The Isokinetic Relationship.

VII. Statistical Analyses and Examples for Unimolecular Reaction Systems

W. LINERT (*Vienna, Austria*)

I withdraw the data based on the normalcoordinate analyses of the nitroethylbenzoate molecule (see Section IV pp. 240/241). Prof. Dr. Bauer pointed out that these calculations are not of significance for a comparison with heat bath frequencies calculated from isokinetic temperatures and that he had not given his assent for publication of his data in this paper.
