

Corrigendum

The Publisher and authors would like to draw attention to an error in the following article:

Ghio AJ, Ford ES, Kennedy TP, Hoidal JR. The association between serum ferritin and uric acid in humans. *Free Radic Res* 2005;39:337–342.

The regression coefficient for the total sample in Table II should be 0.0679. In addition, the authors

wish to clarify that all R^2 listed in Tables II–V represent the model R^2 from all variables in the models, not just ferritin. The conclusion that concentrations of ferritin are significantly and positively associated with concentrations of uric acid remains unchanged.
