

Corrigendum

Corrigendum to: pH-Dependent channel activity of heterologously-expressed main intrinsic protein (MIP) from rat lens (FEBS 25772)*[FEBS Letters 512 (2002) 199–204][☆]*

In the original article an initial (C.) was left out of the name of the fourth author. Figs. 1–3 show cells patch-clamped with alternating voltage pulses of ± 40 mV for 1 s every 4 s, rather than with alternating current. Data were digitised using a CED 1401 plus (Cambridge Electronic design, Cambridge,

UK) rather than through a HAMEG digital scope. Lowering the external pH from 7 to 6.3 resulted in an increase in current from 0.02 (rather than 0) to 0.35 nA in sf21 cells infected with AcMIPN.
