

FOOD CHEMISTRY

The chemical and biochemical composition of foods is fundamental to the study of their properties and processing applications. *Food Chemistry* publishes original peer-reviewed research papers dealing with a wide range of subjects which are essential to the food scientist and technologist.

Topics include:

- the chemical analysis of food;
- chemical additives and toxins;
- chemistry relating to the microbiological, sensory, nutritional and physiological aspects of food;
- structural changes in molecules during the processing and storage of foods;
- direct effects on foods of the use of agrochemicals;
- chemical quality in food engineering and technology.

Additionally the journal features analytical papers concerned with micronutrients, macronutrients and other chemical constituents of foods, including contaminants. The journal contains a discrete analytical section for papers whose main ethos is methodological and such papers should be concerned with methods, their development and evaluation and results of collaborative trials. Nutritional, physiological and clinical methods will be considered if they relate to dietary chemistry. All papers for the journal will be concerned with chemical aspects of food at any point in the food chain.

Managing Editor

DR G. G. BIRCH

Department of Food Science and Technology, University of Reading, Whiteknights, PO Box 226, Reading RG6 2AP, UK

Editor (Analytical Methods Section)

DR R. MACRAE

Department of Chemistry, The University, Hull HU6 7RX, UK

Editor (North America)

DR J. I. GRAY

Department of Food Science and Human Nutrition, Michigan State University, East Lansing, Michigan 48824-1224, USA

Editor

DR J. P. ROOZEN

Department of Food Science, Wageningen Agricultural University, Bomenweg 2, PO Box 8129, 6700 EV Wageningen, The Netherlands
