

Errata and Corrigenda

The publishers and the authors would like to make the following corrections:

Labeit, S., Gibson, T., Lakey, A., Leonard, K., Zeviani, M., Knight, P., Wardale, J. and Trinick, J., Evidence that nebulin is a protein-ruler in muscle thin filaments (1991) FEBS Letters 282, 313–316

The final paragraph of the text and the legend to Fig. 4 (both on page 315) both concern data from three species, but the order in which these are given is incorrect. The correct order should read:

'chicken, rabbit and beef' in the final paragraph;

'chicken (pectoralis major), rabbit (psoas) and beef (psoas)' in Fig. 4 legend.

Yoshioka, K., Kanda, H., Kondo, S., Togashi, S., Miyake, T. and Shiba, T., Autoprocessing of *Drosophila copia* gag precursor to generate a unique laminate structure in *Escherichia coli* (1991) FEBS Letters 285, 31–34.

The name of the second author was spelled incorrectly. The second author's name is '**Hiromi Kanda**', not '**Hiroma Kanda**'.

Guzmán, M., and Castro, J., Okadaic acid stimulates carnitine palmitoyltransferase I activity and palmitate oxidation in isolated rat hepatocytes (1991) FEBS Letters 291, 105–108

The first sentence of the ABSTRACT to the above paper was incorrect. The sentence should have read:

'Okadaic acid parallelly increased carnitine palmitoyltransferase I activity and the rate of palmitate oxidation in isolated rat hepatocytes.'

instead of:

'Okadaic acid increased in parallel with carnitine palmitoyltransferase I activity and the rate of palmitate oxidation in isolated rat hepatocytes.'

Anborgh, P.H., Swart, G.W.M. and Parmeggiani, A., Kirromycin-induced modifications facilitate the separation of EF-Tu species and reveal intermolecular interactions (1991) FEBS Letters 292, 232–236

The first sentence of the ABSTRACT should have read:

'A simplified method for the separation of a kirromycin-sensitive *tufB*-encoded elongation factor Tu (EF-TuBs) from a kirromycin-resistant *tufA* product (EF-TuAr) was obtained by exploiting the specific increase of negative charges induced by the antibiotic, resulting in a retarded elution of kirromycin-bound EF-TuBs on ionic chromatography.'

instead of:

'A simplified method for the separation of a kirromycin-sensitive *tufB*-encoded elongation factor Tu (EF-TuBs) from a kirromycin-resistant *tufA* product (EF-TuAr) was obtained by exploiting the specific increase of *positive* charges induced by the antibiotic, resulting in a retarded elution of kirromycin-bound EF-TuBs on ionic chromatography.'

On page 233, the first sentence of the RESULTS, section 3.1. should have read:

'Recently, we have observed that kirromycin strongly modifies the electrophoresis behaviour of EF-Tu, increasing the negative charge as compared to the wild-type [20].'

instead of:

'Recently, we have observed that kirromycin strongly modifies the electrophoresis behaviour of EF-Tu, increasing the *positive* charge as compared to the wild-type [20].'

Sugumaran, M., Molecular mechanisms for mammalian melanogenesis. Comparison with insect sclerotization (1991) FEBS Letters 293, 4–10

As the result of a typesetting error, the right-hand column of page 4 was incomplete. The MINIREVIEW is reprinted in full on the next seven pages.
