marangoni effect** – The effect of an insoluble surfactant on the skin friction of a bubble, 59
- Matched asymptotic solution** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491
- McCormack model** – A Legendre expansion and some exact solutions basic to the McCormack model for binary gas mixtures, 130
- Method of fundamental solutions** – Method of fundamental solutions for multidimensional Stokes equations by the dual-potential formulation, 877
- Microchannel** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491
- Microflow** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491
- Micromixer** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491
- Mixing** – Upstream nozzle shaping effects on near field flow in round turbulent free jets, 279
- Modulation instability** – Freak waves as nonlinear stage of Stokes wave modulation instability, 677
- Modulational instability** – Extreme waves, modulational instability and second order theory: wave flume experiments on irregular waves, 586 –

Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602

**Moving mesh method** – The effect of an insoluble surfactant on the skin friction of a bubble, 59

**Multiply connected** – Analytical solutions for uniform potential flow past multiple cylinders, 459

## N

**Nasal cavity flow** – Investigation of the impact of the geometry on the nose flow, 471

**Non-linear waves** – Three reasons for freak wave generation in the non-uniform current, 574

**Non-uniform current** – Three reasons for freak wave generation in the non-uniform current, 574

**Nonlinear** – Algebraic growth in a Blasius boundary layer: Nonlinear optimal disturbances, 1

**Nonlinear focusing** – Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602

**Nonlinear Schrödinger equation** – Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602

**Nonlinear waves** – Nonlinear wave amplification in front of reflective structures, 565 – Extreme waves, modulational instability and second order theory: wave flume experiments on irregular waves, 586 – Wave statistics in unimodal and bimodal seas from a second-order model, 649

**Nozzles** – Upstream nozzle shaping effects on near field flow in round turbulent free jets, 279

**Numerical and experimental investigation** – Investigation of the impact of the geometry on the nose flow, 471

**Numerical methods** – Wave propagation in a fluid flowing through a curved thin-walled elastic tube, 987

**Numerical simulation** – Optimization of the rod chain model to simulate the motions of a long flexible fiber in simple shear flows, 337 – Numerical simulation of unsteady blade row interactions induced by passing wakes,

379 – Stable, high-order computation of traveling water waves in three dimensions, 406

**Numerical study** – A criterion for detection of the onset of Dean instability in Newtonian fluids, 505

## O

**Oblique waves** – Nonlinear wave amplification in front of reflective structures, 565

**Obstacles** – Analytical solutions for uniform potential flow past multiple cylinders, 459

**Optimal control** – Dynamical system based optimal control of incompressible fluids. Boundary control, 153

**Optimal perturbation** – Algebraic growth in a Blasius boundary layer: Nonlinear optimal disturbances, 1

**Oxytactic microorganisms** – The onset of thermo-bioconvection in a shallow fluid saturated porous layer heated from below in a suspension of oxytactic microorganisms, 223

## P

**Periodic two-dimensional pattern** – Periodic wave patterns of two-dimensional Boussinesq systems, 393

**Perturbation analysis** – Higher-order Boussinesq equations for two-way propagation of shallow water waves, 1008

**Perturbation methods** – Wave propagation in a fluid flowing through a curved thin-walled elastic tube, 987

**PIV** – Experimental velocities and accelerations in very steep wave events in deep water, 554

**Plane channel flow** – Experiments on the linear instability of flow in a wavy channel, 971

**Porous media** – The onset of thermo-bioconvection in a shallow fluid saturated porous layer heated from below in a suspension of oxytactic microorganisms, 223

**Porous media flow** – Transient growth in linearly stable gravity-driven flow in porous media, 83

**Porous medium equation** – Self-similar gravity currents in porous media: Linear stability of the Barenblatt–Pattle solution revisited, 360

**Potential flow** – Injection and coalescence of bubbles in a quiescent inviscid liquid, 164

**Propagation theory** – The convective stability of circular Couette flow induced by a linearly accelerated inner cylinder, 74

## Q

**Quantum turbulence** – Dynamics of superfluid  $^4\text{He}$ : Two-scale approach, 435

## R

**Random waves** – Numerical modeling of the KdV random wave field, 425

**Rarefied gas dynamics** – Surface effects in rarefied gas dynamics: an analysis based on the Cercignani–Lampis boundary condition, 113 – A Legendre expansion and some exact solutions basic to the McCormack model for binary gas mixtures, 130

**Reynolds stress turbulence model** – Observations on the predictions of fully developed rotating pipe flow using differential and explicit algebraic Reynolds stress models, 95

**Rheology** – The Couette flow of dense and fluid-saturated granular media, 960

**Ring** – An experimental study of the bulk properties of vortex rings translating through a stratified fluid, 302

**Rod-chain** – Optimization of the rod chain model to simulate the motions of a long flexible fiber in simple shear flows, 337

**Rogue waves** – Experimental velocities and accelerations in very steep wave events in deep water, 554 – Melnikov analysis and inverse spectral analysis of rogue waves in deep water, 602

**Rotating disc** – Underbody and ground effects on rotating disc flow: a global scale inviscid study, 923

**Rotating fluids** – On existence and uniqueness of classical solutions to

- Euler equations in a rotating cylinder, 267
- Rotating pipe flow** – Observations on the predictions of fully developed rotating pipe flow using differential and explicit algebraic Reynolds stress models, 95
- Rotating turbulence** – Dynamics of superfluid  $^4\text{He}$ : Two-scale approach, 435
- Rotor–stator interaction** – Numerical simulation of unsteady blade row interactions induced by passing wakes, 379
- Roughness effects** – Experiments on the linear instability of flow in a wavy channel, 971

## S

- Second order theory** – Extreme waves, modulational instability and second order theory: wave flume experiments on irregular waves, 586
- Second-order surface wave model** – Wave statistics in unimodal and bimodal seas from a second-order model, 649
- Secondary flow** – Electrically-excited (electroosmotic) flows in microchannels for mixing applications, 491 – A criterion for detection of the onset of Dean instability in Newtonian fluids, 505
- Self-similar solution** – Self-similar gravity currents in porous media: Linear stability of the Barenblatt–Pattle solution revisited, 360
- Separation control** – Separation control at hydrofoils using Lorentz forces, 137
- Shallow water waves** – Weakly two-dimensional interaction of solitons in shallow water, 636 – Higher-order Boussinesq equations for two-way propagation of shallow water waves, 1008
- Shallow-water approximation** – Self-similar gravity currents in porous media: Linear stability of the Barenblatt–Pattle solution revisited, 360
- Shear layer** – Attenuation of cavity internal pressure oscillations by shear layer forcing with pulsed micro-jets, 939

- Skin friction** – The effect of an insoluble surfactant on the skin friction of a bubble, 59
- Solitary wave** – Free surface waves in equilibrium with a vortex, 255
- Solitary waves** – Higher-order Boussinesq equations for two-way propagation of shallow water waves, 1008
- Soliton interaction** – Weakly two-dimensional interaction of solitons in shallow water, 636
- Spectral methods** – Stable, high-order computation of traveling water waves in three dimensions, 406
- Spectral solution** – Nonlinear wave amplification in front of reflective structures, 565
- Spectrum** – Numerical modeling of the KdV random wave field, 425
- Sphere** – Hydrodynamic forces acting on a rigid fixed sphere in early transitional regimes, 321
- Stability** – Algebraic growth in a Blasius boundary layer: Nonlinear optimal disturbances, 1 – The onset of thermo-bioconvection in a shallow fluid saturated porous layer heated from below in a suspension of oxytactic microorganisms, 223
- Steady and laminar flow field** – Investigation of the impact of the geometry on the nose flow, 471
- Stokes flow** – Fluid stirrings in a circular cavity with various driven boundaries, 192

- Stratified** – An experimental study of the bulk properties of vortex rings translating through a stratified fluid, 302
- Surface wave analysis** – Nonlinear analysis and simulations of measured freak wave time series, 621
- Surfactant** – The effect of an insoluble surfactant on the skin friction of a bubble, 59
- Swirling flow** – Observations on the predictions of fully developed rotating pipe flow using differential and explicit algebraic Reynolds stress models, 95

## T

- Taylor–Görtler vortex** – The convective stability of circular Couette flow induced by a linearly accelerated inner cylinder, 74

- Three-components flows** – On existence and uniqueness of classical solutions to Euler equations in a rotating cylinder, 267
- Three-dimensional cylindrical branching channel** – Basic flow characteristics in three-dimensional branching channel with sudden expansion, 909
- Transient growth** – Algebraic growth in a Blasius boundary layer: Nonlinear optimal disturbances, 1 – Transient growth in linearly stable gravity-driven flow in porous media, 83
- Traveling waves** – Stable, high-order computation of traveling water waves in three dimensions, 406
- Turbulence** – Upstream nozzle shaping effects on near field flow in round turbulent free jets, 279
- Turbulent flow** – A conditional sampling method based on fuzzy clustering for the analysis of large-scale dynamics in turbulent flows, 172
- Two-dimensional** – On existence and uniqueness of classical solutions to Euler equations in a rotating cylinder, 267
- Two-way wave propagation** – Higher-order Boussinesq equations for two-way propagation of shallow water waves, 1008

## U

- Underbody** – Underbody and ground effects on rotating disc flow: a global scale inviscid study, 923
- Uniform potential flow** – Analytical solutions for uniform potential flow past multiple cylinders, 459

## V

- Velocities** – Experimental velocities and accelerations in very steep wave events in deep water, 554
- Velocity potential and stream function vector** – Method of fundamental solutions for multidimensional Stokes equations by the dual-potential formulation, 877
- Velocity scale** – Experimental velocities and accelerations in very steep wave events in deep water, 554

**Viscoelastic layer** – On two-dimensional linear waves in Blasius boundary layer over viscoelastic layers, 33

**Vortex** – Free surface waves in equilibrium with a vortex, 255 – An experimental study of the bulk properties of vortex rings translating through a stratified fluid, 302

## W

**Wake** – Hydrodynamic forces acting on a rigid fixed sphere in early tran-

sitional regimes, 321 – Numerical simulation of unsteady blade row interactions induced by passing wakes, 379

**Water waves** – Periodic wave patterns of two-dimensional Boussinesq systems, 393

**Wave reflections** – The role of boundary conditions in the instability of one-dimensional systems, 948

**Wave statistics** – Wave statistics in unimodal and bimodal seas from a second-order model, 649

**Wave–structure interactions** – Non-linear wave amplification in front of reflective structures, 565

**Wave-current interaction** – Three reasons for freak wave generation in the non-uniform current, 574

**Wet granular systems** – The Couette flow of dense and fluid-saturated granular media, 960

**Wind interaction** – Freak waves under the action of wind: experiments and simulations, 662
