

POSITION AVAILABLE

The following extract is from a letter received from J.A. Alhadeff:

I recently received a two year grant to study the clinical and oncological significance of variant β -hexosaminidase and sialic acid (lipid-associated and total) as biochemical markers of malignancy. This grant includes support (\$18 000/yr) for a postdoctoral fellow to help carry out the research. I am enlisting your help in locating a postdoctoral fellow experienced in protein chemistry/enzymology and/or carbohydrate chemistry to work on the project.

The position is available from October 1, 1986. Potential candidates should write directly to me and include a copy of their resumé. Lehigh University is located in Bethlehem in the Lehigh Valley of Eastern Pennsylvania. The relatively low cost and high quality of living in our area and the proximity to many major metropolitan centers (e.g., Philadelphia, New York, Washington, D.C., Boston) makes Bethlehem a great place to live.

Jack A. Alhadeff, Ph.D.
Professor of Biochemistry
Department of Chemistry
