$\alpha,\beta$ -MeATP augments the UTP contraction of rabbit basilar artery  
Yasushi Miyagi, Nitoshi Kimura, Robin C. Carpenter, Andrew D. Parent,  
John Zhang [Eur. J. Pharmacol. 488 (2004) 117–125]<sup>☆</sup>

The Publisher received the following letter from the authors of the above-mentioned article.

I recently discovered that a paper I have submitted for publication in your journal, “ $\alpha,\beta$ -MeATP augments the UTP contraction of rabbit basilar artery,” was published by a former colleague at the same time I was submitting my paper to you. There was a miscommunication regarding the paper several years ago, and I apologize for unknowingly submitting a work that has already been published in the American Journal of Physiology: Heart and Circulatory Physiology (2004) 286, H1546–H1551. We have decided to request the withdrawal of our paper from publication in the European Journal of Pharmacology.

E-mail address: [suitecello2003@yahoo.co.jp](mailto:suitecello2003@yahoo.co.jp)

Since the above means that the article as published in Volume 488 of the European Journal of Pharmacology is also published in the American Journal of Physiology: Heart and Circulatory Physiology, we herewith confirm that it should be considered withdrawn.

The Publisher,  
European Journal of Pharmacology
