P.Roepstorff, K.Norris, S.Severinsen, K.Brunfeldt, Mass spectrometric analysis of methionine as sulfoxide during permethylation, FEBS Letters 9 (1970) 235–238.

p. 235, right hand side, second paragraph.
The first 2 lines should read:

Typical experimental conditions for the oxidation-permethylation-reduction are as follows: III (0.8 mg,

p. 235, foot note should read:
Abbreviation: Boc: *t*-butyloxycarbonyl.

P.Dehm, A.Nordwig, Influence of serum albumin on the activity of a microsomal aminopeptidase, FEBS Letters 9 (1970) 225–228.

p. 225, Results section.
The first 3 lines should read:

Fig. 1. shows how the enzymic activity increases with increasing activity of maganese ions. This property of X-prolyl-aminopeptidase is shared with other kidney peptidases,...
