Manuscript Submission on Disk

The Journals Department of the American Chemical Society is accepting manuscripts received on disk for the production of ACS journals. Documents prepared with either WordPerfect or Microsoft Word can be translated to the format used for production. We are interested in receiving documents prepared with other word-processing packages on an experimental basis in order that we may continue to develop the programs needed for their translation. However, the use of these files in production cannot be guaranteed at this time.

Four hardcopy versions of the manuscript are required for review. The disk should accompany the final (accepted) version of your manuscript. The version on the disk **MUST EXACTLY MATCH** the final hardcopy version of the accepted manuscript.

While you are preparing your manuscript, use the document mode or its equivalent in your word-processing program. Do not include any page-formatting instructions in the file. The text should be unjustified. Do not insert spaces before punctuation. Incorrectly formatted references may require more effort than rekeying. Please check a recent journal issue for the correct reference formats. Ensure that all characters are correctly represented throughout the manuscript: for example, 1 (one) and l (ell), 0 (zero) and O (oh), x (ex) and × (times sign). Carefully check your final copy for consistent notation and correct spelling. Our conversion program will faithfully translate any errors to the typeset copy. Check your disk with a virus detection program. Disks containing viruses will not be processed. Label the disk with the manuscript number and first author name. Provide the name and version of the software used, the platform used, and file names on the diskette description form.

All of the text and tabular material (if available) should be in one file, with the complete text first, followed by the tabular material. Do not integrate ANY graphic material into this file. If graphics are available, they should be in a separate file. If tabular material is present, the column alignment should have been obtained with either tabs or spaces, but not a mixture of both.
