'New methods for the synthesis of organic compounds and improvements of known methods are being recorded continuously in this classic reference ...

It is inconceivable that any library that serves the needs of organic chemists can be without this most valuable reference source.'

Journal of Medical Chemistry

The current volume consists primarily of papers published between 1977 and 1979. New references to material in the preceding volumes have again been included in the text. The index covers this volume only. A cumulative index and classified arrangement of all titles in volumes 31 through 35 will be published in the next volume, which will include the seventh series.
