Member of the European Organization for Research and Treatment of Cancer (E.O.R.T.C.)

Member of the board of editors of various international scientific journals.

PRINCIPAL AREAS OF SCIENTIFIC INTEREST

Pierre POTIER

Chemistry, biology and pharmacology of naturally occurring substances;
(nearly 400 articles in international, peer-reviewed journals)

ACTIVITY IN ORGANIC CHEMISTRY : discovery of new reactions, synthesis of complex compounds ; structural analysis of naturally occurring substances.

CONTRIBUTION TO MEDICINAL CHEMISTRY : discovery of two antitumor drugs :

- Navelbine, developed worldwide by Pierre FABRE Laboratories ;
- Taxotère, also developed worldwide by Rhône-Poulenc Rorer (Aventis).

Principal therapeutic targets of these two products : solid (and circulating) tumors, especially those resistant to other drugs.

Research in type II diabetes (N.I.D.D.).

In general : **Research at the interface of chemistry and biology.**
