Additions and Corrections

1994, Volume 33

Jianwei Ho, Tricia L. Breen, Andrzej Ozarowski, and Douglas W. Stephan*: Early Metal Mediated P−P Bond Formation in $Cp_2M((PR)_2)$ and $Cp_2M((PR)_3)$ Complexes.

Pages 865−870. Full details of the crystallographic study of $Cp_2Zr(PPh)_3$ (**1**) and $Cp_2Zr(PCy)_3$ (**2**), respectively, were previously reported: Hey-Hawkins, E.; et al. *Z. Naturforsch.* **1988**, *43B*, 1271; *Z. Anorg. Allg. Chem.* **1992**, *615*, 35.

IC951921R

Thomas F. Fässler* and Markus Hunziker: Ge_9^{3-} and Pb_9^{3-}: Two Novel, Naked, Homopolyatomic Zintl Ions with Paramagnetic Properties.

Page 5380. It has been brought to our attention that an isolated Ge_9^{3-} anion had been previously found in (2,2,2-crypt-$K^+)_3[P(C_6H_5)_3Ge_9^{3-}]$. The paramagnetic property and the crystal structure were reported in: Belin, C.; Mercier, H.; Angilella, V. *New J. Chem.* **1991**, *15*, 931. Angilella, V.; Belin, C. *J. Chem. Soc., Faraday Trans.* **1991**, *87*, 203. The structural similarities of the two compounds indicate that the distortions of the Ge_9^{3-} anions may not be due to electrostatic interactions or crystal packing, as anticipated before.
