

Additions and Corrections

1991, Volume 30

W. Gregory Jackson: The Use of ^{13}C NMR Isotopomer Distributions for Following Proton Exchange and Unambiguously Assigning the Carbons and Coordinated Amine Protons in Multidentate Chelate Complexes of Cobalt(III).

Page 1571, right column, second sentence. The order of proton exchange rates has been inadvertently reversed; the sentence should read "In D_2O , the lowest field NH signal was the second to disappear, marginally slower than one (and only one) of the signals comprising the accidental degeneracy." This small error has led to a more crucial one, namely the reversing of assignments for protons a and c at the top of Figure 6, page 1573. Fortunately this error has not been propagated in the text, and so none of the arguments are affected.

1993, Volume 32

Patricia M. Angus, David P. Fairlie, and W. Gregory Jackson*: Synthesis, Solution Structure, and Reactivity of Oxygen-Bound Amides on Cobalt(III).

Pages 450 and 451. The reference numbers in the text have been inadvertently scrambled down to and including the figure on the second page of this 10-page article. For just that section, replace the first reference number by the second in the following list to remedy the problem: 13, 1; 10, 2; 14, 3; 8, 4; 9, 5; 12, 6; 20, 7; 15, 8; 17, 9; 18, 10; 19, 11; 21, 12; 22, 13; 23, 14; 24, 15. The actual references are correct.
