**Yan Xu,\* Liying Cheng, and Wansheng You:** Hydrothermal Synthesis and Structural Characterizations of Two New Germanates with a Novel Topological Framework and Unusual  $\text{Ge}_4(\text{OH})_4$  Cubane

Page 7705. The similar topological germanates,<sup>1–5</sup> germanophosphates,<sup>6</sup> titanisilicates,<sup>7–9</sup> and borates<sup>10</sup> have been synthesized by using  $\text{NH}_4^+$ ,  $\text{Li}^+$ ,  $\text{K}^+$ ,  $\text{Rb}^+$ , and  $\text{Cs}^+$  cations as charge compensation agents. In this paper, we reported the organic-templated germanates but with the same topological natural framework. In the original paper, the above references were omitted. The additional references are as follows:
