

Additions and Corrections

1997, Volume 36

Volkmar Stenzel, Jörg Jeske, Wolf-Walther du Mont,* and Peter G. Jones: Supramolecular Soft–Soft Interactions of Diiodo(*tert*-butyl)(isopropyl)phosphonium Cations with μ_2 - to μ_5 -Bridging Iodide Anions. Formation of Chains, Helices, and Columnar Structures.

Page 444. The representation of RPI_4 compounds in Scheme 1 is incorrect: From two of the three iodine atoms adjacent to phosphorus, *two* contacts to adjacent RPI_4 moieties did appear, not *one* (as correctly stated in the text (p 443): “iodine counterions have to bridge three RPI_3^+ cations”). The correct representation is as follows:

IC970249Q
