

Energy & Environmental Science

Time is running out fast!

Don't miss out on the last months of *Energy & Environmental Science's* free access period which expires at the end of this year.

We know from experience that you like to test-drive new journals so you can fully evaluate them. That's why readers have been enjoying free online access to the latest issue of the journal since its launch in 2008. In addition, we've made all previous 2008 and 2009 online issue content freely available to institutions, following a simple registration process.

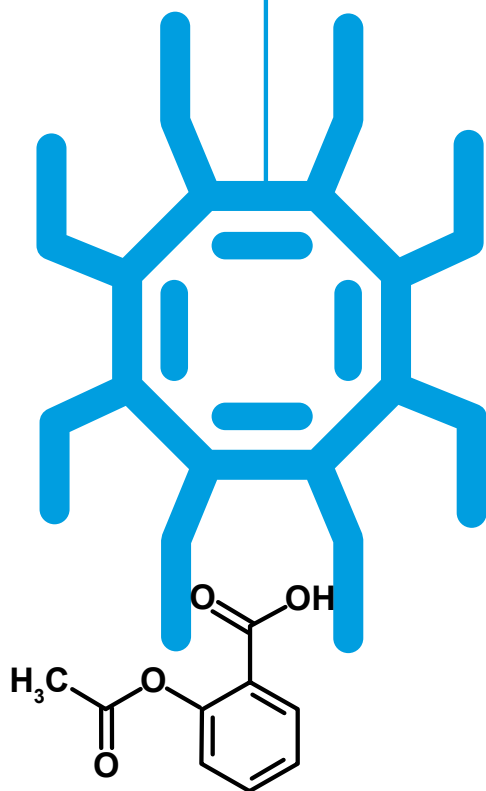

Make sure you are not missing out on the very best of the chemical sciences relating to energy conversion and storage, alternative fuel technologies and environmental science.

Register now to make the most of the remaining free access period until the end of this year, before *Energy & Environmental Science* becomes a subscription journal in January 2010.

Register now at www.rsc.org/ees_registration

New adventures on the web

ChemSpider is a free online, structure centric community for chemists, providing fast access to millions of unique chemical entities, resources and information and the opportunity to collaborate with a world wide community of scientists. Rapidly becoming the richest single source of structure based chemistry information online, ChemSpider is a ground breaking initiative now supported by the RSC, the most innovative of chemical societies.
