

Forthcoming Meeting

11th 'Journées des Actinides'

Jesolo-Lido (Venice, Italy) May 25, 26, 1981.

The 'Journées des Actinides' will have, as usual, a character of informality. The most recent advances in chemistry, physical chemistry and solid state physics of the actinide metals and compounds will be the main subjects. Completed works or news of works just being performed will be welcomed. Further information can be obtained from:

Professor GABRIELLA BOMBIERI,
Istituto di Chimica e Tecnologia dei
Radioelementi del C.N.R.,
Corso Stati Uniti,
35100 Padua, Italy

Errata

Inorganica Chimica Acta, 42 (1980) 217–222

Antimony(III) and Bismuth(III) Complexes of 2,5-Dimethyl- and 2-Amino-5-methyl-1,3,4-thiadiazole

A. C. FABRETTI, G. C. FRANCHINI and G. PEYRONEL

In the title of the above article, on p. 217, the ligand 2,5-Dimethyl was erroneously published as 2,6-Dimethyl.

Inorganica Chimica Acta, 43 (1980) 205–210

Structure and Redox Properties of some Planar $[M^{II}N_4]$ Chelate Compounds of Cobalt and Nickel. Part IV. Crystal and Molecular Structure of 1,2-bis(2-imino-benzylideneimino)propanenickel(II)

N. A. BAILEY and E. D. MCKENZIE

Table I(b) on p. 206, for atom N(1) the b_{13} value should read $-106(17)$.
